## **Electric Vehicles:**

The Electric Vehicle Gijs Mom, 2013-02-15 One hopes as a new generation of electric vehicles becomes a reality The Electric Vehicle offers a long overdue reassessment of the place of this technology in the history of street transportation

**History of Electric Cars** Nigel Burton, 2013-06-30 One hundred years ago electric cars were the most popular automobiles in the world In the late nineteenth century and at the start of the twentieth century they outsold every other type of car And yet within a couple of decades of the start of the twentieth century the electric car had vanished Thousands of battery powered cars disappeared from the streets replaced by the internal combustion engine and their place in the history of the automobile was quietly erased A century later electric cars are making a comeback Fears over pollution and global warming have forced manufacturers to reconsider the electric concept A History of Electric Cars presents for the first time the full story of electric cars and their hybrid cousins It examines how and why electric cars failed the first time and why today's car manufacturers must learn the lessons of the past if they are to avoid repeating previous mistakes all over again The book examines in detail Early vehicles such as the Lohner Porsche petrol electric hybrid of 1901 Key figures in the history of the electric car development such as Henry Ford Sir Clive Sinclair's plans to build a number of electric vehicles designed to sit alongside the Sinclair C5 The return of the electric technology to vehicles as diverse as the NASA Lunar Rover commuting vehicles and supercars Future developments in electric cars For the first time the full story of electric cars and their hybrids are examined The hidden past of the electric automobile is uncovered and its future developments are discussed Superbly illustrated with 300 colour photographs many of which are rare and original sketch designs Nigel Burton has written and lectured on cars and automotive history for more than twenty years

The Electric Vehicle Gijs Mom, 2004-04-26 Winner of the Engineer Historian Award from the International History and Heritage Committee of the American Society of Mechanical Engineers and the Nicholas Joseph Cugnot Award given by the Society of Automotive Historians Recent attention to hybrid cars that run on both gasoline and electric batteries has made the electric car an apparent alternative to the internal combustion engine and its attendant environmental costs and geopolitical implications Few people realize that the electric car neither a recent invention nor a historical curiosity has a story as old as that of the gasoline powered automobile and that at one time many in the nascent automobile industry believed battery powered engines would become the dominant technology In both Europe and America electric cars and trucks succeeded in meeting the needs of a wide range of consumers Before World War II as many as 30 000 electric cars and more than 10 000 electric trucks plied American roads European cities were busy with electrically propelled fire engines taxis delivery vans buses heavy trucks and private cars Even so throughout the century long history of electric propulsion the widespread conviction it was an inferior technology remained stubbornly in place an assumption mirrored in popular and scholarly memory In The Electric Vehicle Gijs Mom challenges this view arguing that at the beginning of the automobile age neither the internal

combustion engine nor the battery powered vehicle enjoyed a clear advantage He explores the technology and marketing consumer ratio faction relationship over four generations of electric vehicle design with separate chapters on privately owned passenger cars and commercial vehicles Mom makes comparisons among European countries and between Europe and America He finds that the electric vehicle offered many advantages among them greater reliability and control less noise and pollution He also argues that a nexus of factors cultural underpowered and less rugged electric cars seemed feminine at a time when most car buyers were men structural the shortcomings of battery technology at the time and systemic the infrastructural problems of changing large numbers of batteries ultimately gave an edge to the internal combustion engine One hopes as a new generation of electric vehicles becomes a reality The Electric Vehicle offers a long overdue reassessment of the place of this technology in the history of street transportation Electric Vehicles: Prospects and Challenges Tariq Muneer, Mohan Kolhe, Aisling Doyle, 2017-07-11 Electric Vehicles Prospects and Challenges looks at recent design methodologies and technological advancements in electric vehicles and the integration of electric vehicles in the smart grid environment comprehensively covering the fundamentals theory and design recent developments and technical issues involved with electric vehicles Considering the prospects challenges and policy status of specific regions and vehicle deployment the global case study references make this book useful for academics and researchers in all engineering and sustainable transport areas Presents a systematic and integrated reference on the essentials of theory and design of electric vehicle technologies Provides a comprehensive look at the research and development involved in the use of electric vehicle technologies Includes global case studies from leading EV regions including Nordic and European countries China and India

**Plug-In Electric Vehicles** David B. Sandalow, 2009-09-01 Plug in electric vehicles are coming Major automakers plan to commercialize their first models soon while Israel and Denmark have ambitious plans to electrify large portions of their vehicle fleets No technology has greater potential to end the United States crippling dependence on oil which leaves the nation vulnerable to price shocks supply disruptions environmental degradation and national security threats including terrorism What does the future hold for this critical technology and what should the U S government do to promote it Hybrid vehicles now number more than one million on America s roads and they are in high demand from consumers The next major technological step is the plug in electric vehicle It combines an internal combustion engine and electric motor just as hybrids do But unlike their precursors PEVs can be recharged from standard electric outlets meaning the vehicles would no longer be dependent on oil Widespread growth in the use of PEVs would dramatically reduce oil dependence cut driving costs and reduce pollution from vehicles National security would be enhanced as reduced oil dependence decreases the leverage and resources of petroleum exporters Brookings fellow David Sandalow heads up an authoritative team of experts including former government officials private sector analysts academic experts and nongovernmental advocates Together they explain the current landscape for PEVs the technology the economics and the implications for national security and the environment They examine how the national interest could be served by federal promotion and investment in PEVs For example can tax or procurement policy advance the cause of PEVs Should the public sector contribute to greater research and development Should the government insist on PEVs to replenish its huge fleet of official vehicles Plug in electric vehicles are coming But how soon in what numbers and to what effect Feder

The electric vehicle seemed poised in 1900 to be a leader in automotive production Clean odorless noiseless and mechanically simple electrics rarely broke down and were easy to operate An electric car could be started instantly from the driver's seat no other machine could claim that advantage But then it all went wrong As this history details the hope and confidence of 1900 collapsed and just two decades later electric cars were effectively dead They had remained expensive even as gasoline cars saw dramatic price reductions and the storage battery was an endless source of problems An increasingly frantic public relations campaign of lies and deceptive advertising could not turn the tide      **Modern Electric**
