Futures By Design The Practice Of Ecological Planning:

Futures by Design Doug Aberley, 1994 *Preserving the Legacy* Allen G. Noble, Frank J. Costa, 1999-01-01 Though only a relatively recent topic of worldwide discussion and interest the concept of sustainable development traces its origins to the late eighteenth century when concern for resource conservation and environmental integrity first arose From this beginning the concern for sustainable development progressively expanded from being purely local to having a regional and national relevance and finally to being a global concern of import *Preserving the Legacy* examines this expansion while discussing several general approaches to the understanding and application of the concept of sustainability Also discussed are such weighty issues as the balancing of development aspirations with environmental management in developing countries and the means by which residents in an urbanizing region in a developed country can be induced to consider sustainable development as both a goal and a limiting factor in the conversion of agricultural land Offering both real world examples of sustainability issues and a forecast for the future of sustainability theory and practice this fascinating volume will prove invaluable to scholars of the environment geography and urban planning *Projecting Environmental Trends from Economic Forecasts* Peter Meyer, Thomas Lyons, Tara Clapp, 2017-11-22 This title was first published in 2000 Sustainable development offers visions of the future but implementation of new sustainable policies seems slow This text presents a forecasting method directed to overcome some barriers to the implementation of more sustainable economic policy Using a case study the authors describe how economic and environmental forecasts can be developed that are relevant to the immediate concerns of policy makers and are more likely to lead to policy changes A combination of forecasting methods are shown to evaluate a range of current alternatives in the future Similar techniques have been used in developing countries but here the techniques are applied to an already industrialized economy **Ecopolis** Paul F. Downton, 2008-12-09 From 2008 for the first time in human history half of the world's population now live in cities Yet despite a wealth of literature on green architecture and planning there is to date no single book which draws together theory from the full range of disciplines from architecture planning and ecology which we must come to grips with if we are to design future cities which are genuinely sustainable Paul Downton's *Ecopolis* takes a major step along this path It highlights the urgent need to understand the role of cities as both agents of change and means of survival at a time when climate change has finally grabbed world attention and it provides a framework for designing cities that integrates knowledge both academic and practical from a range of relevant disciplines Identifying key theorists practitioners places and philosophies the book provides a solid theoretical context which introduces the concept of urban fractals and goes on to present a series of design and planning tools for achieving Sustainable Human Ecological Development SHED Combining knowledge from diverse fields to present a synthesis of urban ecology the book will provide a valuable resource for students researchers and practitioners in architecture construction planning geography and the traditional life sciences *Asset Building & Community Development* Gary Paul

Green, Anna Haines, 2012 Employing a broad definition of community development this book shows how asset building can help increase the capacity of residents to improve their quality of life It provides students and practitioners with theoretical and practical guidance on how to mobilize community capital physical human social financial environmental political and cultural to effect positive change Authors Gary Paul Green and Anna Haines show that development controlled by community based organizations provides a better match between these assets and the needs of the communities **The Local Agenda 21 Planning Guide** International Development Research Centre (Canada), International Council for Local Environmental Initiatives, 1996 Local Agenda 21 Planning Guide An introduction to sustainable development planning Planning Canadian Regions Gerald Hodge, Ira M. Robinson, 2007-10-01 Planning Canadian Regions is the first book to consolidate the history evolution current practice and future prospects for regional planning in Canada As planners grapple with challenges wrought by globalization the evolution of massive new city regions and the pressures for sustainable and community economic development a deeper understanding of Canada's approaches is invaluable Hodge and Robinson identify the intellectual and conceptual foundations of regional planning and review the history and main modes of regional planning for rural regions economic development regions resource development regions and metropolitan and city regions They draw lessons from Canada's past experience and conclude by proposing a new paradigm addressing the needs of regional planning now and in the future emphasizing regional governance greater inclusiveness and integration of physical planning with planning for economic sustainability and natural ecosystems Planning Canadian Regions will be a much needed text for students and teachers of regional planning and an indispensable reference for planning practitioners It will also find a receptive audience in such disciplines as urban planning environmental studies geography political science public administration and economics

Future is Urban Utpal Sharma, Swati Kothary, Vibha Gajjar, 2024-06-07 Global concerns and local problems are increasing not only in urban areas but also in regions where the human impact is minimal The global consequences of exploiting and irreversibly utilising natural resources are becoming evident Climate change characterised by erratic weather patterns and global warming has become prevalent around the world This has resulted in the increased occurrence of many calamities such as floods droughts heat waves and other related disasters The efficacy of decision making processes determines the alternative methods for discovering solutions and ensuring readiness for future advancements These kinds of difficulties require profound contemplation and reflection on concepts from multiple viewpoints and necessitate engaging discussions By implementing nature based solutions NBS and blue and green infrastructure BGI it is possible to mitigate their occurrences and address concerns Annual Conference Travel and Tourism Research Association (U.S.), 1997 **Ecological Planning**

Forster Ndubisi, 2003-04-30 Chosen by Choice Magazine as an Outstanding Academic Title for 2003 Ecological planning is the process of understanding evaluating and providing options for the use of landscape to ensure a better fit with human habitation In this ambitious analysis Forster Ndubisi provides a succinct historical and comparative account of the various approaches to this process He then reveals how each of these approaches offers different and uniquely useful perspectives for understanding the dialogue between human and environmental processes Ndubisi begins by examining the philosophies behind and major contributors to ecological thinking during the past 150 years as well as the paradigm shift in planning that occurred in recent decades as a result of a growing global ecological awareness He then turns to landscape suitability analysis and discusses alternative approaches to ecological planning such as applied human ecology applied landscape ecology and others Finally he offers a comparative synthesis of the approaches in order to reveal the theoretical and methodological assumptions inherent when planners choose one approach over the other Ndubisi concludes that no one approach can by itself adequately address the whole spectrum of ecological planning issues For this reason he offers guidance as to when it may be appropriate for landscape architects and planners to emphasize one approach rather than another
