Family Assessment: Rationale, Methods and Future Directions Theodore Jacob, Daniel L. Tennenbaum, 2013-11-21 The purpose of this book is to review existing and developing family assessment methods relevant to the study of psychopathology. It is our intention not only to inform clinical researchers of the many valuable family assessment methods that are available but also to encourage the incorporation of such procedures into future research efforts. In so doing, we believe that our understanding of the etiology, course, treatment, and prevention of adult and childhood disorders will be greatly enriched. The book begins with an overview of the larger social and intellectual forces which have led to the current interest in studying family influences on psychopathology in children and adolescence. For each stream of influence, we attempt to highlight theoretical and methodological contributions relevant to the family's role in the etiology, exacerbation, and treatment of childhood disorders. Next, a framework for classifying family measurement procedures is introduced, in which three major dimensions are emphasized: unit of analysis, source of data, and construct assessed. The third and most important chapter provides detailed reviews of a selected number of methods within each of the major groupings that have been delimited, references, and brief descriptions of other measures that cannot be reviewed in detail, and a discussion of the promising and developing techniques that are known to the authors.
