Elastic Tissues Derek J. Chadwick, Jamie A. Goode, 2008-04-30 Drawing together contributions from a diverse group of international experts in the field this collection of papers examines the biology and pathology of elastin at the molecular level Topics include the structure ultrastructure and function of elastin elastin regulation elastin's role in aging lung development and disease and atherosclerosis as well as related aspects of pharmacology and nutrition **Regulation of matrix**

Accumulation ,2012-12-02 Regulation of Matrix Accumulation discusses the development of research and studies on connective tissue This book emphasizes biochemical characterization of individual connective tissue components and interactions between cells and extracellular macromolecules Other topics include the intracellular turnover of collagen biological regulation of collagenase activity feedback regulation of collagen synthesis steroid hormone regulation of extracellular matrix proteins and control of elastin synthesis including its molecular and cellular aspects The catalytic and biological properties of elastases characterization and regulation of lysyl oxidase and matrix accumulation and the development of form considering proteoglycans and branching morphogenesis are explained as well Included in this text is an autobiography and personal retrospective by Miles Partridge one of the contributors that greatly influenced the progress in understanding extracellular matrix biology This publication is a good reference for students and researchers conducting work on biology specifically on connective tissue

Biochemistry of Pulmonary Emphysema C. Grassi,J. Travis,L. Casali,M. Luisetti,2013-11-11 Pulmonary emphysema is a disease which develops because of a localized imbalance between endogenous proteinase inhibitors and proteinases leaking from neutrophils during phagocytosis at inflammatory foci within the lung This volume not only reviews at a biochemical level what is known about the natural inhibitors and proteinases involved in connective tissue destruction within the lung but also suggests novel methodologies for reestablishing proper enzyme inhibitor balance including the use of natural or synthetic inhibitors for supplementation or gene therapy

Handbook of Proteolytic Enzymes, Volume 1 Alan J. Barrett,J. Fred Woessner,Neil D. Rawlings,2012-12-02 Handbook of Proteolytic Enzymes Second Edition Volume 1 Aspartic and Metallo Peptidases is a compilation of numerous progressive research studies on proteolytic enzymes This edition is organized into two main sections encompassing 328 chapters This handbook is organized around a system for the classification of peptidases which is a hierarchical one built on the concepts of catalytic type clan family and peptidase The concept of catalytic type of a peptidase depends upon the chemical nature of the groups responsible for catalysis The recognized catalytic types are aspartic cysteine metallo serine threonine and the unclassified enzymes while clans and families are groups of homologous peptidases Homology at the level of a family of peptidases is shown by statistically significant relationship in amino acid sequence to a representative member called the type example or to another member of the family that has already been shown to be related to the type example Each chapter discusses the history activity specificity structural chemistry preparation and biological aspects of the enzyme This book will prove useful to enzyme chemists and researchers

Virulence and Gene Regulation Juan-Luis Ramos,2012-12-06 Pseudomonas comprises three volumes covering the biology of pseudomonads in a wide context including the niches they inhabit the taxonomic relations among members of this group the molecular biology of gene expression in different niches and under different environmental conditions the analysis of virulence traits in plants animals and human pathogens as well as the determinants that make some strains useful for biotechnological applications and promotion of plant growth There has

been growing interest in pseudomonads and a particular urge to understand the biology underlying the complex metabolism of these ubiquitous microbes. These bacteria are capable of colonizing a wide range of niches including the soil, the plant rhizosphere and phyllosphere and animal tissues. More recently they have attracted attention because of their capacity to form biofilms, a characteristic with potentially important medical and environmental implications. The three volumes cover the following topics: Taxonomy, Genomics, Life styles, Cell Architecture, Virulence, Regulation, Macromolecules, Alternative Respiratory Substrates, Catabolism and Biotransformations. *Pseudomonas* will be of use to all researchers working on these bacteria, particularly those studying microbiology, plant crops, pathogenesis and chemical engineering. Advanced students in biology, medicine and agronomy will also find these three volumes a valuable reference during their studies. Cellular Biology of the Lung C. Cummings, Gordon Cumming, G. Bonsignore, 2013-03-09. This volume records the proceedings at the Fifth School of Thoracic Medicine held at the Ettore Majorana School of International Scientific Culture in March 1981. Foregathered there were a heterogeneous group comprising clinicians, pathologists, ultra microscopists, biochemists, immunologists, cellular biologists and physiologists and they presented the twenty seven papers seen in the contents list. The discussion which followed each paper was faithfully recorded and where necessary translated and may be found after each author's presentation. This free discussion is perhaps the most valuable part of the School of Thoracic Medicine and most clearly defines the present boundaries of knowledge and the directions in which enquiry is being pursued. The collaboration of many people made the production of this book possible for the translation and the discussion typescript. Miss Guiliiana de Ferio for the final typing and layout. Miss Corinne Wade ably assisted by Miss Karen Wadey and Miss Kim Lekstrom. The illustrations have been dealt with where necessary by Mr John Griffiths and the production of the book was done at The Midhurst Medical Research Institute prior to its delivery to Plenum Press.

The objective of the program committee of the Fifth International Symposium on Atherosclerosis was to bring together experts in many disciplines to broaden the scope of the attack on this disease and to foster interaction. Our hope was that such interaction would accelerate the eradication of the disease. The symposium achieved that objective and continued the tradition of the previous symposia in providing a forum for summaries of recent research developments in the study, treatment and prevention of atherosclerosis. The leading authorities and researchers in this field and in the related areas of interest have presented the newest information, concepts and ideas that have evolved in the past three years since the previous meeting in Tokyo. The most promising fields for future investigation are clearly identified as are the nature of the controversies that persist in some highly important aspects of treatment of this disease. The appearance of these proceedings so soon after the meeting will greatly enhance the impact of the symposium on current research in

atherosclerosis The program committee is particularly indebted to the excellent response of the investigators for their willingness to participate in the symposium and for their successful efforts in bringing high quality to their presentations Their cooperation in the expeditious delivery of manuscripts for this volume has been particularly gratifying The efforts of Ms Barbara Allen in preparing this volume bear special note **Alpha-1 Antitrypsin Deficiency** Thomas Köhnlein, 2007

Howard, J.D. Miller, 2013-04-17 Mycology the study of fungi originated as a subdiscipline of botany and was a descriptive discipline largely neglected as an experimental science until the early years of this century A seminal paper by Blakeslee in 1904 provided evidence for self incompatibility termed heterothallism and stimulated interest in studies related to the control of sexual reproduction in fungi by mating type

specificities Soon to follow was the demonstration that sexually reproducing fungi exhibit Mendelian inheritance and that it was possible to conduct formal genetic analysis with fungi The names Burgeff Kniep and Lindegren are all associated with this early period of fungal genetics research These studies and the discovery of penicillin by Fleming who shared a Nobel Prize in 1945 provided further impetus for experimental research with fungi Thus began a period of interest in mutation induction and analysis of mutants for biochemical traits Such fundamental research conducted largely with *Neurospora crassa* led to the one gene one enzyme hypothesis and to a second Nobel Prize for fungal research awarded to Beadle and Tatum in 1958 Fundamental research in biochemical genetics was extended to other fungi especially to *Saccharomyces cerevisiae* and by the mid 1960s fungal systems were much favored for studies in eukaryotic molecular biology and were soon able to compete with bacterial systems in the molecular arena
