Elderly People Their Medicines And Their Doctors:

Elderly People, Their Medicines, and Their Doctors Ann Cartwright, Christopher Smith, 2024-05-10 In the late 1980s an increasing proportion of all prescribed medicines went to people over 65 years of age not only because they constituted a growing sector of the population but also because their consumption rate unlike that of younger people was increasing This increase was therefore a matter for widespread concern which had until now been largely speculative as no recent national survey had focused on this issue Originally published in 1988 Ann Cartwright and Christopher Smith looked at the medicines prescribed for and taken by a nationally representative sample of elderly people The experiences and views of both patients elderly people and professionals general practitioners are examined and related What is revealed is how much and how little GPs knew about the social circumstances and medicine taking of their elderly patients Evaluation of all the prescribed medicines taken shows the extent of elderly people s knowledge of their medication and identifies duplications potentially harmful interactions contraindications and inappropriate dosages Recommendations for action to be taken by doctors pharmacists medical educators and elderly people themselves made this book essential reading for all those concerned with the health and welfare of elderly people at the time *Alternative Medicine for the Elderly* P. Cherniack, N.

Cherniack, 2013-04-18 The explosion of information about complementary and alternative medicine CAM has demanded the attention of health professionals and responsible consumers including the elderly Increasingly medical schools are providing education about CAM This book brings together for academicians and interested mainstream practitioners much of the current information on CAM and its role in the health of the elderly The individual chapters are thoroughly researched and quite readable even for patients and the lay public concerned with the state of the evidence and art supporting CAM s role in prevention and management of illness and well being This book provides educators with much necessary information needed to prepare coursework and learning activities Although definitive data are lacking regarding efficacy and even safety of CAM methodologies many chapters in this book summarize the existing evidence in a usable way The topics analyzed range from well accepted therapies such as vitamin E for dementia and zinc tablets for the common cold to far less conventional therapies such as transcendental meditation The conclusions are often surprising but well presented and defended Even the most highly controversial areas such as the use of acupuncture to treat low back pain and osteoarthritis of the knee are thoroughly and fairly reviewed Finally the chapters address some of the political issues that challenge CAM These issues include who should be allowed to practice a CAM discipline whose efficacy is not based on the scientific method and some of the state to state variations in practice standards and licensure **Drug abuse treatment** United States.
