McNerney,1998-11 Intended for both lay technical readers this report serves as a basic reference tool that provides a comprehensive delineation of the electric power industry its traditional structure which has been based on its monopoly status In addition it describes the industry s transition to a competitive environment by providing a descriptive analysis of the factors that have contributed to the interest in a competitive market proposed legislative regulatory actions the steps being taken by the various components of the industry to meet the challenges of adapting to prevailing in a competitive environment Figures tables historical information Renewable Energy Sources and Climate Change Mitigation Ottmar

Edenhofer, Ramón Pichs-Madruga, Youba Sokona, Kristin Seyboth, Susanne Kadner, Timm Zwicker, Patrick Eickemeier, Gerrit Hansen, Steffen Schlömer, Christoph von Stechow, Patrick Matschoss, 2011-11-21 This Intergovernmental Panel on Climate Change Special Report IPCC SRREN assesses the potential role of renewable energy in the mitigation of climate change It covers the six most important renewable energy sources bioenergy solar geothermal hydropower ocean and wind energy as well as their integration into present and future energy systems It considers the environmental and social consequences associated with the deployment of these technologies and presents strategies to overcome technical as well as non technical obstacles to their application and diffusion SRREN brings a broad spectrum of technology specific experts together with scientists studying energy systems as a whole Prepared following strict IPCC procedures it presents an impartial assessment of the current state of knowledge it is policy relevant but not policy prescriptive SRREN is an invaluable assessment of the potential role of renewable energy for the mitigation of climate change for policymakers the private sector and academic researchers

Regulating Utilities with Management Incentives Kurt A. Strasser, Mark Kohler, 1989-12-11 This book proposes a new approach to the government regulation of utilities Arguing that traditional command and control regulation does not encourage efficient performance Strasser and Kohler advocate the use of an incentive based regulatory system and offer a practical realistic strategy for the successful implementation of such plans within the context of utility regulation The analysis is supported by a comprehensive survey of the relevant legal materials an overview of the literature on organization theory and institutional economics and a survey of the latest thinking on how incentives can most effectively be paid Strasser and Kohler begin by identifying problems associated with current regulatory techniques demonstrating that disincentives are often built into the regulatory system When that system has tried incentives the authors show they have been applied in an ad hoc manner further exacerbating the problem In presenting the case for incentive based regulation the authors review the history of comprehensive incentive plans look at what organization theory can teach us about using incentives as a regulatory strategy and explore the effective use of incentive compensation by nonregulated companies Strasser and Kohler then develop a strategy for implementing incentive plans in regulated utilities showing that in order to work the plans must include the installation of clearly defined bonuses and penalties specific standards of performance the payment of bonuses to managers rather than shareholders and reliable and complete measures of company performance Policymakers economists public utility regulators and attorneys involved in the complex arena of utility regulation will find *Regulating Utilities with Management Incentives* indispensable reading
