Biologic Effects of Environmental Electromagnetism H. L. König, A. P. Krüger, S. Lang, W. Sönning, 2012-12-06
ARCHIVE COPY DO NOT REMOVE The public in industrialized countries shows a mounting concern about biological effects of electrical and magnetic fields As a result experimental studies on this subject are being published in increasing numbers throughout the world Prof H L König of the Technical University of Munich West Germany a leading expert and pioneer in this field has written an authoritative text in a lucid style which makes the material also accessible to lay readers The book describes the effects of natural as well as artificial electromagnetic energies covering the entire measurable frequency range from the highest frequencies x rays through microwaves radio waves and finally extremely low frequency ELF waves Citing the evidence from scientific studies in various countries König also appraises the biologic effects of microwaves and high tension power lines which have become controversial issues in recent years Other contributions to the book have been made by Prof Albert P Krueger University of California Berkeley on air ionization effects and by the meteorologist Walter Sönning on biometeorology documenting the influence of atmospheric electrical currents on health and disease Moreover the late Dr Siegfried Lang a former coworker of Dr König has contributed to this book

Man-Machine-Environment System Engineering Shengzhao Long, Balbir S. Dhillon, 2016-08-26
This research topic was first established in China by Professor Shengzhao Long in 1981 with direct support from one of the greatest modern Chinese scientists Xuesen Qian In a letter to Shengzhao Long from October 22nd 1993 Xuesen Qian wrote You have created a very important modern science subject and technology in China MMESE primarily focuses on the relationship between Man Machine and Environment studying the optimum combination of man machine environment systems In this system Man refers to working people as the subject in the workplace e g operators decision makers Machine is the general name for any object controlled by Man including tools machinery computers systems and technologies and Environment describes the specific working conditions under which Man and Machine interact e g temperature noise vibration hazardous gases etc The three goals of optimization are to ensure Safety High efficiency and Economy of man machine environment systems These proceedings are an academic showcase of the best papers selected from more than 400

submissions introducing readers to the top research topics and the latest developmental trends in the theory and application of MMESE These proceedings are interdisciplinary studies on the concepts and methods of physiology psychology system engineering computer science environment science management education and other related disciplines Researchers and professionals who study an interdisciplinary subject crossing above disciplines or researchers on MMESE subject will be mainly benefited from these proceedings

Environmental and Space Electromagnetics Hiroshi Kikuchi,2012-12-06

This book is based on the updated versions of a lively mixture of tutorials topical papers and scientific and technological contributions collected from the International URSI Symposium on Environmental and Space Electromagnetics held in Tokyo on 4 6 September 1989 It was sponsored by the International Union of Radio Science URSI as an activity of Commission E Chairman present editor preceding the URSI General Assembly in Prague Czechoslovakia in 1990 The aim was an exchange of information and views to highlight the state of the art in radio science and interdisciplinary areas Along this line the editor has attempted to cover quite new novel or unconventional subjects besides more traditional or conventional ones Although a great many subjects have apparently been covered this book has been edited so the reader can find some common concepts or views presented On this basis a group of many subjects can be treated in a unified fashion and new ideas and views can be gained as a most valuable addition to current knowledge This is one of the major features of this volume that cannot be found in any of the monographs or proceedings that cover a narrow range of limited topics Its broad scope does not stand for presentation in a superficial and shallow manner but stands for a strong focus on the search for a common nature in basic concepts or views in apparently diverse subjects and a focus on the advanced or innovative nature of each contribution

Alaskan Radar System, Over the Horizon Backscatter Radar System, Proposed ,1987 **West Coast Over the Horizon Backscatter Radar System Construction-operation** ,1983 Electromagnetic Environments and Health in Buildings Derek Clements-Croome,2004-03-01 With increasing use of mobile phones and VDUs levels of background radiation and electromagnetism are rising particularly in the workplace and also in the home To some extent this is unavoidable but the level of dangers is unclear is it trivially small moderate or high What are the risks of illness and how can these be reduced to minimal or tolerable levels Are some people more vulnerable than others What can or should employers building engineers and designers product designers workers and other members of the public do This book of which the chapters derive from presentations given by distinguished authorities at a major international conference aims to present sound technical information on the whole range of key issues in a clear and accessible way

Electromagnetic Compatibility Handbook Kenneth L. Kaiser,2004-09-29 As the number of electrical devices in use continues to grow so do the challenges of ensuring the electromagnetic compatibility EMC of products and systems Fortunately engineers have at their disposal an array of approximations models and rules of thumb to help them meet those challenges Unfortunately the number of these tools and guidelines is overwhelming and worse still is the thought of investigating their origins and confirming their results The Electromagnetic Compatibility Handbook is an unprecedented compilation of the many approximations guidelines models and rules of thumb used in EMC analyses complete with their

sources and their limitations The book presents these in an efficient question and answer format and incorporates an extremely comprehensive set of tables and figures The author has either derived from basic principles or obtained and verified from their original sources all of the expressions in the tables Mathcad was used to generate most of the plots and solve many of the equations and the author includes the Mathcad programs for many of these so users can clearly see the variable assignments assumptions and equations Designed to be of long lasting value to engineers researchers and students the Electromagnetic Compatibility Handbook is ideal both for quick reference and as a textbook for upper level and graduate electrical engineering courses
