Biofeedback training is a research methodology and training procedure through which people can learn voluntary control over their internal physiological systems It is a merger of multiple disciplines with interest deriving from many sources from basic understanding of psychophysiology to a desire for enhanced self awareness The goals of biofeedback are to develop an increased awareness of relevant internal physiological functions to establish control over these functions to generalize control from an experimental or clinical setting to everyday life and to focus attention on mind body integration Biofeedback is explored in many different settings In the university biofeedback equipment and applications can be found in the departments of experimental and clinical psychology counseling physiology biology education and the theater arts as well as in the health service student infirmary Outside the university biofeedback may be found in different departments of hospitals such as physical medicine private clinics education and self awareness groups psychotherapy practices and elsewhere Its growth is still expanding and excitement is still rising as a result of biofeedback's demonstration that autonomic functions can be brought under voluntary control and that the long standing artificial separation between mind body and

the main volume and at least to sample the Appendix to see the kinds of information that can be mined from it When patients are satisfied with a new treatment and seem to be improved by it why bother with any additional evaluation The reason is that history has shown over and over again that new forms of treatment initially can be used enthusiastically for many conditions with apparent success only to have the pendulum swing in the opposite direction from overenthusiasm to complete disillusionment
