refereed proceedings of the 4th International Workshop on Visual Form IWVF 4 held in Capri Italy in May 2001 The 66 revised full papers presented together with seven invited papers were carefully reviewed and selected from 117 submissions The book covers theoretical and applicative aspects of visual form processing The papers are organized in topical sections on representation analysis recognition modelling and retrieval and applications      *On Fuzziness* Rudolf Seising, Enric Trillas, Claudio Moraga, Settimo Termini, 2012-12-15 The notion of Fuzziness stands as one of the really new concepts that have recently enriched the world of Science Science grows not only through technical and formal advances on one side and useful applications on the other side but also as consequence of the introduction and assimilation of new concepts in its corpus These in turn produce new developments and applications And this is what Fuzziness one of the few new concepts arisen in the XX Century has been doing so far This book aims at paying homage to Professor Lotfi A Zadeh the father of fuzzy logic and also at giving credit to his exceptional work and personality In a way this is reflected in the variety of contributions collected in the book In some of them the authors chose to speak of personal meetings with Lotfi in others they discussed how certain papers of Zadeh were able to open for them a new research horizon Some contributions documented results obtained from the author s after taking inspiration from a particular idea of Zadeh thus implicitly acknowledging him Finally there are contributions of several third generation fuzzysists or softies who were firstly led into the world of Fuzziness by a disciple of Lotfi Zadeh who following his example took care of opening for them a new road in science Rudolf Seising is Adjoint Researcher at the European Centre for Soft Computing in Mieres Asturias Spain Enric Trillas and Claudio Moraga are Emeritus Researchers at the European Centre for Soft Computing Mieres Asturias Spain Settimo Termini is Professor of Theoretical Computer Science at the University of Palermo Italy and Affiliated Researcher at the European Centre for Soft Computing Mieres Asturias Spain      *Soft Computing for Image Processing* Sankar K. Pal, Ashish Ghosh, Malay K. Kundu, 2013-03-19 Any task that involves decision making can benefit from soft computing techniques which allow premature decisions to be deferred The processing and analysis of images is no exception to this rule In the classical image analysis paradigm the first step is nearly always some sort of segmentation process in which the image is divided into hopefully meaningful parts It was pointed out nearly 30 years ago by Prewitt 1 that the decisions involved in image segmentation could be postponed by regarding the image parts as fuzzy rather than crisp subsets of the image It was also realized very early that many basic properties of and operations on image subsets could be extended to fuzzy subsets for example the classic paper on fuzzy sets by Zadeh 2 discussed the set algebra of fuzzy sets using sup for union and inf for intersection and extended the definition of convexity to fuzzy sets These and similar ideas allowed many of the methods of image analysis to be generalized to fuzzy image parts For a recent review on geometric description of fuzzy sets see e.g. 3 Fuzzy methods are also valuable in image processing and coding where learning processes can be important in choosing the parameters of filters quantizers etc
