What If? Building Students' Problem-Solving Skills Through Complex Challenges Ronald A. Beghetto ,2018-08-28 If a fundamental goal of schooling is to prepare young people for the unknowable future why do we assign students so many clearly defined tasks with predetermined solutions According to educator and creativity expert Ronald A Beghetto the best way to unleash students problem solving and creativity and thus prepare them to face real world problems is to incorporate complex challenges that teach students to respond productively to uncertainty In this thought provoking book Beghetto explains How to foster possibility thinking to help students open up their thinking in creative sometimes counterintuitive ways The process of lesson unplanning a way of transforming existing lessons activities and assignments into more complex classroom challenges Four basic action principles that teachers and students can use to design and solve complex challenges both inside and outside the classroom The steps for creating legacy challenges which require students to identify a problem develop a solution and ensure that their work makes a lasting contribution With planning forms and detailed sample activities this practical guide will enable teachers at every grade level to design a full range of challenges in any subject area Invite uncertainty into your classroom and discover what your students are capable of

Cognitive and Metacognitive Problem-Solving Strategies in Post-16 Physics Ronald Mazorodze, Michael J. Reiss, 2019-09-20 This book reports on a study on physics problem solving in real classrooms situations Problem solving plays a pivotal role in the physics curriculum at all levels However physics students performance in problem solving all too often remains limited to basic routine problems with evidence of poor performance in solving problems that go beyond equation retrieval and substitution Adopting an action research methodology the study bridges the research practical divide by explicitly teaching physics problem solving strategies through collaborative group problem solving sessions embedded within the curriculum Data were collected using external assessments and video recordings of individual and collaborative group problem solving sessions by 16 18 year olds The analysis revealed a positive shift in the students problem solving patterns both at group and individual level Students demonstrated a deliberate well planned deployment of the taught strategies The marked positive shifts in collaborative competences cognitive competences metacognitive processing and increased self efficacy are positively correlated with attainment in problem solving in physics However this shift proved to be due to different mechanisms triggered in the different students *Advances in Cognitive Load Theory* Sharon Tindall-Ford, Shirley Agostinho, John Sweller, 2019-06-21 Cognitive load theory uses our knowledge of how people learn think and solve problems to design instruction In turn instructional design is the central activity of classroom teachers of curriculum designers and of publishers of textbooks and educational materials including digital information Characteristically the theory is used to generate hypotheses that are tested using randomized controlled trials Cognitive load theory rests on a base of hundreds of randomized controlled trials testing many thousands of primary and secondary school children as well as adults That research has been conducted by many research groups from around the world and has resulted in a wide range of novel instructional procedures that have been tested for effectiveness Advances in Cognitive Load Theory in describing current research continues in this tradition Exploring a wide range of instructional issues dealt with by the theory it covers all

Cognitive Load Theory Fred Paas, Alexander Renkl, John Sweller, 2016-02-04 The papers of this special issue demonstrate that cognitive load theory provides the framework for investigations into cognitive processes and instructional design The genesis of Cognitive Load Theory emerged from an international symposium organized at the bi annual conference of the European Association for Research on Learning and Instruction in 2001 in Fribourg Switzerland Most of the papers are based on contributions to that symposium and discuss the most recent work carried out within the cognitive load framework As a whole this issue is demonstrating that cognitive load theory is continuing its role of using cognitive psychology principles to generate novel instructional design procedures

Implementation Research on Problem Solving in School Settings Inga Gebel, 2019 Content of the Book The University of Potsdam hosted the 25th ProMath and the 5th WG Problem Solving conference Both groups met for the second time in this constellation which contributed to profound discussions on problem solving in each country taking cultural particularities into account The joint conference took place from 29th to 31st August 2018 with participants from Finland Germany Greece Hungary Israel Sweden and Turkey The conference revolved around the theme Implementation research on problem solving in school settings These proceedings contain 14 peer reviewed research and practical articles including a plenary paper from our distinguished colleague Anu Laine In addition the proceedings include three workshop reports which likewise focused on the conference theme As such these proceedings provide an overview of different research approaches and methods in implementation research on problem solving in school settings which may help close the gap between research and practice and consequently make a step forward toward making problem solving an integral part of school mathematics on a large scale Content PLENARY REPORT Anu Laine How to promote learning in problem solving pp 3 18 This article is based on my plenary talk at the joint conference of ProMath and the GDM working group on problem solving in 2018 The aim of this article is to consider teaching and learning problem solving from different perspectives taking into account the connection between 1 teacher's actions and pupils' solutions and 2 teacher's actions and pupils' affective reactions Safe and supportive emotional atmosphere is base for students learning and attitudes towards mathematics Teacher has a central role both in constructing emotional atmosphere and in offering cognitive support that pupils need in order to reach higher level solutions Teachers need to use activating guidance i.e. ask good questions based on pupils' solutions Balancing between too much and too little guidance is not easy https://doi.org/10.37626/GA9783959871167_001 RESEARCH REPORTS AND ORAL COMMUNICATIONS Lukas Baumanns and Benjamin Rott Is problem posing about posing problems A terminological framework for researching problem posing and problem solving pp 21 31 In this literature review we critically compare different problem posing situations used in research studies This review reveals that the term

problem posing is used for many different situations that differ substantially from each other. For some situations it is debatable whether they provoke a posing activity at all. For other situations we propose a terminological differentiation between posing routine tasks and posing non routine problems. To reinforce our terminological specification and to empirically verify our theoretical considerations we conducted some task based interviews with students. <https://doi.org/10.37626/GA9783959871167.0.02> Kerstin Bruning Long term study on the development of approaches for a combinatorial task pp 33-50. In a longitudinal research project over two years we interviewed children up to 6 times individually to trace their developmental trajectories when they solve several times the same tasks from different mathematical areas. As a case study I will present the combinatorial task and analyze how two children a girl and a boy over two years approached it. As a result of the case studies we can see that the analysis of the data product oriented or process oriented provides different results. It is also observable that the developmental trajectory of the girl is a more continuous learning process which we cannot identify for the boy. <https://doi.org/10.37626/GA9783959871167.0.03> Lars Burman Developing students problem solving skills using problem sequences Student perspectives on collaborative work pp 51-59. Using problem solving in mathematics classrooms has been the object of research for several decades. However it is still necessary to focus on the development of problem solving skills and in line with the recent PISA assessment more attention is given to collaborative problem solving. This article addresses students collaborative work with problem sequences as a means to systematically develop students problem solving skills. The article offers student perspectives on challenges concerning the social atmosphere differentiation on teaching and learning in cooperation. In spite of the challenges the students experiences indicate that the use of problem sequences and group problem solving can be fruitful in mathematics education. <https://doi.org/10.37626/GA9783959871167.0.04> Alex Friedlander Learning algebraic procedures through problem solving pp 61-69. In this paper I attempt to present several examples of tasks and some relevant findings that investigate the possibility of basing a part of the practice oriented tasks on higher level thinking skills that are usually associated with processes of problem solving. The tasks presented and analysed here integrate problem solving components namely reversed thinking expressing and analysing patterns and employing multiple solution methods into the learning and practicing of algebraic procedures such as creating equivalent expressions and solving equations. <https://doi.org/10.37626/GA9783959871167.0.05> Thomas Gawlick and Gerrit Welzel Backwards or forwards Direction of working and success in problem solving pp 71-89. We pose ourselves the question What can one infer from the direction of working when solvers work on the same task for a second time. This is discussed on the basis of 44 problem solving processes of the TIMSS task K10. A natural hypothesis is that working forwards can be taken as evidence that the task is recognized and a solution path is recalled. This can be confirmed by our analysis. A surprising observation is that when working backwards pivotal for success is in case of K10 to change to working forwards soon after reaching the barrier. <https://doi.org/10.37626/GA9783959871167.0.06> Inga Gebel Challenges in teaching problem solving

Presentation of a project in progress by using an extended tetrahedron model pp 91 109 In order to implement mathematical problem solving in class it is necessary to consider many different dimensions the students the teacher the theoretical demands and adequate methods and materials In this paper an implementation process is presented that considers the above dimensions as well as the research perspective by using an extended tetrahedron model as a structural framework In concrete terms the development and initial evaluation of a task format and a new teaching concept are presented that focus on differentiated problem solving learning in primary school The pilot results show initial tendencies towards possible core aspects that enable differentiated problem solving in mathematics teaching <https://doi.org/10.37626/GA9783959871167.0.07>

Heike Hagelgans Why does problem oriented mathematics education not succeed in an eighth grade An insight in an empirical study pp 111 119 Based on current research findings on the possibilities of integration of problem solving into mathematics teaching the difficulties of pupils with problem solving tasks and of teachers to get started in problem solving this article would like to show which concrete difficulties delayed the start of the implementation of a generally problem oriented mathematics lesson in an eighth grade of a grammar school The article briefly describes the research method of this qualitative study and identifies and discusses the difficulties of problem solving in the examined school class In a next step the results of this study are used to conceive a precise teaching concept for this specific class for the introduction into problem oriented mathematics teaching <https://doi.org/10.37626/GA9783959871167.0.08>

Zolt n Kov cs and Eszter K nya Implementing problem solving in mathematics classes pp 121 128 There is little evidence of teachers are using challenging problems in their mathematics classes in Hungary At the University of Debrecen and University of Ny regyh za we elaborated a professional development program for inservice teachers in order to help them implementing problem solving in their classes The basis of our program is the teacher and researcher collaboration in the lessonplanning and evaluation In this paper we report some preliminary findings concerning this program <https://doi.org/10.37626/GA9783959871167.0.09>

Ana Kuzle Campus school project as an example of cooperation between the University of Potsdam and schools pp 129 141 The Campus School Project is a part of the Qualit tsoffensive Lehrerbildung project whose aim is to improve and implement new structures in the university teacher training by bringing all the essential protagonists namely university stuff preservice teachers and in service teachers together and having them work jointly on a common goal The department of primary mathematics education at the University of Potsdam has been a part of the Campus School Project since 2017 Thus far several cooperations emerged focusing on different aspects of problem solving in primary education Here I give an overview of selected cooperations and the first results with respect to problem solving research in different school settings <https://doi.org/10.37626/GA9783959871167.0.10>

Ioannis Papadopoulos and Aikaterini Diakidou Does collaborative problem solving matter in primary school The issue of control actions pp 143 157 In this paper we follow three Grade 6 students trying to solve at first individually and then in a group arithmetical and geometrical problems The focus of the study is to identify and

compare the various types of control actions taken during individual and collaborative problem solving to show how the collective work enhances the range of the available control actions At the same time the analysis of the findings give evidence about the impact of the collaborative problemsolving on the way the students can benefit in terms of aspects of social metacognition <https://doi.org/10.37626/GA9783959871167.0.11> Sarina Scharnberg Adaptive teaching interventions in collaborative problem solving processes pp 159 171 Even though there exists limited knowledge on how exactly students acquire problem solving competences researchers agree that adaptive teaching interventions have the potential to support students autonomous problem solving processes However most recent research aims at analyzing the characteristics of teaching interventions rather than the interventions effects on the students problem solving process The study in this paper addresses this research gap by focusing not only on the teaching interventions themselves but also on the students collaborative problem solving processes just before and just after the interventions The aim of the study is to analyze the interventions effect on the learners integrated problem solving processes <https://doi.org/10.37626/GA9783959871167.0.12> Nina Sturm Self generated representations as heuristic tools for solving word problems pp 173 192 Solving non routine word problems is a challenge for many primary school students A training program was therefore developed to help third grade students to find solutions to word problems by constructing external representations e g sketches tables and to specifically use them The objective was to find out whether the program positively influences students problemsolving success and problem solving skills The findings revealed significant differences between trained and untrained classes Therefore it can be assumed that self generated representations are heuristic tools that help students solve word problems This paper presents the results on the impact of the training program on the learning outcome of students <https://doi.org/10.37626/GA9783959871167.0.13> Kinga Sz cs Problem solving teaching with hearing and hearing impaired students pp 193 203 In the last decade the concept of inclusion has become more and more prevalent in mathematics education especially in Germany Accordingly teachers in mathematics classrooms have to face a wide range of heterogeneity which includes physical sensory and mental disabilities At the Friedrich Schiller University of Jena within the framework of the project Media in mathematics education it is examined how new technologies can support teaching in inclusive mathematics classrooms In the academic year 2017 18 the heterogeneity regarding hearing impairment was mainly focussed on Based on a small case study with hearing and hearing impaired students a problem solving unit about tangent lines was worked out according to P ly a which is presented in the paper <https://doi.org/10.37626/GA9783959871167.0.14> WORKSHOP REPORTS Ana Kuzle and Inga Gebel Implementation research on problem solving in school settings A workshop report 207 On the last day of the conference we organized a 90 minute workshop The workshop focused on the conference theme Implementation research on problem solving in school settings Throughout the conference the participants were invited to write down their questions and or comments as a response to held presentations <https://doi.org/10.37626/GA9783959871167.0.15> Ana Kuzle Inga Gebel and Anu
