Families And The Energy Transition:

Families and the Energy Transition John Byrne, David A. Schulz, Marvin B. Sussman, 2019-06-26 Originally published in 1985 This volume on household energy conditions considers the energy crisis in the United States and offers an important appraisal of the future of energy consumption by families and the family's adaptations to decreasing energy availability The chapters in the first section investigate the cultural dimensions of energy use at the household level looking at attitudes and trends The second section considers energy policy especially conservation with a special chapter on elderly households while the third presents case studies and projections of the future patterns and changes in energy consumption This is a fascinating snapshot of thinking on families and the effects of energy use The Urban Household Energy Transition

Douglas F. Barnes, Kerry Krutilla, William F. Hyde, 2010-09-30 As cities in developing countries grow and become more prosperous energy use shifts from fuelwood to fuels like charcoal kerosene and coal and ultimately to fuels such as liquid petroleum gas and electricity Energy use is not usually considered as a social issue Yet as this book demonstrates the movement away from traditional fuels has a strong socio economic dimension as poor people are the last to attain the benefits of using modern energy The result is that health risks from the continued use of wood fuel fall most heavily on the poor and indoor pollution from wood stoves has its greatest effect on women and children who cook and spend much more of their time indoors Barnes Krutilla and Hyde provide the first worldwide assessment of the energy transition as it occurs in urban households drawing upon data collected by the World Bank Energy Sector Management Assistance Programme ESMAP From 1984 2000 the program conducted over 25 000 household energy surveys in 45 cities spanning 12 countries and 3 continents Additionally GIS mapping software was used to compile a biomass database of vegetation patterns surrounding 34 cities Using this rich set of geographic biological and socioeconomic data the authors describe problems and policy options associated with each stage in the energy transition The authors show how the poorest are most vulnerable to changes in energy markets and demonstrate how the collection of biomass fuel contributes to deforestation Their book serves as an important contribution to development studies and as a guide for policymakers hoping to encourage sustainable energy markets and an improved quality of life for growing urban populations **Families and Adoption** Harriet Gross, Marvin B

Hanks, Marvin B. Sussman, 1990 *Corporations, Businesses and Families* offers a comprehensive look at the relationship between family systems and work organizations. Discussions ranging from work family issues of the past such as the decline of the role of the family in the workplace during the rise of labor unions to current trends toward increased corporate provision of child care introduce a historical overview of the changes in work family relationships from various perspectives. Special topics of interest include methodological strategies for researchers investigating work family issues within the corporation, perspectives of minority families in corporate work settings and family responsiveness in military organizations. In addition to examining the relationship between the corporation and the families of its employees, the authors explore the systems of management and succession in family run corporations and businesses and the family business aspects of teleministries. Researchers, students, human resource managers and business policymakers will benefit from the information in this authoritative new book. The trends and issues identified in this illuminating volume will be useful in planning corporate initiatives that affect families and in training students in business and social science programs where work family issues are of interest.
