Electric Power Challenges And Choices:

Electric Power Alan Wyatt, 1978 **Change, Challenge and Choice in the New Decade**, 1980 *Local Electricity Markets* Tiago Pinto, Zita Vale, Steve Widergren, 2021-07-03

Local Electricity Markets introduces the fundamental characteristics, needs and constraints shaping the design and implementation of local electricity markets. It addresses current proposed local market models and lessons from their limited practical implementation. The work discusses relevant decision and informatics tools considered important in the implementation of local electricity markets. It also includes a review on management and trading platforms including commercially available tools. Aspects of local electricity market infrastructure are identified and discussed, including physical and software infrastructure. It discusses the current regulatory frameworks available for local electricity market development internationally. The work concludes with a discussion of barriers and opportunities for local electricity markets in the future. Delineates key components shaping the design and implementation of local electricity market structure. Provides a coherent view on the enabling infrastructures and technologies that underpin local market expansion. Explores the current regulatory environment for local electricity markets drawn from a global panel of contributors. Exposes future paths toward widespread implementation of local electricity markets using an empirical review of barriers and opportunities. Reviews relevant local electricity market case studies, pilots and demonstrators already deployed and under implementation.

Innovation And Entrepreneurship: Choice And Challenge Otto Chui Chau Lin, 2018-02-26

This book discusses practical issues of innovation and entrepreneurship. It first outlines the basic factors contributing to economic growth in the knowledge-based economy. Portraying wealth creation as taking scientific research results from lab to market, it identifies two interlinking components of the innovation process: turning scientific research to industrial technology and nurturing an eco-system conducive to technology business. Thus, it clarifies the position and role of four institutional players of the national innovation system: university, U, technology institute, T, government, G, and business, B. Making these players interact synergistically provides a fertile environment for innovation and entrepreneurship. The development of Silicon Valley, Hsinchu, Shenzhen, and Singapore are illustrated as examples. For the technology entrepreneur, having a novel technology or unique product does not guarantee commercial success. It requires an effective business model, ability to execute business plan, and entrepreneurial culture, all related to the soft power attributes of the entrepreneur team. The competitiveness of innovation and management of entrepreneurship are analyzed based on the concepts of Laozi and Confucius. Every entrepreneurship must learn to manage the challenges brought about by the changing business environment. The competitiveness and sustainability of a business is reflected by its ability to manage the change, both in bad and in good times. Every choice it makes will bring about new challenge. This is a definite, continuous and cyclic phenomenon occurring to all types of business. Some case examples of success or failure in managing challenges are given. They include Alibaba Group, Ardentec, IC testing, Cisco Systems, Delta Electronics, Eastman Kodak, Epistar, HBLED, Fairchild Semiconductors, General

Competitive Change in the Electric Power Industry United States. Congress. Senate. Committee on Energy and Natural Resources,1997 **Investing in EU Energy Security** Henrik Bjørnebye,2010-08-27 The author of this timely and sharply focused book shows that in the light of our current knowledge ensuring new investments and the right investments in electricity generation constitutes an urgent energy policy challenge facing the EU over the coming decades He accordingly makes the case for a serious reconsideration of the market facilitation and market intervention rules under electricity market legislation in the EU In the first detailed legal analysis of the EU s internal electricity market framework for investments in electricity generation facilities from the perspective of security of supply this book cover such legal issues as the following in precise detail applicability of the Treaty on the Functioning of the European Union TFEU security of supply as a ground for exemption on the basis of public security justifications of public intervention the applicability of EU State aid provisions to investments in energy security requirements imposed by EU law on Member States for ensuring cost efficient investments in European supply security facilitation of renewable energy sources and cogeneration in the environmental interest the Court of Justice s approach to Member State interventions the Court s decisions on restrictions on free movement in the environmental interest Member States right to launch tendering procedures for new generation capacity Member States right to impose public service obligations in the general economic interest on certain undertakings and relationship between the provisions of the TFEU and those of the Euratom Treaty in relation to investments in nuclear power generation Throughout the study in addition to his analysis of the decisions of the Court of Justice and the Court of First Instance the author takes into account legal literature and Union reports preparatory works and working papers The book demonstrates convincingly that today s energy supply challenges must be based on a broader balancing of security competitiveness and sustainability interests It suggests that the internal electricity market provisions of the Electricity Directive and the Security of Electricity Supply Directive would benefit from focusing more intensely on requiring investments in technologies and primary energy sources that will help mitigate climate change and reduce European energy import dependency and less on the need for ensuring cost efficient investments through market based means **Electric Power Industry Competition Legislation** United States. Keeping the Lights on at America's Nuclear Power Plants Jeremy Carl,David Fedor,2017-08-01 In

Keeping the Lights On at America's Nuclear Power Plants Jeremy Carl and David Fedor discuss the decline of American nuclear power in light of major economic technological and political challenges They show how high costs low public support and popular clean energy trends threaten America's near and long term nuclear viability American nuclear power plants are closing at a historically unprecedented pace and there's little evidence of public or political will to stop the bleeding Recognizing the nuclear industry's flaws the authors argue that nuclear energy is widely misunderstood They discuss the nuclear industry's failure to capture the public's attention and imagination and survey the new national conversation about America's renewable energy future a conversation that does not include nuclear For all these challenges the authors argue that permanently opting out of the nuclear enterprise would be a mistake Making the case for continued nuclear investment they show how keeping the lights on at America's nuclear plants can bolster American technology leadership security and commitment to curbing carbon emissions They offer a menu of policy options designed to spur meaningful action at state and federal levels to change the industry's status quo and to reintroduce nuclear to America's energy conversation 105-1
