## **Abstract**

A single a case of malignant triton tumor, presented as a neck mass in a 34 year old female diagnosed solely by fine needle aspiration, is reported. The diagnosis was supported by immunohistochemical staining and electron microscopic examination that showed evidence of both schwannian and rhabdomyoblastic differentiation. Cell image analysis was also performed on the case and showed an aneuploid peak with a DNA index of 1.7. Diagnosing rare tumors with fine needle aspiration is feasible; particularly with the help of ancillary studies.

*FNA Cytology of Soft Tissue and Bone Tumors* H. A. Domanski, C. S. Walther, 2017-07-27 Fine needle aspiration cytology (FNAC) has been commonly used to follow up on previously treated sarcomas or to confirm soft tissue and bone metastases of carcinomas, melanomas or lymphomas. Its role as the first line approach in the diagnosis of primary soft tissue and bone tumors has increased due to progress of less invasive diagnostic procedures and the growing availability of diagnostic ancillary tests. This comprehensive and richly illustrated volume presents cytomorphology of all common neoplastic soft tissue and bone lesions but also of rare tumors largely described in case reports. Key points for cytological features, differential diagnosis and the use of ancillary tests are discussed and illustrated in order to facilitate the diagnostic work up in FNA samples. The volume is organized on the basis of the most recent WHO classification used in surgical pathology in order to provide a practical guide for modern cytologic diagnosis of surgical soft tissue and bone pathology. It is aimed mainly at surgical pathologists and cytopathologists but also at orthopedic surgeons and clinical oncologists.

*Handbook of Practical Fine Needle Aspiration and Small Tissue Biopsies* Fan Lin, Haiyan Liu, Jun Zhang, 2017-09-01 This handbook has been designed to provide a comprehensive and state of the art review and update of the major issues and challenges specific to fine needle aspiration (FNA) and small tissue core biopsies which have emerged as primary modalities in establishing a definitive cancer diagnosis in the field of anatomic pathology both in the U S and worldwide. Making an accurate diagnosis from a limited sample can be quite challenging yet crucial to patient care. The handbook using the most current and evidence based resources will 1 emphasize a triple test (clinical, radiologic and cytologic/histologic correlation) 2 stress the importance of cellblock preparation 3 small tissue core biopsy in modern cytopathology 3 include over 100 diagnostic immunostaining panels/tables to address the utility and importance of ancillary studies 4

incorporate relevant FISH and molecular tests into each chapter and 5 summarize the pearls and pitfalls of FNA small tissue biopsies at the beginning of each chapter The book also includes highly practical presentations of typical case scenarios seen in an anatomic pathology laboratory These are in the form of case presentations with step by step expert analysis Sample cases include common but challenging situations such as work up of a tumor of unknown origin evaluation of well differentiated malignant tumors vs benign reactive lesions identification of newly described tumor entities and implementation of best practice in immunohistochemistry and molecular testing in a difficult case Handbook of Practical Fine Needle Aspiration and Small Tissue Biopsies is written by recognized experts in their fields and provides a unique and valuable resource in the field of cytopathology both for those currently in training and for those already in clinical practice at various skill levels It represents a new comprehensive yet concise resource on these timely and critical topics v FNA Cytology of Ophthalmic Tumors C. V. Biscotti,A. D. Singh,2011-10-19 This comprehensive and well illustrated volume in the outstanding Monographs in Clinical Cytology series examines the spectrum of ophthalmic cytology including uveal retinal and orbital tumors It includes historical perspectives current indications surgical techniques and practical aspects of the cytological preparation of ophthalmic fine needle aspiration samples The importance of a close collaboration between cytologists and ophthalmologists in the field of ophthalmic tumors is emphasized The monograph presents high quality illustrations accompanied by very informative legends that reveal the details of the clinical cytological correlation evident in many of the cases managed by the authors It presents a complete spectrum of ophthalmic tumors covering uveal melanoma uveal metastasis intraocular lymphoma and orbital tumors Recent innovations in the instrumentation and use of digital cytology in fine needle aspiration biopsy are also reviewed This publication is an excellent reference text on rare tumors It is highly recommended reading for ophthalmic pathologists cytologists and oncologists **New Frontiers in Cytology** Klaus Goerttler,Georg Feichter,Siegfried Witte,2012-12-06 Diagnostic cytology has recently enjoyed increased attention and significance in modern research Essential information on latest developments in methods and applications in cytology is provided by this book Chapters review methodological advances such as in cancer detection and explore potential relationships to molecular biology Also discussed are viral infection fundamentals of quantitative methods and the revolutionary role of immunocytochemistry in diagnostic cell typing The new insights offered by transmission and scanning electron microscopy into cellular structure and function are discussed and the connections between cytology and histology are highlighted Epidemiology in connection with cytology is incorporated in special reports The current developments described here will become routine methods of the cytology of tomorrow **Cytopathology of Bone and Soft Tissue Tumors** Lester J. Layfield,2002 Cytopathology of Bone and Soft Tissue Tumors provides the practicing pathologist with a single reference for describing and illustrating the cytologic features of musculoskeletal tumors Using fine needle aspiration FNA the approach of this work is encyclopedic both relatively common and relatively rare lesions are depicted It is expected

that Cytopathology of Bone and Soft Tissue Tumors will serve to widen the usage of the FNA technique which can substantially decrease patient morbidity lessen the complications that arise due to other biopsy techniques and shorten the time as well as expense required for diagnosis The chapters on soft tissue lesions are organized by direction of differentiation Each chapter documents both the common and uncommon lesions within the tissue group Summaries of clinical findings are given along with the histopathologic and cytologic description Key diagnostic points in tabular form and a discussion of the differential diagnosis complete each section The section on skeletal lesions is organized along predominant cell type seen in smears This approach facilitates grouping of lesions into diagnostically useful categories allowing the pathologist faced with an unfamiliar lesion to rapidly access the portion of the text most useful for differential diagnosis Within each chapter the organization is similar to that within the soft tissue chapters The introduction discusses technical concerns limitations of the technique and a diagnostic approach in both tabular and narrative form Information on grading of soft tissue sarcomas completes the introduction

Modern Methods in Analytical Morphology J. Gu,G.W. Hacker,2012-12-06 While advances in modern medicine largely parallel our understanding of morphology discoveries in morphology are propelled by developments of new tools and means to visualize and measure tissue elements The invention of dissecting light fluorescence and electron microscopes together with advances in labeling and staining techniques are among the stepping stones of morphological progress Today we are in an exciting new era when classical morphology is being combined with developments from other disciplines The combination of morphology and immunology resulted in immunocytochemistry morphology and molecular biology led to in situ hybridization and in situ PCR Adding computer science to morphology gave birth to image analysis Combining laser technology and the microscope evolved into confocal microscope For more than a decade modern morphology has continued to develop by merging with other disciplines at a rate that is still gathering momentum providing exciting and dynamic new frontiers for other biological fields Modern Methods in Analytical Morphology based largely on the First International Workshop on Modern Methods in Analytical Histochemistry is an updated review of the current trends in the field It covers an extensive array of new technical developments in major disciplines of modern morphology The authors are not only leaders in their fields but also have extensive hands on experience with bench work Their chapters are written in a comprehensive manner including discussion of both theoretical considerations and practical applications to give the readers a broad view of the topics covered
