The book sets out the emergence of shareholder primacy orientated corporate governance using a study of historical developments in the United Kingdom and the United States. Talbot sees shareholder primacy as a political choice made by governments not a natural feature of the inevitable market. She describes the periods of progressive corporate governance which governments promoted in the middle of the 20th century using a close examination of the theories of the company which then prevailed. She critically examines the rise of neoliberal theories on the company and corporate governance and argues that they have had a negative and regressive impact on social and economic development. In examining contemporary corporate governance she shows how regulatory styles as informed and described by prevailing regulatory theories enables neoliberal outcomes. She illustrates how United Kingdom derived corporate governance codes have informed the corporate governance initiatives of European and global institutions. From this she argues that neoliberalism has re entered ex command transition economies through those United Kingdom and OECD inspired corporate governance Codes over a decade after the earlier failed and destructive neoliberal prescriptions for transition had been rejected. Throughout Talbot argues that shareholder primacy has socially regressive outcomes and firmly takes a stand against current initiatives to enhance shareholder voting in such issues as director remuneration. The book concludes with a series of proposals to recalibrate the power between those involved in company activity: shareholders, directors and employees so that the public company can begin to work for the public and not shareholders. *International Dictionary of Public Management and Governance* Gambhir Bhatta, 2015-03-27 This authoritative up to date resource will become the standard reference on the theory and practice of public management.

**Evaluation of Guidelines for Exposures to Technologically Enhanced Naturally Occurring Radioactive Materials** Committee on Evaluation of EPA Guidelines for Exposure to Naturally Occurring Radioactive

Materials, Commission on Life Sciences, Division on Earth and Life Studies, National Research Council, 1999-02-08 Naturally occurring radionuclides are found throughout the earth's crust and they form part of the natural background of radiation to which all humans are exposed. Many human activities such as mining and milling of ores, extraction of petroleum products, use of groundwater for domestic purposes, and living in houses alter the natural background of radiation either by moving naturally occurring radionuclides from inaccessible locations to locations where humans are present or by concentrating the radionuclides in the exposure environment. Such alterations of the natural environment can increase, sometimes substantially, radiation exposures of the public. Exposures of the public to naturally occurring radioactive materials (NORM) that result from human activities that alter the natural environment can be subjected to regulatory control at least to some degree. The regulation of public exposures to such technologically enhanced naturally occurring radioactive materials (TENORM) by the US Environmental Protection Agency (EPA) and other regulatory and advisory organizations is the subject of this study by the National Research Council's Committee on the Evaluation of EPA Guidelines for Exposures to Naturally Occurring Radioactive Materials. **The Businessperson's Guide to Technology Risk Management** Jonathan R.
