Contemporary Approaches to Neuropsychological Assessment Gerald Goldstein, Theresa M. Incagnoli, 2013-06-29 This volume reflects in part an update of Clinical Application of Neuropsychological Test Batteries edited by Theresa Incagnoli Gerald Goldstein and Charles Golden some 10 years ago While the initial concept of the present editors involved doing a straightforward update of each chapter it soon became apparent that the field of clinical neuropsychology had changed so dramatically and rapidly that substantial changes in the outline had to be made It was our view that sufficient

interest remained in the standard comprehensive neuropsychological test batteries to make an update worthwhile. We asked four senior people to take on this assignment: James Moses Jr and Arnold Purisch in the case of the Luria Nebraska Battery and James Reed and Homer Reed for the Halstead-Reitan Battery. These individuals all have long-term associations with these procedures and can be viewed as pioneers in their development. However, it also seemed to us that there was an increasing interest in the psychometric aspects of the standard procedures and in assessment issues related to the relative merits of using standard or individualized assessment strategies. Thus, we have chapters by Elbert Russell and Gerald Goldstein that provide discussions of these current methodological and clinical issues. During the past 10 years, the cognitive revolution has made a strong impact on neuropsychology. The interest of cognitive psychologists in brain function has increased dramatically, and we now have an active field of cognitive neuropsychology, something that was only beginning 10 years ago.

Clinical Neuropsychology and Cost Outcome Research George Prigatano, Neil Pliskin, 2020-03-27

Neuropsychologists are being increasingly called upon to demonstrate the value of their services. This edited book introduces clinical neuropsychologists to the concepts and challenges involved in conducting cost outcome research. It provides examples of how such research can be conducted within clinical neuropsychology and therefore is a beginning step in what must become an interdisciplinary effort. The text suggests that more than cost effectiveness studies should be considered when demonstrating the clinical utility of neuropsychological services. The concept of objective and subjective markers of value is emphasized particularly as it relates to measuring the impact of a neuropsychological examination. Chapters review the economic burdens associated with different neurological conditions commonly seen by neuropsychologists. They also provide examples of how clinical neuropsychological services to different patient populations may reduce costs and increase benefits and suggest directions for beginning cost outcome research. Furthermore, the book summarizes the utility of various neuropsychological services that may be helpful to readers concerned with healthcare economics. The book is intended as a resource for clinical neuropsychologists who wish to explain to healthcare providers the value of their work. It is the first book of the National Academy of Neuropsychology book series entitled Neuropsychology: Scientific Bases and Clinical Application.

Neuropsychotherapy and Community Integration Tedd Judd, 2012-12-06
The first time I walked onto a neurology ward during my graduate training, I was shocked. Much as family members of people with brain illnesses probably are, I had learned a great deal in class about aphasia, amnesia, agnosia, apraxia, and other cognitive disorders, but I had not been prepared for the behavioral disorders I was to encounter, for the severe physical disabilities, for the indignities of the patient role. Bit by bit, I overcame this shock. I learned to look people in the eye who seemed to have more tubes than the New York subway system, people whose faces had been scraped off the pavement and who were drooling incontinent and severely dysarthric. I learned to see beyond what frightened and repulsed me to the human beings within. I wish I could say that I saw in each person a deep human soul yearning to breathe free and to love, an essence, an intrinsic goodness, a wholeness. I did not

Rather it seems like each and every unique element of human behavior one's abilities and one's desires can be destroyed by some brain lesion while leaving a uniquely human person behind. Not only are there losses but behaviors emerge at times that are not seen in people with intact brains but which still reveal a human attempting to cope. I do feel that I saw and still see in each such person something intrinsically human but not the same thing in each.

The Practice of Forensic Neuropsychology Robert J. McCaffrey, Arthur D. Williams, Jerid M. Fisher, Linda C. Laing, 2004-05-31 The Practice of Forensic Neuropsychology focuses the awareness of neuropsychologists on the critical areas of forensic practice that should be considered during each phase of a scientific neuropsychological examination investigation. Written by three eminent neuropsychologists and a seasoned attorney, this important book contains practical information and guidelines for conducting valid and reliable forensic neuropsychological examinations that aid the trier of fact in both civil and criminal settings. The authors also include vital information to help attorneys evaluate neuropsychological claims put forth by their own or opposing experts.

Practitioner's Guide to Evaluating Change with Neuropsychological Assessment Instruments Robert J. McCaffrey, Kevin Duff, Holly James Westervelt, 2013-11-11 The impetus for this volume began with our research in the 1980's involving serial neuropsychological evaluation with various patient populations At that

time reports on the practice effects associated with routinely utilized clinical neuropsychological instruments were sparse. While test retest data were available for almost all assessment instruments this was usually in the form of correlation coefficients and not changes in mean performance between or across assessment periods see McCaffrey Westervelt 1995 for a detailed discussion of these and related issues. Clinical neuropsychological practitioners had few guidelines to assist them in determining if a change in a patient's performance across assessments was due to an intervention maturation practice effects or a combination of factors. This volume represents our efforts at reviewing the literature between 1970 and 1998 and extracting the reported information on practice effects. The tables include the assessment instrument used information on the subject patient groups the sample size n gender age intervention interval between the assessments scores at both assessment points and the citation. Those studies that reported data on more than two assessment points are indicated by a notation however any data beyond the second assessment are not reported and the interested reader should refer to the original article. The tables are arranged alphabetically for the most widely used assessment instruments. Those instruments for which there was limited data on practice effects are grouped by domain e.g.

Brain Injury and the Family Arthur Dell Orto, Paul Power, 2000. Conceived and written by two of the country's leading authorities on the relationship of head injury and family matters this book opens the frequently locked doors to accessible information. The format is a combination of original material personal statements by survivors and their families and structured experiences. The revision will retain its central theme of family oriented treatment with a rehabilitative perspective.
