This is the book version of a special issue of the International Journal of High Speed Electronics and Systems reviewing recent work in the field of compound semiconductor integrated circuits. There are fourteen invited papers covering a wide range of applications, frequencies, and materials. These papers deal with digital, analog, microwave, and millimeter wave technologies, devices, and integrated circuits for wireline, fiber optic, lightwave transmissions, and wireless radio frequency, microwave, and millimeter wave communications. In each case, the market is young and experiencing rapid growth for both commercial and military applications. Many new semiconductor technologies compete for these new markets, leading to an alphabet soup of semiconductor materials described in these papers. The book also includes three papers focused on radiation effects and reliability in III-V semiconductor electronics, which are useful for reference and future directions. Moreover, reliability is covered in several papers separately for certain process technologies.

**Contents:** Present and Future of High Speed Compound Semiconductor ICs T. Otsuji; The Transforming MMIC E. J. Martinez; Distributed Amplifier for Fiber Optic Communication Systems H. Shigematsu et al; Microwave GaN Based Power Transistors on Large Scale Silicon Wafers S. Manohar et al; Radiation Effects in High Speed III-V Integrated Circuits T. R. Weatherford; Radiation Effects in III-V Semiconductor Electronics B. D. Weaver et al; Reliability and Radiation Hardness of Compound Semiconductors S. A. Kayali and other papers.

**Readership:** Engineers, scientists, and graduate students working on high speed electronics and systems and in the area of compound semiconductor integrated circuits.
