Surface Operations in Petroleum Production, II J.O. Robertson, G.V. Chilingarian, S. Kumar, 1989-07-01 This second volume of Surface Operations in Petroleum Production complements and amplifies Volume I which appeared in 1987 and covered several aspects of oilfield technology This second volume presents a detailed theoretical and practical exposition of surface oilfield practices including gas flow rate measurement cementing fracturing acidizing and gravel packing In today's era of specialization these operations are generally left to service companies denying field engineers and company managers direct detailed knowledge of the specific surface and subsurface operations This book presents a comprehensive analysis which may be used by field engineers to analyze technical problems specify the required surface and subsurface operations and closely supervise the service company's work and post treatment operation of the well Another subject which has great economic consequences in all oilfields is corrosion of equipment The book presents a comprehensive analysis of the theory of corrosion in the oilfield and methods that have proved effective for the retardation or elimination of corrosion Quality control of injection waters is then covered Three more topics are addressed the first is offshore technology which is presented with reference to onshore oilfield operations making a lucid presentation for field engineers who have no practical knowledge of the subject The second is pollution control an area of oilfield management which has assumed widespread importance in recent years The last topic covered is the subject of underground storage of gas and oil Underground fuel storage and retrieval is an active area of oilfield production management that utilizes the technology presented in this entire treatise

Geological Survey Circular ,1978 *Assessment of Geothermal Resources of the United States--1978* ,1979 Energy Abstracts for Policy Analysis ,1978 *The Supply of Petroleum Reserves in South-East Asia* Corazón Morales Siddayao,2013-03-13 which may be termed political risks may be important deterrents of investment After taking such risks into consideration in the exploration and development stage a firm computing the present value of its probable income stream must consider several other factors In addition to the current rate of production it must consider these 1 engineering limits to the rate of extraction in any given period 2 physical limits to the total amount of the resource that can be produced within a given location and 3 limits to the availability of new petroleum sources at the same costs as at the present location It might be useful at this point to note that the firm as an exploration agent in South East Asia operates largely as a contractor to the host government who has ownership and final control over the petroleum resources The group of suppliers of petroleum reserves in the region is characterized by the presence of the major companies directly or through subsidiaries as well as by many smaller and even independent companies Three major companies currently dominate exploration and producing operations in two countries Exxon and Shell in Malaysia Shell in Brunei In Indonesia Caltex and Stanvac dominate production Outside Malaysia and Brunei the bulk of new exploration is conducted by relatively smaller companies side by side with the major companies like Exxon Gulf Mobil Shell and Texaco

exploiting alternative sources of oil and gas The book first covers the essential features of developing coal gasification and coal liquefaction technologies and then proceeds to discussing the results of a detailed evaluation of technologies for shale oil recovery The last article discusses the assessment of research areas that affect the prospects for oil recovery from oil sources and tar sands The book will be of great use to researchers and practitioners of disciplines involved in the fuel industry

Dynamics of Oil and Gas Accumulations Alain Perrodon, 1983 Sciences de la terre *Computing Risk for Oil Prospects: Principles and Programs* J.W. Harbaugh, J.C. Davis, J. Wendebourg, 1995-11-22 The petroleum industry is enduring difficult financial times because of the continuing depressed price of crude oil on the world market This has caused major corporate restructuring and reductions in staff throughout the industry Because oil exploration must now be done with fewer people under more difficult economic constraints it is essential that the most effective and efficient procedures be used *Computing Risk for Oil Prospects* describes how prospect risk assessment predicting the distribution of financial gains or losses that may result from the drilling of an exploration well can be done using objective procedures implemented on personal computers The procedures include analyses of historical data interpretation of geological and geophysical data and financial calculations to yield a spectrum of the possible consequences of decisions All aspects of petroleum risk assessment are covered from evaluating regional resources through delineating an individual prospect to calculation of the financial consequences of alternative decisions and their possible results The bottom lines are given both in terms of the probable volumes of oil that may be discovered and the expected monetary returns Statistical procedures are linked with computer mapping and interpretation algorithms which feed their results directly into routines for financial analysis The programs in the included library of computer programs are tailored to fit seamlessly together and are designed for ease and simplicity of operation The two diskettes supplied are IBM compatible Full information on loading is given in Appendix A Software Installation Risk I diskette contains data files and executables and Risk 2 diskette contains only executables The authors contend that the explorationist who develops a prospect should be involved in every facet of its analysis including risk and financial assessments This book provides the tools necessary for these tasks **Incentives for Developing New Energy Sources** United States.
