## **Game Theory As Theory Of Conflict Resolution:**

**Game Theory as a Theory of Conflict Resolution** Anatol Rapoport, 2012-12-06 Game theory could be formally defined as a theory of rational decision in conflict situations Models of such situations as they are conceived in game theory involve 1 a set of decision makers called players 2 a set of strategies available to each player 3 a set of outcomes each of which is a result of particular choices of strategies made by the players on a given play of the game and 4 a set of payoffs accorded to each player in each of the possible outcomes It is assumed that each player is individually rational in the sense that his preference ordering of the outcomes is determined by the order of magnitudes of his and only his associated payoffs Further a player is rational in the sense that he assumes that every other player is rational in the above sense The rational player utilizes knowledge of the other players payoffs in guiding his choice of strategy because it gives him information about how the other players choices are guided Since in general the orders of magnitude of the payoffs that accrue to the several players in the several outcomes do not coincide a game of strategy is a model of a situation involving conflicts of interests

in a new social theory a theory that is far from being completed even after recent advances in game theory as evidenced by the work of the three Nobel Prize winners John F Nash John C Harsanyi and Reinhard Selten Two of them Harsanyi and Selten have contributed important articles to the present volume This book leaves no doubt that the game theoretical models are on the right track to becoming a respectable new theory just like the great theories of the twentieth century originated from formerly separate models which merged in the course of decades For social scientists the age of great discoveries is not over The recent advances of today's game theory surpass by far the results of traditional game theory For example modern game theory has a new empirical and social foundation namely societal experiences this has changed its methods its rationality Morgenstern I worked together with him for four years dreamed of an encompassing theory of social behavior With the inclusion of the concept of evolution in mathematical form this dream will become true Perhaps the new foundation will even lead to a new name conflict theory instead of game theory
