**The Time Dimension** T K. Das,1990-04-17 This is the first comprehensive bibliography of temporal scholarship research on the subject of time and the phenomenon of time itself As the author notes in his introduction the nature of research insights on the subject of time is difficult to comprehend within the confines of any specific discipline since relevant materials are scattered throughout the literature in numerous scholarly fields By bringing together the most significant published works in a wide variety of disciplines this unique compendium enables scholars and researchers to look beyond their own particular area of expertise when selecting appropriate resource materials Throughout the focus is on the time dimension itself as a problematic or researchable phenomenon rather than on narrow topics such as time management time series analysis or forecasting Organized by discipline the work begins with an initial chapter that lists general works on the time dimension Nineteen chapters then list works in particular disciplines ranging from anthropology and culture to biology economics futures studies history linguistics management studies psychology and more The final chapter lists miscellaneous entries which could not be categorized into any of the specific disciplinary headings Within each chapter entries are arranged alphabetically by author or editor Nearly all sources are from scholarly journals and books

**Robert Michels, Political Sociology and the Future of Democracy** Juan Linz,2017-07-05 These essays by the brilliant historian of political science Juan Linz comprise a remarkable intellectual review of the life and work of Robert Michels his major book Political Parties and the dimensions of democracy as a functioning system Linz elucidates the importance of Michels in a way that offers more than a mechanical view of political parties as some sort of precisely ordered system of authority and influence Instead Michels offers a view of politics that is bottom up and untidy what he calls a reciprocal deference structure Michels is not simply the father of the iron law of oligarchy but the idea of politics as a less than orderly network of responsiveness responsibility and accountability Linz demonstrates with magisterial power why Michels must be ranked as a foremost thinker in classical political sociology The remaining three segments of the volume cover areas with which Linz has also long been identified Each in its own way illumines aspects of Michels as well Time and Regime Change articulates differences between change within a regime and change of a regime sometimes hard to identify because of the elongated time frames involved The next essay explains why Spain is neither a traditional society nor a successful modern nation The reliance upon central authority displaced the hoped for evolution of a society based on representative democratic institutions The final section Freedom and Autonomy of Intellectuals and Artists is a topic that gripped Michels and Linz alike Freedom as a goal of the intelligentsia has been frustrated by those who provide ideological justification for repression of ideas and actions in the name of higher values This segment provides a bridge between Michels and Weber not to mention both of these major figures with Linz himself The role of state power in mediating intellectual freedom is the leitmotif that blankets the twentieth century The work is graced by a full length bibliography o

**The Study of Time IV** J. T. Fraser,N. Lawrence,D.

Park,2012-12-06      *The Personal Experience of Time* B. Gorman,2013-03-09 The fundamental nature of human time experience has concerned artists poets philosophers and scientists throughout the ages Any consideration of human action requires awareness of its temporal aspects However simply to view time in the same units and dimensions as the physicist employs in describing events robs personal time of its lived quality The use of physical time concepts in the description of human events is often artificial and misleading It fails to account for the facts that human time estimates rarely match clock and calendar time that societies and individuals demonstrate vast differences in their constructions and uses of time and that temporal perceptions and attitudes change within an individual both during a single day and throughout his life span The present volume does not view time as something that is sensed in the same way that one would sense or perceive spatial or sensory stimuli Rather it views time as a complex set of personally experienced cognitive constructs used by individuals and cultures to account for the order the duration and the organization of events The authors in this book take a strong departure from earlier psychophysical studies of a time sense and address themselves to the uses and elaborations of time concepts in personal and social functioning      **Psychological and Social Factors in Drinking and Treatment and Treatment Evaluation** Morris E. Chafetz,1973      *The Stories We Are* William Lowell Randall,2014-01-01 William Lowell Randall explores the links between literature and life and speculates on the range of storytelling styles through which people compose their lives In doing so he draws on a variety of fields including psychology psychotherapy theology philosophy feminist theory and literary theory      **Time: A Bibliographic Guide** Samuel L. Macey,2018-10-10 Originally published in 1991 A multidisciplinary guide in the form of a bibliography of selected time related books and articles divided into 25 existing academic disciplines and about 100 subdisciplines which have a wide application to time studies      **The Me I Know** Susan Krauss Whitbourne,2012-12-06 For the last 5 years I have been living with 94 adults These 94 adults made up the sample of people in a study on adult development that Dale Dannefer and I began in 1980 This book represents my efforts to condense the almost 200 hours of tape recorded material from the 94 adults into a form that captures at least some of the diversity and also some of the commonalities in their answers to the question Who am I My version of their answers is based on their reflections about themselves as family members workers and people with a goal in life In arriving at the conclusion that adults attempt to see themselves as loved competent and good human beings I believe that I have done justice to these people and their answers to my interview questions Arriving at the point of being able to write about these 94 people's identities has not been an easy process Countless attempts at numerically based rating systems were tried and discarded progressively until finally I decided to read all the transcripts in sequence person by person rather than question by question What I found when I approached them as total individuals was surprising to me I found a vibrant theme of certainty and self assuredness in their identities that flew in the face of my previous ideas about developmental change in adulthood

*Re-opening Einstein's Thought* Conrad P. Pritscher,2008-01-01 During an interview conducted late in his life the

legendary Swedish Film director Ingmar Bergman was asked about the coming of age He likened aging to hiking up the side of a mountain the longer one walks the more winded one becomes he noted But he added the view Conrad Pritscher provides us with a breathtaking view of education as it is and can be one focal point of which is Albert Einstein s wise views on the subject     Routledge Library Editions: Philosophy of Time Various Authors,2021-03-05 Reissuing five works originally published between 1937 and 1991 this collection contains books addressing the subject of time from a mostly philosophic point of view but also of interest to those in the science and mathematics worlds These texts are brought back into print in this small set of works addressing how we think about time the history of the philosophy of time the measurement of time theories of relativity and discussions of the wider thinking about time and space among other aspects One volume is a thorough bibliography collating references on the subject of time across many disciplines     **Quantum Learning** Conrad P. Pritscher,2021-11-08 This book shows quantum learning is the resource that unites parts into wholes and then wholes into continually larger wholes Just as quantum computers can regard sub atomic particles as a wave and as particles quantum learning can understand learners as simultaneously nondual whole and dual part The study includes a reconsideration of clarity in expression and thought     **The Future of Time** Henri Marc Yaker,Humphry Osmond,Frances Cheek,1971 We all live in a relative universe and this book shows that we have only begun to explore some of the ideas we take most for granted The traditional linear concept of time prevalent for centuries of Western culture is now undergoing some serious re examination New lifestyles and sensory experiences are creating an awareness of new dimensions of time At this crucial point in history we should consider whether our futures are not closely associated with our ideas of the temporal dimension with the future of time itself These essays establish the groundwork for a re examination of our relation to time Is there such a thing as normal time How do distortions such as drugs or mental illness affect temporal perceptions How is time affected by the society we live in These and other intriguing questions are explored in this unique and provocative study inside flaps     **Managerial Planning** Charles S. Tapiero,2018-04-17 Originally published in 1977 Management is a dynamic process reflected in three essential functions management of time change and people The book provides a bridging gap between quantitative theories imbedded in the systems approach and managerial decision making over time and under risk The conventional wisdom that management is a dynamic process is rendered operational This title will be of interest to students of business studies and management     *Human Rights and World Public Order* Myres Smith McDougal,Harold Dwight Lasswell,Lung-chu Chen,2019 As a classic text of the New Haven School of International Law this book explores human rights and international law in the broadest sense taking into account social sciences research while embracing all values secured or consequently fulfilled or needed to thus be achieved The re issuance of this venerable title unveils this work to a new generation of scholars students and practitioners of international law and human rights     **The Mythological Traditions of Liturgical Drama** Christine Schnusenberg,2010 This unique comprehensive work tackles questions posed by

the polemics of the Church Fathers against the Roman theater and explores the subsequent developments of Western liturgical drama as a continuation of the Roman theater up to the time of Amalarius of Metz in the ninth century     How Young Are You? A. A. Kronik, 2018-09-18 His work is truly revolutionary He has taken the most important of existential experiences and made them transparent for self growth and research Linda Berg Cross PhD ABPP Professor of Psychology Howard University The main purpose of this research based self help book is to introduce the goal and causal theory of Psychological Time and to help you calculate your Psychological Age that is how old you feel based on significant events in your life You can also learn how to lower your psychological age feel younger using past experiences to move into the future rejuvenating the mind for more satisfying personal growth productivity and happiness We humans created the convention of Time hours days millennia But we also created Psychological Time which we can compress to survive an interminable wait for example or expand to luxuriate in pleasure So fully integrated into our brain is this Psychological Time that as part of the illusion we can lose touch with real chronological time altogether and even change the sequence of past events to contradict or override our otherwise communal understanding of the world In this book you will generate Causograms a kind of map that graphically represents your perception of the cause and effect and goal based connections that your mind naturally makes between life experiences These include but are not limited to achievements memories triggered by new experiences and expectations based on prior accomplishments This process allows you to re examine the relation between life events goals and personal interactions then compare your resulting Psychological Age to your chronological age What a wonderful approach to the human life cycle I am enjoying it immensely H Keith H Brodie MD James B Duke Professor of Psychiatry President Emeritus Duke University     Time, Self, and Social Being Patrick Baert, 1992 The main object of this book is to present the theoretical outline of a temporalized sociology that is a sociology which both takes novelty as its starting point and makes the link between the shorter and longer temporal spans This temporalized sociology draws upon a variety of sources Firstly it builds on the legacy of four theoretical traditions positivism functionalism structuralism and ethnomethodology Although these four traditions are criticized for failing to take a temporalized perspective themselves they yet offer a number of fruitful ideas and concepts which form the basis of this author s approach The core of the argument for a secondary but not unimportant aim is to demonstrate the contemporary significance of G H Mead s writings     *Catalog of Copyright Entries. Third Series* Library of Congress. Copyright Office, 1973     Brains Inventing Themselves Conrad P. Pritscher, 2012-01-01 Neuroscience has found that neuroplasticity of brain cells allows brains to invent themselves Remodeling of brains can be facilitated by schools and universities What may be done to accelerate that positive inventing so as to prepare for rapidly accelerating change As an IBM advertisement reads It is time to ask smarter questions This book helps the reader do that What is worse than being blind to something Being blind to your blindness says Eric Haseltine who has worked for both Disney and the National Security Agency Being blind to what our brains can do is slowly changing Brain

researchers recently found that we can now be our own subjects of brain experimentation Research shows how one can change one s brain by changing one s mind In her 2010 high school valedictorian speech Erica Goldson courageously said The majority of students are put through the same brainwashing techniques in order to create a complacent labor force working in the interests of large corporations and secretive government and worst of all they are completely unaware of it This book shows professors teachers parents and interested citizens how students can become aware and reach higher levels of consciousness      **Toward a Cultural Theory of Education and Schooling** Frederick Gearing, Lucinda Sangree, 2011-06-03 No detailed description available for Toward a Cultural Theory of Education and Schooling
