## **Electromagnetics Fluid Dynamics Of Gas:**

Magnetogasdynamics and Plasma Dynamics Shih-I. Pai, 2012-12-06 This book is based on the lecture notes which the author gave in a seminar of the same title in the Institut für theoretische Gasdynamik D V L e V Aachen Germany during the academic year of 1957-1958. The subject matter has been rewritten and expanded after the author's return to the University of Maryland. The purpose of this book is to give a theoretical introduction to plasma dynamics and magnetogasdynamics from the gasdynamic point of view. Attention is given to the basic assumptions and the formulation of the theory of the flow problems of a plasma and ionized gas as well as to the various methods of solving these problems. Since plasma dynamics is still in a developing stage, the author hopes that this book may furnish the readers some basic elements in the theory of plasma dynamics so that they may find it useful for further study and research in this new field. After the introduction in which the scope of plasma dynamics is briefly discussed, the fundamental equations of plasma dynamics from the macroscopic point of view, i.e., the theory of continuum, has been analyzed in detail in chapters I to IV, including many simplified cases such as magnetogasdynamics, magnetohydrodynamics, electromagnetodynamics, radiation magnetogasdynamics, etc. In chapter V, the important parameters and their range of applications have been treated. The parameters are useful in the correlation of experimental results.

**Computational Electromagnetic-Aerodynamics** Joseph J. S. Shang, 2016-04-11 Presents numerical algorithms, procedures, and techniques required to solve engineering problems relating to the interactions between electromagnetic fields and fluid flow and interdisciplinary technology for aerodynamics, electromagnetics, chemical physics, kinetics, and plasmadynamics. Integrates interlinking computational model and simulation techniques of aerodynamics and electromagnetics. Combines classic plasma drift-diffusion theory and electron impact ionization modeling for electromagnetic aerodynamic interactions. Describes models of internal degrees of freedom for vibration relaxation and electron excitations. *U.S. Government Research Reports*, 1962

**Magneto-Fluid Dynamics** Paul Lorrain, Francois Lorrain, Stephane Houle, 2007-10-31 Magnetohydrodynamics (MHD) concerns the interaction between magnetic fields and conducting fluids. We are concerned here with macroscopic interactions and when the conducting fluid is a plasma, time scales are very much longer than the plasma period. Plasma periods vary widely but are short, say 10 seconds. We prefer the term Magneto-F i Z i Dynamics (MFD) because the discipline concerns mostly plasmas, various liquid conductors, and the liquid part of the Earth's core. It seems that the only applications of MFD to water are the induction of electric currents in the oceans by the Earth's magnetic field and ship propulsion. But even MFD is not quite appropriate because that term also includes solid conductors that move in magnetic fields. This book is meant for graduate and upper division undergraduate students in Physics, Geophysics, and Astrophysics, as well as for practicing scientists in these fields. This book is no more than a brief introduction to MFD because this vast subject is closely related to many others, namely Astrophysics, Electrodynamics, Fluid Dynamics, Geophysics, Oceanography, Plasma Physics, Thermonuclear Fusion, etc. We sketch the fundamentals and

provide many Examples as well as Case Studies related to natural phenomena MFD sorely needs a rethink it must of course be totally compatible with Physics On the contrary it is the custom to discuss the shapes of imaginary magnetic field lines without ever referring to the required electric currents
