Environmental Inequalities Andrew Hurley, 2009-11-30 By examining environmental change through the lens of conflicting social agendas Andrew Hurley uncovers the historical roots of environmental inequality in contemporary urban America Hurley's study focuses on the steel mill community of Gary Indiana a city that was sacrificed like a thousand other American places to industrial priorities in the decades following World War II Although this period witnessed the emergence of a powerful environmental crusade and a resilient quest for equality and social justice among blue collar workers and African Americans such efforts often conflicted with the needs of industry To secure their own interests manufacturers and affluent white suburbanites exploited divisions of race and class and the poor frequently found themselves trapped in deteriorating neighborhoods and exposed to dangerous levels of industrial pollution In telling the story of Gary Hurley reveals liberal capitalism's difficulties in reconciling concerns about social justice and quality of life with the

imperatives of economic growth He also shows that the power to mold the urban landscape was intertwined with the ability to govern social relations

**The Rise of the Urban South** Lawrence H. Larsen, 2021-12-14 Operating under an outmoded system of urban development and faced by the vicissitudes of the Civil War and Reconstruction southerners in the nineteenth century built a network of cities that met the needs of their society In this pioneering exploration of that intricate story Lawrence H. Larsen shows that in the antebellum period southern entrepreneurs built cities in layers to facilitate the movement of cotton First came the colonial cities followed by those of the piedmont the New West the Gulf Coast and the interior By the Civil War cotton could move by a combination of road rail and river through a network of cities for example from Jackson to Memphis to New Orleans to Europe In the Gilded Age building on past practices the South continued to make urban gains Men like Henry Grady of Atlanta and Henry Watterson of Louisville used broader regional objectives to promote their own cities Grady successfully sold Atlanta one of the most southern of cities demographically as a city with a northern outlook Watterson tied Louisville to national goals in railroad building The New South movement did not succeed in bringing the region to parity with the rest of the nation yet the South continued to rise along older lines By 1900 far from being a failure in terms of the general course of American development the South had created an urban system suited to its needs while avoiding the promotional frenzy that characterized the building of cities in the North Based upon federal and local sources this book will become the standard work on nineteenth century southern urbanization a subject too long unexplored

**City in a Garden** Andrew M. Busch, 2017-05-16 The natural beauty of Austin Texas has always been central to the city's identity From the beginning city leaders residents planners and employers consistently imagined Austin as a natural place

highlighting the region's environmental attributes as they marketed the city and planned for its growth. Yet as Austin modernized and attracted an educated and skilled labor force, the demand to preserve its natural spaces was used to justify economic and racial segregation. This effort to create and maintain a city in a garden perpetuated uneven social and economic power relationships throughout the twentieth century. In telling Austin's story, Andrew M. Busch invites readers to consider the wider implications of environmentally friendly urban development. While Austin's mainstream environmental record is impressive, its minority groups continue to live on the economic, social, and geographic margins of the city. By demonstrating how the city's midcentury modernization and progressive movement sustained racial oppression, restriction, and uneven development in the decades that followed, Busch reveals the darker ramifications of Austin's green growth.

**Sanitation in Urban Britain, 1560-1700** Leona J. Skelton, 2015-12-22 Popular belief holds that throwing the contents of a chamber pot into the street was a common occurrence during the early modern period. This book challenges this deeply entrenched stereotypical image as the majority of urban inhabitants and their local governors alike valued clean outdoor public spaces, vesting interest in keeping the areas in which they lived and worked clean. Taking an extensive tour of over thirty towns and cities across early modern Britain, focusing on Edinburgh and York as in-depth case studies, this book sheds light on the complex relationship between how governors organized street cleaning, managed waste disposal, and regulated the cleanliness of the outdoor environment top down, and how typical urban inhabitants self-regulated their neighbourhoods bottom up. The urban-rural manure trade, sanitation infrastructure, waste disposal technology, plague epidemics, contemporary understandings of malodours and miasmatic disease transmission, and urban agriculture are also analysed. This book will enable undergraduates, postgraduates, and established academics to deepen their understanding of daily life and sensory experiences in the early modern British town. This innovative work will appeal to social, cultural, and legal historians, as well as researchers of history of medicine and public health.
