- Distances are measured by EDM device
- An EDM device consists of: (i) an emitter, (ii) a prism reflector and (iii) a receiver
- Emitter and receiver are built-in components of the telescope
- The emitter operates in the certain range of the **electromagnetic waves**
- Thus EDM totally related with emission, propagation, reception and reflection, and subsequent reception of some kind of electromagnetic wave

Electronic Distance Measurement Jean M. Rüeger, 2012-12-06 As the basic principles of EDM instruments have changed little since the third edition of 1990 there was no need for significant changes This edition differs from its predecessor in that it contains corrections of a number of errors and misprints totally revised tables in Appendices D E and F and a new note in Section 2 4 3 on the introduction of the new temperature scale in 1990 The author is indebted to the many readers who reported the many small errors and misprints T Black H Buchanan R Da Col R Kochle P H Lam 1 Nolton 1 R Pollard and A Quade were particularly helpful All known errors have been corrected The assistance provided by most manufacturers or their agents with the updating of the tables with the instrument data was greatly appreciated Sydney February 1996 1 M RUEGER v Preface The book has evolved from the author's continuing teaching of the subject and from two editions of a text of the same title The first edition was published in 1978 by the School of Surveying University of New South Wales Sydney Australia Like its predecessors this totally revised third edition is designed to make the subject matter more readily available to students proceeding to degrees in Surveying and related fields

**Electromagnetic Distance Measurement** International Association of Geodesy, 1967-12-15 Electromagnetic distance measurement by using light and microwaves for direct linear measurements and thus circumventing the need for traditional methods of triangulation may well introduce a new era in surveying This book brings together the work of forty eight geodesists from twenty five countries They discuss various new EDM instruments among them the Tellurometer Geodimeter and air and satellite borne systems and investigate the complex sources of error The book is therefore a unique and comprehensive source on the subject UNESCO and R I C S have assisted financially in its production

Saastamoinen,2012-12-06 The idea of writing a textbook on urban surveying and mapping originated with the Commission on Cartography of the Pan American Institute of Geography and History PAIGH because of the urgent need for planned and integrated surveying and mapping in urban communities of the American Hemisphere It is obvious however that with the exception of some European countries the same situation exists in most cities of the world The undersigned was asked to undertake the task The task was not simple The only available comprehensive text in the field 1 is Geodezja Miejska which was published recently in Poland and reached the authors only after most of the present text was written It is tailored to a very specific market and different requirements Although it is an impressive book it differs vastly from our own approach Other reference texts are fragmentary or obsolete During the last two decades revolutionary changes have occurred in surveying and mapping technology which have had a profound effect on actual procedures In addition the traditional concepts of urban surveying and mapping are undergoing rapid evolution It is recognized that administration and planning require a great variety of continuously updated information which must be correlated with the actual physical fabric of the community as determined by surveying and mapping Modern urban surveying and mapping is therefore the foundation of the broad and dynamic information system that is indispensable in any rational municipal effort      Electromagnetic Distance Measurement International Association of Geodesy,1967
