Electroactive Polymer Electrochemistry Michael E.G. Lyons, 2013-06-29 The development of tailor-made electrode surfaces using electroactive polymer films has been one of the most active and exciting areas of electrochemistry over the last 15 years The properties of these materials have been examined by a wide range of scientists from a variety of perspectives and now electroactive polymer research is considered to be a reasonably mature area of research endeavor Much is now understood about the fundamental mechanism of conduction in these materials A wide range of electrochemical techniques may be used to probe the conductivity processes in these materials and more recently a number of in situ spectroscopic techniques have been used to further elucidate the structure of these materials The in situ spectroscopies and allied techniques have also been used to obtain correlations between structure and redox activity The applications found for electroactive polymers are many and varied and range from thin film amperometric chemical and biological sensors electrocatalytic systems drug delivery devices and advanced battery systems through to molecular electronic devices The research literature on electroactive polymers is truly enormous and can daunt even the most hardened researcher The vast quantity of material reported in the literature can also intimidate beginning graduate students Hence the present book The original idea for this book arose as a result of a series of lectures on chemically modified electrodes and electroactive polymers given by the writer to final year undergraduates at Trinity College Dublin

Electrochemistry in Research and Development R. Kalvoda, Roger Parsons, 2012-12-06 This volume contains the papers presented at the UNESCO Scientific Forum on Chemistry in the Service of Mankind Electrochemistry in Research and Development held in Paris June 4 6 1984 Electrochemistry is concerned with the way electricity produces chemical changes and in turn chemical changes result in the production of electricity This interaction forms the basis for an enormous variety of processes ranging from heavy industry through batteries to biological phenomena Although there are many established applications modern

research has led to a great expansion in the possibilities for using electrochemistry in exciting future developments To encourage this progress UNESCO has set up an Expert Committee on Electrochemistry and its Applications in the European and North American region which has already held a number of meetings devoted to specific topics To achieve a synthesis of the main directions of development and to demonstrate the importance of these for the needs of our modern society the Expert Committee organized a Forum on Electrochemistry in Research and Development The object of this was to assess the future trends in research and development and to establish a dialogue between experts in electrochemistry and their colleagues in the many other disciplines which can make use of electrochemistry The Forum was also intended to present electrochemistry and its applications in a form accessible to non specialists so that science policy makers will be aware of the potentialities of this subject for the future needs of mankind
