**Uncertainty Management in Information Systems** Amihai Motro,Philippe Smets,2012-12-06 As its title suggests Uncertainty Management in Information Systems is a book about how information systems can be made to manage information permeated with uncertainty This subject is at the intersection of two areas of knowledge information systems is an area that concentrates on the design of practical systems that can store and retrieve information uncertainty modeling is an area in artificial intelligence concerned with accurate representation of uncertain information and with inference and decision making under conditions infused with uncertainty New applications of information systems require stronger capabilities in the area of uncertainty management Our hope is that lasting interaction between these two areas would facilitate a new generation of information systems that will be capable of servicing these applications Although there are researchers in information systems who have addressed themselves to issues of uncertainty as well as researchers in uncertainty modeling who have considered the pragmatic demands and constraints of information systems to a large extent there has been only limited interaction between these two areas As the subtitle From Needs to Solutions indicates this book presents view points of information systems experts on the needs that challenge the uncertainty capabilities of present information systems and it provides a forum to researchers in uncertainty modeling to describe models and systems that can address these needs

**Methods for Handling Imperfect Spatial Information** Robert Jeansoulin, Odile Papini, Henri Prade, Steven Schockaert, 2010-10-04 Spatial information is pervaded by uncertainty Indeed geographical data is often obtained by an imperfect interpretation of remote sensing images while people attach ill defined or ambiguous labels to places and their properties As another example medical images are often the result of measurements by imprecise sensors e g MRI scans Moreover by processing spatial information in real world applications additional uncertainty is introduced e g due to the use of interpolation extrapolation techniques or to conflicts that are detected in an information fusion step To the best of our knowledge this book presents the first overview of spatial uncertainty which goes beyond the setting of geographical information systems Uncertainty issues are especially addressed from a representation and reasoning point of view In particular the book consists of 14 chapters which are clustered around

three central topics The first of these topics is about the uncertainty in meaning of linguistic descriptions of spatial scenes Second the issue of reasoning about spatial relations and dealing with inconsistency in information merging is studied Finally interpolation and prediction of spatial phenomena are investigated both at the methodological level and from an application oriented perspective The concept of uncertainty by itself is understood in a broad sense including both quantitative and more qualitative approaches dealing with variability epistemic uncertainty as well as with vagueness of terms
