Ionic Liquids: Properties and Applications Francesca D'Anna, Jason Harper, 2019-10-17 Sustainability defined as the way to meet the needs of the present generation without compromising the ability of future ones to meet their own is one of the main challenges of modern society Within this context chemistry plays a significant role and solvent nature as well as its environmental impact are pivotal issues frequently addressed Ionic liquids i.e organic salts that have melting temperatures lower than 100 °C have been frequently hailed as alternatives to conventional organic solvents Their greenness has been mainly ascribed to their low vapor pressure and flammability However in addition to this their high solubilizing ability and low miscibility with conventional organic solvents frequently allow for reducing the amount used as well as for their recycling Ionic liquids especially the ones featured by aromatic cations are frequently described as polymeric supramolecular fluids

constructed through the establishment of feeble but cooperative supramolecular interactions like Coulomb and interactions as well as hydrogen bonds In general ionic liquids are also indicated as designer solvents as it is possible to tailor their features to specific applications by simply modifying their cation or anion structure In this way small changes in the ion s structure can give rise to solvents showing very different properties The above premises widely justify the growing interest in the properties and applications of ionic liquids seen in recent literature according to Scopus more than 27 000 papers published in the last five years have ionic liquids as a keyword Thanks to their properties they have been variously used as solvent media solvents for the obtainment of gel phases components in the building of dye sensitized solar cells media for the preparation of thermochromic materials etc This Research Topic aims to present how structural features can determine not only the properties of ionic liquids but also their possible employment In this latter case the interest arises from their ability to affect the outcome of a given reaction in terms of rate yield and nature of the products obtained for general use in the field of materials chemistry This article collection is dedicated to Prof Kenneth R Seddon for his outstanding contribution to the formation and development of the ionic liquids community [Ionic Liquids in Chemical Analysis](#) Mihkel Koel,2008-10-09 An Overview of a Rapidly Expanding Area in Chemistry Exploring the future in chemical analysis research Ionic Liquids in Chemical Analysis focuses on materials that promise entirely new ways to perform solution chemistry It provides a broad overview of the applications of ionic liquids in various areas of analytical chemistry in *Electrodeposition from Ionic Liquids* Frank Endres,Andrew Abbott,Douglas R. MacFarlane,2017-02-23 Edited by distinguished experts in this expanding field and with specialist contributions this overview is the first of its kind to focus on electrodeposition from ionic liquids This second edition has been completely revised and updated with approximately 20% new content and has been expanded by five chapters to cover the following topics Bulk and Interface Theory Nanoscale Imaging including AFM In situ STM and UHV STM Impedance Spectroscopy Process Scale up including Brighteners Speciation and Redox Properties The result is essential reading for electrochemists materials scientists chemists in industry physical chemists chemical engineers inorganic and organic chemists **Ionic Liquids UnCOILed** Kenneth R. Seddon,Natalia V. Plechkova,2012-10-26 Ionic Liquids UnCOILed presents decisively important reviews on new processes and recent developments in ionic liquid technology with an emphasis on commercial applications in which ionic liquids are replacing or may replace processes currently using conventional solvents Ranging from applied to theoretical synthetic to analytical and biotechnological to electrochemical the book features eleven chapters written by an international group of key academic and industrial chemists exercising the judicious evaluation which they are uniquely qualified to do This book is a must for R D chemists in industrial governmental and academic laboratories and for commercial developers of environmentally friendly sustainable processes **Ionic Liquids in the Biorefinery Concept** Rafal Bogel-Lukasik,2016 Summarising advance in the use of ionic liquids in biomass processing this book is an important reference for researchers and practising chemists *Ionic Liquids in Synthesis*
