

FAMILY (SOCIOLOGY)

DEFINITION

Family refers to a social group characterized by common residence, economic cooperation, and reproduction. It consists of individuals bound by kinship—either through blood, marriage, or adoption—who share a commitment to one another. The structure of a family unit can vary widely across cultures, time periods, and individual experiences.

COMMON TYPES

- Nuclear or conjugal (a wife, a husband, and their children)
- matrifocal (a mother and her children)
- patrifocal (a father and his children)
- extended families (parents, grandparents, children, aunts, uncles, and so on)

Family and School Capital: Towards a Context Theory of Students' School Outcomes K. Marjoribanks, 2013-03-14

One of the persistent challenges confronting societies is how to reduce inequalities in the educational and occupational attainment of students from different socio economic ethnic and race group backgrounds This book represents a major advance in examining such educational problems From an analysis of international investigations of family and school influences a context theory of students school outcomes is developed This work brings together wonderful summaries of research and adds new insights from the author's own investigations One of its substantial attributes is that it integrates qualitative and quantitative research orientations and methodologies which is a major step forward in educational and social science research A set of family and school measures is included that might be used by researchers and students as they examine the context theory and by educators involved in school reform programs This book will have a great appeal not only for students and researchers in educational fields but also for scholars in many other social science disciplines **Exploring**

Family Relationships With Other Social Contexts Ross D. Parke, Sheppard G. Kellam, 2013-07-04 In the 1990s it is no longer news that families do not operate independently from other social organizations and institutions Instead it is generally recognized that families are embedded in a complex set of relationships with other institutions and contexts outside the family In spite of this recognition a great deal remains to be discovered about the ways in which families are influenced by these outside agencies or how families influence the functioning of children and adults in these extra familial settings school work day care or peer group contexts Moreover little is known about the nature of the processes that account for this mutual influence between families and other societal institutions and settings The goal of this volume is to present examples from a series of ongoing research programs that are beginning to provide some tentative answers to these questions The result of a summer workshop characterized by lively exchanges not only between speakers and the audience but among participants in small group discussions as well this volume attempts to communicate some of the dynamism and excitement that was evident at the conference In the final analysis this book should stimulate further theoretical and empirical advances in understanding how families relate to other contexts **Learning in Social Context: The Nature and Profit of Living in Groups for**

Development Ildikó Király, David Buttelmann, 2017-05-25 One of the distinctive features of humans is their unique sociality Humans live in organized societies that are characterized by a high level of interdependence of group members in various aspects of life ranging from the economic phenomenon of labour division to providing emotional support to others Under these circumstances the capacity to track social connections within and between groups has great adaptive value in managing everyday life We may understand the importance and adaptive value of tracking the scope of culturally shared knowledge if we consider the importance of cultural norms in guiding behaviour To become a competent member of their cultural group one must be able to conform to the group's specific behavioural norms and to accumulate culturally shared

knowledge Acquiring this knowledge is essential for successful social interactions In contrast to current dominant explanatory theories emphasizing that social category formation is simply rooted in humans need to belong and affiliate with a group the aim of this e book is to provide evidence that in addition to its affiliative role children form social categories for epistemic purposes We show that children use specific cues like kinship patterns of resource allocation and consensus to understand group cohesion Section 1 Once children figured out who is in group and who is out group they show a significant in group bias in attention acting and learning Section 2 Yet this in group bias can be attenuated by induced synchronous behavior Section 3

The Social Context of Health and Health Work Linda J. Jones,1994-07-19 The Social Context of Health and Health Work breaks new ground by linking together sociology of health and social policy perspectives Linda Jones argues that health and health work cannot be understood in isolation Patterns of disease illness treatment and provision are crucially influenced by class race gender age and disability Conflicts over health policies reflect fundamental debates about the purpose of welfare The writer draws on her specialist knowledge of developing and teaching nursing and health studies courses and on her recent experience of writing distance learning materials to create a book which encourages critical thinking and supports study

Psychology and Mental Health William E. Martin, Jr., Jody L. Swartz-Kulstad, William E. Martin, 2000-03 In recent years mental health professionals who have traditionally focused on the emotional state of the individual have come to realize that problems arise from the unique interactions between particular individuals and environments. From necessity they are beginning to look at context; no longer can they place the responsibility for mental health on the shoulders of the person alone. Most attention has been paid to the impact of educational and work settings, but it is clear that all life settings contribute meaningfully to positive psychological adaptation and must be considered in any attempt to understand a person's difficulties. This book explores the crucial ramifications of new theory and research in person-environment psychology for assessment and intervention. All practitioners seeking to deliver effective mental health services to adolescents and adults will learn from it.

Black Intimacies Shirley Ann Hill, 2005 In *Black Intimacies: A Gender Perspective on Families and Relationships* Shirley A. Hill applies a gender lens to the multiple systems of oppression that have shaped the lives of African American women and men. She challenges the image of a monolithic black population, a legacy of the civil rights movement that she argues is impossible to sustain in the postmodern era. Through a critique of intersectionality theory, Hill examines the ways in which gender has affected experiences of intimacy, family relationships, child rearing, and motherhood for contemporary African Americans. Drawing on ethnographic material, interviews, and scholarly research, Hill's work rethinks the cultural and historical definitions of black identity and reconceptualizes the various forms of oppression faced by black women. This book will be useful to students and instructors of African American Studies, Gender Studies, Sociology, Anthropology, Marriage and Family, and Social Work.
