Creating Place in Early Modern European Architecture Elizabeth Merrill, 2025-10-01 The importance of place as a unique spatial identity has been recognized since antiquity. Ancient references to the genius loci or spirit of place evoked not only the location of a distinct atmosphere or environment but also the protection of this location and implicitly its making and construction. This volume examines the concept of place as it relates to architectural production and building knowledge in early modern Europe 1400-1800. The places explored in the book's ten essays take various forms from an individual dwelling to a cohesive urban development to an extensive political territory. Within the scope of each study, the authors draw on primary source documents and original research to demonstrate the distinctive features of a given architectural place and how these are related to a geographic location, social circumstances, and the contributions of individual practitioners. The essays underscore the distinct techniques, practices, and organizational structures by which physical places were made in the early modern period. An inquiry on place making and architectural production in early modern Europe 1400-1750. Interdisciplinary methodology and critical approaches. Thematic study that draws together subjects from throughout early modern Europe **Publication**, 1991 *Cumulative List of Organizations Described in Section 170 (c) of the Internal Revenue Code of 1986*, 1988 *The Routledge Handbook of Second Home Tourism and Mobilities* C. Michael Hall, Dieter Müller, 2018-04-17 Second homes have become an increasingly important component of both tourism and housing studies. They can directly and indirectly contribute a significant number of domestic and international visitors to destinations and may be part of longer-term retirement lifestyle and amenity migration that can have significant economic and social effects on communities and destination development. This volume offers an overview of different disciplinary and methodological approaches to second homes while simultaneously providing a broad geographical reach. Divided into four parts exploring governance, development, community, and mobile second homes, the book provides a contemporary account of the major issues in an area of growing international interest. This timely handbook covers a wide range of dimensions from planning to the

role of second homes in development and the management of their impact The international and cross disciplinary nature of the contributions will be of interest to numerous academic fields in the social sciences as well as urban and regional planners
