Abstract—The purpose of this study was to determine the effect of a 12-week training program on the heart rate (HR) and energy expenditure (EE) of sedentary, middle-aged women. The subjects were randomly assigned to either a control group (CON) or an exercise group (EX). The EX group performed a 12-week training program consisting of three sessions per week of 30 minutes of moderate-intensity aerobic exercise. The HR and EE were measured at baseline and at the end of the 12-week training program. The EX group showed a significant decrease in HR and a significant increase in EE compared to the CON group. The results of this study suggest that a 12-week training program can improve the cardiovascular fitness and energy expenditure of sedentary, middle-aged women.

The new edition also covers empirical methods such as tight binding and molecular dynamics. Optics in Magnetic Multilayers and Nanostructures Stefan Visnovsky, 2018-10-03. In the continuing push toward optical computing the focus remains on finding and developing the right materials. Characterizing materials understanding the behavior of light in these materials and being able to control the light are key players in the search for suitable optical materials. *Optics in Magnetic Multilayers and Nanostructures* presents an accessible introduction to optics in anisotropic magnetic media. While most of the literature presents only final results of the complicated formulae for the optics in anisotropic media this book provides detailed explanations and full step by step derivations that offer insight into the procedure and reveal any approximations. Based on more than three decades of experimental research on the subject the author explains the basic concepts of magneto-optics nonreciprocal wave propagation the simultaneous effect of crystalline symmetry and arbitrarily oriented magnetization on the form of permittivity tensors spectral dependence of permittivity multilayers at polar longitudinal transverse and arbitrary magnetization the effect of normal or near normal incidence on multilayers and anisotropic multilayer gratings. Making the subject of magneto-optics and anisotropic media approachable by the nonspecialist *Optics in Magnetic Multilayers and Nanostructures* serves as an ideal introduction to newcomers and an indispensable reference for seasoned researchers. *New Trends in Intercalation Compounds for Energy Storage* Christian Julien, J.P. Pereira-Ramos, A. Momchilov, 2012-12-06. Recent advances in electrochemistry and materials science have opened the way to the evolution of entirely new types of energy storage systems rechargeable lithium ion batteries electrochroms hydrogen containers etc all of which have greatly improved electrical performance and other desirable characteristics. This book encompasses all the disciplines linked in the progress from fundamentals to applications from description and modelling of different materials to technological use from general diagnostics to methods related to technological control and operation of intercalation compounds. Designing devices with higher specific energy and power will require a more profound understanding of material properties and performance. This book covers the status of materials and advanced activities based on the development of new substances for energy storage. Hydrogen Technology Aline Léon, 2008-07-18. Aline Léon. In the last years public attention was increasingly shifted by the media and world governments to the concepts of saving energy reducing pollution protecting the environment and developing long term energy supply solutions. In parallel research funding relating to alternative fuels and energy carriers is increasing on both national and international levels. Why has future energy supply become such a matter of concern? The reasons are the problems created by the world's current energy supply system which is mainly based on fossil fuels. In fact the energy stored in hydrocarbon based solid liquid and gaseous fuels was and will be widely consumed for internal combustion engine based transportation for electricity and heat generation in

residential and industrial sectors and for the production of fertilizers in agriculture as it is convenient abundant and cheap. However such a widespread use of fossil fuels by a constantly growing world population from 2.3 billion in 1939 to 6.5 billion in 2006 gives rise to the two problems of oil supply and environmental degradation. The problem related to oil supply is caused by the fact that fossil fuels are not newable primary energy sources. This means that since the first barrel of petroleum has been pumped out from the ground we have been exhausting a heritage given by nature.

Progress in Clean Energy, Volume 2 Ibrahim Dincer, C. Ozgur Colpan, Onder Kizilkan, M. Akif Ezan, 2015-10-28. This expansive reference provides readers with the broadest available single volume coverage of leading edge advances in the development and optimization of clean energy technologies. From innovative biofuel feed stocks and processing techniques to novel solar materials with record breaking efficiencies, remote sensing for offshore wind turbines to breakthroughs in high performance PEM fuel cell electrode manufacturing, phase change materials in green buildings to bio sorption of pharmaceutical pollutants, the myriad exciting developments in green technology described in this book will provide inspiration and information to researchers, engineers and students working in sustainability around the world.

High Density Digital Recording K.H.J Buschow, G.J Long, F. Grandjean, 2012-12-06. High density digital magnetic and magneto optical storage devices are widely used in audio, video and data processing information technology as well as in CAD/CAM computer systems. These widespread uses generate a continually increasing demand for both increased information storage densities and capacities and for reduced access times. Hence the materials engineering of high density storage media with a high signal to noise ratio and the associated design of sophisticated read and write heads form the basis of major technological research. This research is especially complex because ideally the recorded information should be both erasable and at the same time secure and accessible over periods of many decades. As a result research on these complex problems requires a multidisciplinary approach which utilizes the expertise in such widely differing fields as organic, inorganic and solid state chemistry, metallurgy, solid state physics, electrical and mechanical engineering and systems analysis. Often further research specialization is necessary in each of these different disciplines. For instance solid state physics and chemistry address the problems of crystallographic structure and phase diagram determination, magnetism and optics, but more advanced research methods such as high resolution electron microscopy and electronic band structure calculations are necessary to understand the microstructure of particulate recording media or the electronic spectra of magneto optical recording media.

Hydrogen Generation, Storage and Utilization Jin Zhong Zhang, Jinghong Li, Yat Li, Yiping Zhao, 2014-04-02. The potential use of hydrogen as a clean and renewable fuel resource has generated significant attention in recent years, especially given the rapidly increasing demand for energy sources and the dwindling availability of fossil fuels. Hydrogen is an ideal fuel in several ways. Its only byproduct of consumption is water; it is the most abundant element in the universe and it is available at low cost. Hydrogen generation is possible via a number of possible chemical processes to separate the hydrogen from its bond with atoms such as carbon.

nitrogen and oxygen In this book the authors provide the scientific foundations for established and innovative methods of hydrogen extraction outline solutions for its storage and illustrate its applications in the fields of petroleum chemical metallurgical physics and manufacturing Addresses the three fundamental aspects of hydrogen as a fuel resource generation storage and utilization Provides theoretical basis for the chemical processes required for hydrogen generation including solar photoelectrochemical thermochemical and fermentation methods Discusses storage of hydrogen based on metal hydrides hydrocarbons high pressure compression and cryogenics Examines the applications of hydrogen utilization in the fields of petroleum chemical metallurgical physics and manufacturing Contains over 90 figures including 27 color figures

Engineering Materials RK Rajput, 2008 The book has been thoroughly revised Several new articles have been added specifically in chapters in mortar Concrete Paint Varnishes Distempers and Antitermite treatment to make the book to still more comprehensive and a useful unit for the students preparing for the examination in the subject
