Knowledge Discovery in Big Data from Astronomy and Earth Observation Petr Skoda,Fathalrahman

Adam,2020-04-10 Knowledge Discovery in Big Data from Astronomy and Earth Observation Astrogeoinformatics bridges the gap between astronomy and geoscience in the context of applications techniques and key principles of big data Machine learning and parallel computing are increasingly becoming cross disciplinary as the phenomena of Big Data is becoming common place This book provides insight into the common workflows and data science tools used for big data in astronomy and geoscience After establishing similarity in data gathering pre processing and handling the data science aspects are illustrated in the context of both fields Software hardware and algorithms of big data are addressed Finally the book offers insight into the emerging science which combines data and expertise from both fields in studying the effect of cosmos on the earth and its inhabitants Addresses both astronomy and geosciences in parallel from a big data perspective Includes introductory information key principles applications and the latest techniques Well supported by computing and information science oriented chapters to introduce the necessary knowledge in these fields Messier's Nebulae and Star Clusters

Kenneth Glyn Jones,1991-04-04 Charles Messier s catalog of nebulae and star clusters published in 1784 marked the start of a new era of deep sky astronomy Today this tradition of observing galaxies and clusters is kept alive by dedicated amateur astronomers Nearly all the objects are visible in a small telescope and many such as the Crab Nebula and the Andromeda galaxy are among the most fascinating objects in the universe Kenneth Glyn Jones has revised his definitive version of Messier s catalog His own observations and drawings together with maps and diagrams make this a valuable introduction to deep sky observing Historical and astrophysical notes bring the science of these nebulae right up to date This is a unique handbook unlikely ever to be equaled in its completeness and importance to the telescope owner **Annals of the**

Astronomical Observatory of Harvard College ,1937 List of quarto publications exclusive of the Annals made by the officers of the observatory from 1877 to 1896 with references to the work of the Blue Hill observatory from 1885 to 1895 v 30 p 3 8 *Morphological Astronomy* Fritz Zwicky,2012-12-06 Man has a great tendency to get lost or to hide as the case may

be in a jungle of details and in unnecessary complications Why do anything simply if you can do it complicated And still life itself presents a sufficient number of problems to keep us busy There would seem to be no need to create additional difficulties just for the fun of it especially if these self made difficulties become practically insuperable and if in the end they cause much unhappiness The morphological mode of thought and of action was conceived to break the vicious hold which the parasitic wild growth of complications exerts on life in all of its phases Morphological thought and action are likely to be of value in all human activities once such thought and action have been clearly delineated and fully developed and once they have been practised by a sufficiently large number of people Since the morphological method is of the greatest universality the choice of the field to which one applies it first is not particularly critical The author intends to write two or three books on

the morphology of several large scale problems which are both of a technical and of a general social nature The present book is concerned in particular with some implications of morphological thinking in astronomy We shall above all emphasize the basic character of the morphological approach and we shall demonstrate its constructive power in a number of specific cases

Kuiper and the Rise of Modern Planetary Science* Derek W. G. Sears,2019-03-26 Astronomer Gerard P Kuiper ignored the traditional boundaries of his subject Using telescopes and the laboratory he made the solar system a familiar intriguing place It is not astronomy complained his colleagues and they were right Kuiper had created a new discipline we now call planetary science Kuiper was an acclaimed astronomer of binary stars and white dwarfs when he accidentally discovered that Titan the massive moon of Saturn had an atmosphere This turned our understanding of planetary atmospheres on its head and it set Kuiper on a path of staggering discoveries Pluto was not a planet planets around other stars were common some asteroids were primary while some were just fragments of bigger asteroids some moons were primary and some were captured asteroids or comets the atmosphere of Mars was carbon dioxide and there were two new moons in the sky one orbiting Uranus and one orbiting Neptune He produced a monumental photographic atlas of the Moon at a time when men were landing on our nearest neighbor and he played an important part in that effort He also created some of the world s major observatories in Hawai i and Chile However most remarkable was that the keys to his success sprang from his wartime activities which led him to new techniques This would change everything Sears shows a brilliant but at times unpopular man who attracted as much dislike as acclaim This in depth history includes some of the twentieth century s most intriguing scientists from Harold Urey to Carl Sagan who worked with and sometimes against the father of modern planetary science Now as NASA and other space agencies explore the solar system they take with them many of the ideas and concepts first described by Gerard P Kuiper **Science News-letter** ,1929 *Colloquium on the Age of the Universe, Dark Matter, and Structure Formation* Colloquium on the Age of the Universe St,Proceedings of the National Academy of Sciences,1998-01-01 *Reprints - National Radio Astronomy Observatory, Green Bank, W.
