La destrucción de la ciencia en España Luis E. Otero Carvajal, 2006 **The History of Physics in Cuba** Angelo Baracca, Jürgen Renn, Helge Wendt, 2014-04-22 This book brings together a broad spectrum of authors both from inside and from outside Cuba who describe the development of Cuba's scientific system from the colonial period to the present. It is a unique documentation of the self-organizing power of a local scientific community engaged in scientific research on an international level. The first part includes several contributions that reconstruct the different stages of the

history of physics in Cuba from its beginnings in the late colonial era to the present. The second part comprises testimonies of Cuban physicists who offer lively insights from the perspective of the actors themselves. The third part presents a series of testimonies by foreign physicists some of whom were directly involved in developing Cuban physics in particular in the development of teaching and research activities in the early years of the Escuela de Física. The fourth part of the volume deals with some of the issues surrounding the publishing of scientific research in Cuba. Cuba's recent history and current situation are very controversial issues. Little is known about the development and status of higher education and scientific research on the island. However, Cuba has one of the highest proportions in the world of people with a university degree or doctorate and is known for its highly developed medical system. This book focuses on a comprehensive overview of the history of the development of one specific scientific discipline physics in Cuba. It traces the evolution of an advanced research system in a developing country and shows a striking capacity to link the development of modern research with the concrete needs of the country and its population. A little known aspect is the active participation of several western physicists and technicians during the 1960s the role of summer schools organized by French, Italian and other western physicists as well as the active collaboration with European universities.
