Signal Transduction: Pathways, Mechanisms and Diseases Ari Sitaramayya, 2009-12-02 Providing an overview of recent developments in the field of signal transduction this volume emphasizes direct clinical significance As such topics like nuclear receptors apoptosis growth factors cell cycles and cancer are examined **G Proteins, Receptors, and Disease** Allen M. Spiegel, 2012-12-06 More than a collection of review articles G Proteins Receptors and Disease summarizes in depth the state of our knowledge today concerning not only how cells communicate via G protein coupled signal transduction processes but also how defects in these proteins and their receptors can cause serious human disease involving many different organ systems Written by leading investigators each chapter describes in detail the structure and function of a particular G protein or receptor outlines possible mutations and discusses fully the molecular pathogenesis of associated diseases Diagnostic and therapeutic implications are also discussed when relevant In its unique blend of cutting edge basic science and clinical medicine G Proteins Receptors and Disease offers deep insights into the physiological significance of this key signal transduction pathway as well as into the molecular basis of diseases ranging from obesity to malignancy The basic understanding of the complex signal transduction process achieved here provides a firm foundation for future efforts to prevent and cure these diseases G-Proteins Graeme Milligan, Michael J. O. Wakelam, 1992 Details the role of G Proteins and associated transmembrane signalling cascades in a number of diseases and disorders ranging from alcoholism thyroid disorders to cancers and the haemopoietic and pituitary system *Plant Cell Biology* William V Dashek, Marcia Harrison, 2006 While there are a few plant cell biology books that are currently available these are expensive methods oriented monographs The present volume is a textbook for upper undergraduate and beginning graduate students This textbook stresses concepts and is inquiry oriented To this end there is extensive use of original research literature As we live in an era of literature explosion one must be selective These judgements will naturally vary with each investigator Input was sought from colleagues in deciding the literature to include In addition to provision of select research literature this volume presents citations and summaries of certain laboratory methods In this connection the textbook stresses quantitative data to enhance the student's analytical abilities Thus the volume contains computer spread sheets and references to statistical packages e g Harvard Graphics and Statistica *The Postmortem Brain in Psychiatric Research* Galila Agam, Ian P. Everall, Robert Haim Belmaker, 2013-03-09 Because of the dearth of experimental animal models of psychiatric disorders the study of the effect of the disease state is only possible in tissue derived from patients vs controls especially in the target tissue of disease related changes in the brain The human postmortem brain offers the most appropriate experimental paradigm towards understanding the etiology of psychiatric disorders The availability of post mortem human samples from psychiatric patients and comparison groups in recent years has contributed prominently to the accumulating body of information leading to a better understanding of these disorders This is the first book to summarize this research approach

[The Role of Inflammation and Immune Control in Digestive Disease and Therapeutic Approaches](#) Shuai Wang, Liu Changhui, Zhenhua Li, Wenyi Gu, 2025-05-29 Digestive system diseases including gastroenteritis irritable bowel syndrome Crohn's disease ulcerative colitis hepatitis and pancreatitis present as a common disease that affects millions of people worldwide The pathogenesis of these diseases remains as a complex context involving multiple factors such as genetics environment lifestyle microbiome and immune system Recently

multi omics analysis strategies raised much concern about the proximal and distal cross talks between immunocytes and tissue specific cell types Methods for the diagnosis treatment and prognosis of digestive diseases related to immunity such as stem cell therapies small molecule chemical drugs biologics and phytochemicals have been successively developed and applied However the specific functions and related mechanisms of immune cells such as T cells B cells macrophages and other immune cells in digestive diseases still need further exploration Thus investigating the potential and promising immunomodulatory targets would help us uncover the initiation and development of molecular events of immune disorders in digestive system diseases which in turn would promote their prevention and treatment The goal of this Research Topic is to provide a forum to advance research on the comprehensive understanding of immune regulatory mechanisms and the role of abnormal mechanisms in the occurrence and development of digestive diseases as well as to explore innovative immune oriented drugs or treatment interventions in the attempt to achieve a beneficial impact on the diagnosis prevention therapy and prognosis of digestive diseases Bullet points are as below 1 The specific functions and clinical significance of immune cells e g T cells B cells macrophages and other immune cells etc in digestive diseases 2 The mechanism of immune cells participate in inflammatory reactions and tissue damage in digestive diseases 3 The mechanism of regulators affecting the inflammatory response of the digestive system e g nuclear receptor membrane receptor pathway etc 4 The role of small molecules in digestive diseases e g cytokines chemical factors anti inflammatory agents immune regulatory molecules etc 5 Development of novel anti inflammatory and immunomodulatory drugs for digestive diseases Bibliometric studies are outside of the scope of this section and may be rejected or redirected to other journals sections as appropriate Bioinformatics or Computational Analysis of public genome or transcriptome databases need to be accompanied by robust and relevant validation to be submitted to this section Manuscripts describing the pharmacological action of drugs used in traditional medicine in models of disease such as inflammatory disease are not in scope unless they have a strong focus on the immune system
