Cohomology Theory of Galois Groups

In this chapter, we first describe the general theory of forming cohomology groups out of an abelian category and a left exact functor. Then we apply the theory to the category of discrete Galois modules and study resulting Galois cohomology groups. We would like to give a full proof of the Tate duality theorems and the Euler characteristic formulas of Galois cohomology groups.

4.1 Categories and Functors

In this section, we describe briefly the theory of categories to provide the basics for our later study of extension groups.

4.1.1 Categories

A category \mathcal{C} consists of two data: objects of \mathcal{C} and morphisms of \mathcal{C} . For any two objects X and Y of \mathcal{C} , we have a set $\text{Hom}_{\mathcal{C}}(X, Y)$ of morphisms satisfying the following three rules:

(ct1) For three objects X, Y, Z , there is a composition map:

$$\text{Hom}_{\mathcal{C}}(Y, Z) \times \text{Hom}_{\mathcal{C}}(X, Y) \rightarrow \text{Hom}_{\mathcal{C}}(X, Z) : (g, f) \mapsto g \circ f;$$

(ct2) (Associativity). For three morphisms: $X \xrightarrow{f} Y \xrightarrow{g} Z \xrightarrow{h} W$, we have $h \circ (g \circ f) = (h \circ g) \circ f$;

(ct3) For each object X , there is a specific element $1_X \in \text{Hom}_{\mathcal{C}}(X, X)$ such that $1_X \circ f = f$ and $g \circ 1_X = g$ for all $f : Y \rightarrow X$ and $g : X \rightarrow Z$.

For two objects X and Y in \mathcal{C} , we write $X \cong Y$ if there exist morphisms $f : X \rightarrow Y$ and $g : Y \rightarrow X$ such that $f \circ g = 1_Y$ and $g \circ f = 1_X$.

Galois Cohomology:

Modular Forms and Galois Cohomology Haruzo Hida, 2000-06-29 Comprehensive account of recent developments in arithmetic theory of modular forms for graduates and researchers *An Introduction to Galois Cohomology and its Applications* Grégory Berhuy, 2010-09-09 This is the first elementary introduction to Galois cohomology and its applications The first part is self contained and provides the basic results of the theory including a detailed construction of the Galois cohomology functor as well as an exposition of the general theory of Galois descent The author illustrates the theory using the example of the descent problem of conjugacy classes of matrices The second part of the book gives an insight into how Galois cohomology may be used to solve algebraic problems in several active research topics such as inverse Galois theory rationality questions or the essential dimension of algebraic groups Assuming only a minimal background in algebra the main purpose of this book is to prepare graduate students and researchers for more advanced study **Galois Cohomology** Jean-Pierre Serre, 2013-12-01 This volume is an English translation of *Cohomologie Galoisienne* The original edition Springer LN5 1964 was based on the notes written with the help of Michel Raynaud of a course I gave at the College de France in 1962 1963 In the present edition there are numerous additions and one suppression Verdier s text on the duality of profinite groups The most important addition is the photographic reproduction of R Steinberg s Regular elements of semisimple algebraic groups Publ Math LH E S 1965 I am very grateful to him and to LH E S for having authorized this reproduction Other additions include A proof of the Golod Shafarevich inequality Chap I App 2 The resume de cours of my 1991 1992 lectures at the College de France on Galois cohomology of k T Chap II App The resume de cours of my 1990 1991 lectures at the College de France on Galois cohomology of semisimple groups and its relation with abelian cohomology especially in dimension 3 Chap III App 2 The bibliography has been extended open questions have been updated as far as possible and several exercises have been added In order to facilitate references the numbering of propositions lemmas and theorems has been kept as in the original 1964 text Jean Pierre Serre Harvard Fall 1996 Table of Contents Foreword V Chapter I Cohomology of profinite groups 1 Profinite groups 3 *Cohomological Invariants in Galois Cohomology* Skip Garibaldi, Alexander Merkurjev, Jean-Pierre Serre, 2003 This volume addresses algebraic invariants that occur in the confluence of several important areas of mathematics including number theory algebra and arithmetic algebraic geometry The invariants are analogues for Galois cohomology of the characteristic classes of topology which have been extremely useful tools in both topology and geometry It is hoped that these new invariants will prove similarly useful Early versions of the invariants arose in the attempt to classify the quadratic forms over a given field The authors are well known experts in the field Serre in particular is recognized as both a superb mathematician and a master author His book on Galois cohomology from the 1960s was fundamental to the development of the theory Merkurjev also an expert mathematician and author co wrote The Book of Involutions Volume 44 in the AMS Colloquium Publications series an important work that

contains preliminary descriptions of some of the main results on invariants described here The book also includes letters between Serre and some of the principal developers of the theory It will be of interest to graduate students and research mathematicians interested in number theory

Galois Cohomology and Class Field Theory David Harari, 2020-06-24 This graduate textbook offers an introduction to modern methods in number theory It gives a complete account of the main results of class field theory as well as the Poitou Tate duality theorems considered crowning achievements of modern number theory Assuming a first graduate course in algebra and number theory the book begins with an introduction to group and Galois cohomology Local fields and local class field theory including Lubin Tate formal group laws are covered next followed by global class field theory and the description of abelian extensions of global fields The final part of the book gives an accessible yet complete exposition of the Poitou Tate duality theorems Two appendices cover the necessary background in homological algebra and the analytic theory of Dirichlet L series including the ebotarev density theorem Based on several advanced courses given by the author this textbook has been written for graduate students Including complete proofs and numerous exercises the book will also appeal to more experienced mathematicians either as a text to learn the subject or as a reference

Central Simple Algebras and Galois Cohomology Philippe Gille, Tamás Szamuely, 2006-08-10 This book is the first comprehensive modern introduction to the theory of central simple algebras over arbitrary fields Starting from the basics it reaches such advanced results as the Merkurjev Suslin theorem This theorem is both the culmination of work initiated by Brauer Noether Hasse and Albert and the starting point of current research in motivic cohomology theory by Voevodsky Suslin Rost and others Assuming only a solid background in algebra but no homological algebra the book covers the basic theory of central simple algebras methods of Galois descent and Galois cohomology Severi Brauer varieties residue maps and finally Milnor K theory and K cohomology The last chapter rounds off the theory by presenting the results in positive characteristic including the theorem of Bloch Gabber Kato The book is suitable as a textbook for graduate students and as a reference for researchers working in algebra algebraic geometry or K theory

Galois cohomology of algebraic number fields Klaus Haberland, 1978

Abelian Galois Cohomology of Reductive Groups Mikhail Borovoi, 1998 In this volume a new function $H^2_{\text{ab}}(K, G)$ of abelian Galois cohomology is introduced from the category of connected reductive groups G over a field K of characteristic 0 to the category of abelian groups The abelian Galois cohomology and the abelianization map $\text{ab}_1: H^1(K, G) \rightarrow H^2_{\text{ab}}(K, G)$ are used to give a functorial almost explicit description of the usual Galois cohomology set $H^1(K, G)$ when K is a number field

Sujatha, 2000 This book is based on the material presented in four lectures given by J Coates at the Tata Institute of Fundamental Research The original notes were modified and expanded in a joint project with R Sujatha The book discusses some aspects of the Iwasawa theory of elliptic curves over algebraic fields Let E be an elliptic curve defined over an algebraic number field F The fundamental idea of the Iwasawa theory is to study deep arithmetic questions about E/F via the study of coarser questions about the arithmetic of E over various infinite extensions of F **A Gentle Course in Local Class Field Theory** Pierre

Guillot, 2018-11-01 This book offers a self contained exposition of local class field theory serving as a second course on Galois theory It opens with a discussion of several fundamental topics in algebra such as profinite groups p adic fields semisimple algebras and their modules and homological algebra with the example of group cohomology The book culminates with the description of the abelian extensions of local number fields as well as the celebrated Kronecker Weber theory in both the local and global cases The material will find use across disciplines including number theory representation theory algebraic geometry and algebraic topology Written for beginning graduate students and advanced undergraduates this book can be used in the classroom or for independent study Introduction to Profinite Groups and Galois Cohomology Luis Ribes, 1970

Algebraic Number Theory H. Koch, Helmut Koch, 1997-09-12 From the reviews of the first printing published as Volume 62 of the Encyclopaedia of Mathematical Sciences The author succeeded in an excellent way to describe the various points of view under which Class Field Theory can be seen In any case the author succeeded to write a very readable book on these difficult themes Monatshefte fuer Mathematik 1994 Koch's book is written mostly for non specialists It is an up to date account of the subject dealing with mostly general questions Special results appear only as illustrating examples for the general features of the theory It is supposed that the reader has good general background in the fields of modern abstract algebra and elementary number theory We recommend this volume mainly to graduate students and research mathematicians Acta Scientiarum Mathematicarum 1993 **Introduction of profinite groups and Galois cohomology** Luis Ribes, 1970

Bernadette Perrin-Riou, 2000 Traditionally p -adic L functions have been constructed from complex L functions via special values and Iwasawa theory In this volume Perrin Riou presents a theory of p -adic L functions coming directly from p -adic Galois representations or more generally from motives This theory encompasses in particular a construction of the module of p -adic L functions via the arithmetic theory and a conjectural definition of the p -adic L function via its special values Since the original publication of this book in French see Ast risque 229 1995 the field has undergone significant progress These advances are noted in this English edition Also some minor improvements have been made to the text **Algebraic Groups and Number Theory** Vladimir Platonov, Andrei Rapinchuk, Rachel Rowen, 1993-12-07 This milestone work on the arithmetic theory of linear algebraic groups is now available in English for the first time Algebraic Groups and Number Theory provides the first systematic exposition in mathematical literature of the junction of group theory algebraic geometry and number theory The exposition of the topic is built on a synthesis of methods from algebraic geometry number theory analysis and topology and the result is a systematic overview of almost all of the major results of the arithmetic theory of algebraic groups obtained to date
