Pashayev A Kh Janahmadov N G Javadov M Y Javadov The paper assesses the type of irregularities of type bursts and
disastrous wear during operation of the tested CU equipment Using the flicker noise spectroscopy FNS which is used to
estimated the parameters of the singular component of the power spectrum of the signal and find significant changes in the
dimensionless parameters of unsteadiness providing an indication of the approaching moments of a catastrophic

Stage Of The Gedabey Gold Copper Deposit Lesser Caucasus M Aliyev G Huseynov The mineral composition and textural and
structural characteristics of ores are studied also the phases and stages of mineralization which are an important source of
information on the conditions of formation of the deposit time allocation of gold and its spatial association with certain
mineral assemblages and associations Consideration of these issues can come to an understanding of the factors behind the
differences in the scale and extent of gold deposits of various types as well as to form a mineralogical search features gold

Transport Based On Their Psycho Physiological Conditions And Productivities R M Jafarzade T R Jafarzade By processing the
data on the human operator active performance with respect to their psycho physiological conditions and productivities in
the human machine systems we developed the algorithm for the possibilities of further execution of their operator duties in
the incomplete and unclear initial data Using fuzzy clustering and the interval fuzzy sets of the second type and the
coordinated assessment of expert opinions on the binary relationship of objects from the class with recommendations on the
further implementation of their activities we obtained the individual assessment of the alternative recommendations for each
of the tested objects from the set of objects The calculation for the experimental data is provided The proposed approach can
be used for the adaptive selection of recommendations on the continuation of duties of air operators and air traffic
controllers by taking into account the dynamic of changes of their psycho physiological states and productivities

thorough time and space with many obstacles injury disease constant uncertainty and relentlessly difficult interactions with other humans Each human is the reincarnation of a long lineage of ancestors Species memory perceptual skills needs drives feelings desires and behaviors are built in and begin operating in utero Humans evolved from primate ancestors and retained features of mind and behavior that have been present in animals for hundreds of millions of years Urges desires designs feelings cry out from within and often surprise us as if we were the hosts to wild animals and spirits within that refuse to be identified or tamed Human behavior can be understood in relation to the whole spectrum of primate behaviors and social organizations Humans appear to have an eclectic combination of primate tendencies with elaboration of features such as tool making symbolic reasoning and spoken language Linda Stone suggested that Primates are a natural grouping of mammals that includes prosimians tree dwelling animals such as lemurs and tarsiers monkeys apes and humans Some of the physical characteristics that distinguish primates from other mammals are binocular vision and the grasping hand with mobile digits and flat nails Evolutionary trends characteristic of the Primate Order are most pronounced in humans and include prolongation of gestation of the fetus prolongation of the period of infant care and expansion and elaboration of the brain An important feature in the social life of many nonhuman primates is dominance and the formation of dominance hierarchies a dominant animal wins aggressive encounters with others and usually has greater access to resources such as food water or sexual partners Rather than viewing society and culture as real things an observer can recognize that humans live in groups that repeat and modify innate behaviors to produce prolific variations on a few underlying themes that are common to all societies A smart observer will consider the grouping characteristics of humans and discern basic patterns and problems underlying the apparent complexity of modern civilization The organization of society begins with small local clusters that link family groups into clans that are more or less cooperative units Clans associate forming bands that tend to affiliate with other bands forming tribes looser affiliations that occupy larger geographic areas The band tribal structure emerges from ancient animal groupings Patterns of organization rules and institutions that regulate human behavior are in flux and will continue to be unstable As human populations expand and interactions become increasingly complex innate abilities are

stretched and distorted The ability of individuals to relate to other humans remains limited and limits the effective management of enlarging groups Managers and leaders do not become smarter as the organizations they lead become larger It is axiomatic that organizations that exceed a threshold number become dysfunctional It is matter of empirical study to recognize group size thresholds and too little is known about the cognitive limitations of leaders **Hybrid Intelligent**

Approaches for Smart Energy John A,Senthil Kumar Mohan,Sanjeevikumar Padmanaban,Yasir Hamid,2022-09-30 HYBRID INTELLIGENT APPROACHES FOR SMART ENERGY Green technologies and cleaner energy are two of the most important topics facing our world today and the march toward efficient energy systems smart cities and other green technologies has been and continues to be a long and intricate one Books like this one keep the veteran engineer and student alike up to date on current trends in the technology and offer a reference for the industry for its practical applications Energy optimization and consumption prediction are necessary to prevent energy waste schedule energy usage and reduce the cost Today smart computing technologies are slowly replacing the traditional computational methods in energy optimization consumption scheduling and usage Smart computing is an important core technology in today s scientific and engineering environment Smart computation techniques such as artificial intelligence machine learning deep learning and Internet of Things IoT are the key role players in emerging technologies across different applications industries and other areas These newer smart computation techniques are incorporated with traditional computation and scheduling methods to reduce power usage in areas such as distributed environment healthcare smart cities agriculture and various functional areas The scope of this book is to bridge the gap between traditional power consumption methods and modern consumptions methods using smart computation methods This book addresses the various limitations issues and challenges of traditional energy consumption methods and provides solutions for various issues using modern smart computation technologies These smart technologies play a significant role in power consumption and they are cheaper compared to traditional technologies The significant limitations of energy usage and optimizations are rectified using smart computations techniques and the computation techniques are applied across a wide variety of industries and engineering areas Valuable as reference for engineers scientists students and other professionals across many areas this is a must have for any library **Advances in Scattering**

Psychological Jurisprudence Bruce A. Arrigo, 2012-02-01 Psychological jurisprudence or the use of psychology in the legal realm relies on theories and methods of criminal justice and mental health to make decisions about intervention policy and programming While the intentions behind the law psychology field are humane the results often are not This book provides a radical agenda for psychological jurisprudence one that relies on the insights of literary criticism psychoanalysis feminist theory political economy analysis postmodernism and related strains of critical thought Contributors reveal the roots of psycholegal logic and demonstrate how citizen justice and structural reform are displaced by so called science and facts A number of complex issues in the law psychology field are addressed including

forensic mental health decision making parricide competency to stand trial adolescent identity development penal punitiveness and offender rehabilitation In exploring how the current resolution to these and related controversies fail to promote the dignity or empowerment of persons with mental illness this book suggests how the law psychology field can meaningfully contribute to advancing the goals of justice and humanism in psycholegal theory research and policy

Post-Truth, Scepticism & Power Stuart Sim,2019-04-02 This book examines the concept of post truth and the impact it is having on contemporary life bringing out both its philosophical and political dimensions Post truth is contextualised within the philosophical discourse of truth with particular reference to theories of scepticism and relativism to explore whether it can take advantage of these to claim any intellectual credibility Sim argues that post truth cannot be defended on either sceptical or relativistic grounds even those provided by recent iconoclastic philosophical movements such as poststructuralism and postmodernism The affinity between post truth and conspiracy theory is emphasised and the extent to which post truth plays a role in religious doctrine is also considered Post truth is seen to constitute a threat to liberal democratic ideals and our Enlightenment heritage raising the question of whether we are moving into a post liberal age where the far right would hold power To prevent this post truth urgently needs to be countered

Naturalism in the Philosophy of Health Élodie Giroux,2016-04-25 In a series of papers published in the 1970s Christopher Boorse proposed a naturalist theory of health mainly based on a value free concept of biological function a concept of reference class and the notion of statistical normality His theory has profoundly shaped the philosophical debates on the concepts of health and

disease It could even be said that the numerous criticisms of his biostatistical theory are at the centre of what is usually referred to as the debate between normativists and naturalists Today the predominant naturalist theory of health is still Boorse s biostatistical theory This volume offers the first comprehensive review and critical assessment of the nature and status of naturalism in the philosophy of health It explores the notion of biological normativity and its relevance for the philosophy of health and it analyses the implications of the philosophical theories of health for healthcare and the debate on health enhancement In the first section several contributions identify the kind of naturalism the biostatistical theory belongs to and offer further criticisms or possible modifications such as the concept of function that is required by this theory and whether a comparativist approach to health is more relevant than a non comparativist one The second section explores natural or biological normativity and some possible accounts of health that could be based on this concept The third and final section focuses on the implications of naturalism in healthcare Goals of Medicine is the first paper in which Christopher Boorse ventured toward analysing the implication of his biostatistical theory of health on the practice of medicine the difficult issue of the goals of medicine and the boundary between treating and enhancing Other papers in this section critically evaluate Boorse s account and analyse the importance of a positive concept of health

National Human Rights Action Planning Azadeh Chalabi, 2018-07-18 This book deals with human rights action planning as a largely under researched area from theoretical doctrinal empirical and practical perspectives and as such provides the most comprehensive studies of human rights planning to date At the theoretical level by advancing a novel general theory of human rights planning it offers an alternative to the traditional state centric model of planning This new theory contains four sub theories contextual substantive procedural and analytical ones At the doctrinal level by conducting a textual analysis of core human rights conventions it reveals the scope and nature of the states obligation to adopt a plan of action for implementing human rights At the empirical level a cross case analysis of national human rights action plans of 53 countries is conducted exploring the major problems of these plans in different phases of planning and uncovering the underlying causes of these problems At the practical level this volume sets out how these plans should be developed and implemented how they can be best monitored by international human rights bodies and how to maximize their effectiveness With discussions bridging human rights theory and practice and development discourse this book will be a useful resource for a wide range of audiences from academics of different disciplines law human rights social policy political science political philosophy legal philosophy development studies planning studies socio legal studies to governments human rights practitioners and the UN human rights bodies
