## **Galactic Astrophysics And Gamma Ray Astronomy:**

**Galactic Astrophysics and Gamma-Ray Astronomy** G.E. Morfill,R. Buccheri,2012-12-06 This book contains the invited and contributed lectures presented at a meeting organised in the context of the XVIII general assembly of the IAU held in Patras August 19 1982 Roughly one hundred scientists attended this meeting the discussions were lively sometimes heated and the original time span allocated to the meeting was as a result comfortably exceeded by about 50 % The aim of this meeting was to determine the role of galactic gamma ray astronomy within the general concept of galactic astrophysics The timing at the end of the COS B mission was regarded as opportune because it gives interested astrophysicists the possibility for interdisciplinary studies using the existing gamma ray data base e.g. comparison with infrared radio X ray etc. astronomies as well as for theoretical studies The next generation of gamma ray detectors will probably not be in operation for another 5 to 10 years and therefore it is hoped that the proceedings of this meeting can be used in the intermediate time as a basis for further studies as a stimulation for more theoretical work and as an important contribution for defining the aims and operation of future gamma ray missions The interrelationship with other branches of astronomy the astrophysical implications and the study of relevant physical processes using available measurements in the near Earth environment were important results of the meeting Many persons contributed to the success of the meeting in particular all those who either presented a contribution and or took part in the discussions

### **The Universe in Gamma Rays** Volker

Schönfelder,2013-03-14 Gamma ray astronomy began in the mid 1960s with balloon satellite and at very high photon energies also with ground based instruments However the most significant progress was made in the last decade of the 20th century when the three satellite missions SIGMA Compton and Beppo Sax gave a completely new picture of our Universe and made gamma ray astronomy an integral part of astronomical research This book written by well known experts gives the first comprehensive presentation of this field of research addressing both graduate students and researchers Gamma ray astronomy helps us to understand the most energetic processes and the most violent events in the Universe After describing cosmic gamma ray production and absorption the instrumentation used in gamma ray astronomy is explained The main part of the book deals with astronomical results including the somewhat surprising result that the gamma ray sky is continuously changing

**Astronomy** P. V. Ramana Murthy, A. W. Wolfendale, 1993-04 The recent launch of NASA's Gamma Ray Observatory will increase interest in gamma ray astronomy This is a fully up dated new edition of the authors earlier volume published in 1986 and covers both the background science and the current state of the art in this field The emphasis is on the astronomy and astrophysics of known sources of cosmic gamma rays outside the solar system The authors discuss the mechanisms for the production and absorption of gamma rays The gamma ray line astronomy of the interstellar medium galactic centre and various discrete sources is then considered Gamma ray bursts are treated in considerable detail in chapter three and the final two chapters describe medium energy and ultra high energy gamma rays Relevant data from supernova SN1987A is also included in this edition The book includes comprehensive references to the primary literature together with many figures and tables The concentration on phenomenology makes this book a fine introduction to gamma ray astronomy The Gamma Ray Sky with Compton GRO and SIGMA M. Signore, P. Salati, G. Vedrenne, 2012-12-06 This volume consists of invited lectures and seminars presented at the NATO Advanced Study Institute The Gamma Ray Sky with COMPTON GRO and SIGMA which was held at the Centre de Physique Theorique of Les Houches France in January February 1994 The school has been planned by a Scientific Organizing Committee It was organized with the aim of providing students and young researchers with an up to date account of the high energy phenomena in the vicinity of compact objects and the diffuse gamma ray backgrounds after the early results from the gamma ray telescope SIGMA and the four instruments onboard COMPTON GRO Gamma Ray Observatory BATSE Burst and Transient Source Experiment COMPTEL Compton Telescope EGRET Energetic Gamma Ray Experiment Telescope and OSSE Oriented Scintillation Spectrometer Experiment It was attended by more than sixty researchers from many countries The lectures and seminars represent a complete coverage of our present knowledge and understanding of Gamma ray backgrounds Gamma ray Bursts Active Galactic Nuclei Galactic Compact Objects Gamma ray Spectroscopy Instrumentation and observation techniques etc Most of these lectures are reproduced in this volume Unfortunately a few lecturers have chosen not to submit their manuscript **Cosmic Gamma-Ray Sources** Ka Lok Cheng, Gustavo E. Romero, 2004-10-25 Gamma ray astronomy has undergone an enormous progress in the last 15 years The success of satellite experiments like NASA's Compton Gamma Ray Observatory and ESA's INTEGRAL mission as well as of ground based instruments have opened new views into the high energy Universe Different classes of cosmic gamma ray sources have been now detected at different energies in addition to young radio pulsars and gamma ray bursts the classical ones The new sources include radio quiet pulsars microquasars supernova remnants starburst galaxies radio galaxies flat spectrum radio quasars and BL Lacertae objects A large number of unidentified sources strongly suggests that this brief enumeration is far from complete Gamma ray bursts are now established as extragalactic sources with tremendous energy output There is accumulating evidence supporting the idea that massive stars and star forming regions can accelerate charged particles up to relativistic energies making them gamma ray sources Gamma ray astronomy

has also proved to be a powerful tool for cosmology imposing constraints to the background photon fields that can absorb the gamma ray flux from distant sources. All this has profound implications for our current ideas about how particles are accelerated and transported in both the local and distant Universe. The evolution of our knowledge on the gamma ray sky has been so fast that it is not easy for the non-specialist scientist and the graduate student to be aware of the full potential of this field or to grasp the fundamentals of a given topic in order to attempt some original contribution.

Galactic Astrophysics and Gamma-Ray Astronomy International Astronomical Union, Very High Energy Cosmic Gamma Radiation Felix A. Aharonian, 2004. Gamma ray astronomy, the branch of high energy astrophysics that studies the sky in energetic gamma ray photons, is destined to play a crucial role in the exploration of nonthermal phenomena in the Universe in their most extreme and violent forms. This book presents the motivations and highlights the principal objectives of the field as well as demonstrates its intrinsic links to other branches of high energy astrophysics. Preference is given to three topical areas: i) origin of cosmic rays ii) physics and astrophysics of relativistic jets iii) observational gamma ray cosmology. Also, a significant part of the book is devoted to the discussion of the principal mechanisms of production and absorption of energetic gamma rays in different astrophysical environments as well as to the description of the detection methods of high energy cosmic gamma radiation.

TeV Gamma-Ray Astrophysics Heinrich J. Völk, Felix A. Aharonian, 2012-12-06. The International Heidelberg Workshop on TeV Gamma Ray Astrophysics brought together astrophysicists from the various fields which play a role in the formation of high energy gamma ray emission. In particular, theoretical and observational aspects of the physics and astrophysics of pulsars and quasars, the acceleration of particles at Supernova Remnants and other strong astrophysical shock fronts and cascade processes in universal background photon fields were comprehensively discussed in more than thirty reviews by leading experts. In their entirety, these reviews describe the birth of a new field of astronomy. This field concerns cosmic gamma rays of very high energy which are observed with ground-based optical telescopes due to the Cherenkov emission of the secondary particles created by the interaction of these gamma rays with atoms in the Earth's atmosphere. Beyond that, the workshop encompassed the latest developments and trends in theory and observation of cosmic gamma ray sources of all energies from nuclear gamma ray lines in the MeV region through the Bremsstrahlung Inverse Compton and pion decay continuum emission to gamma rays due to the decay of exotic relics from the early Universe. Audience: Specialists as well as students in physics and astrophysics and young research workers.

**Handbook of X-ray and Gamma-ray Astrophysics** Cosimo Bambi, Andrea Santangelo, 2024-02-29. This book highlights a comprehensive coverage of X-ray and Gamma-ray astrophysics. The first and the second parts discuss respectively X-ray and Gamma-ray experimental techniques and observatories. The third part is devoted to science including galactic and extragalactic sources. The fourth and last parts are dedicated to analysis techniques in X-ray and Gamma-ray astronomy: spectral analysis, imaging analysis, timing analysis, and polarimetric analysis. Presenting the state of the art in X-ray and gamma-ray astronomy, this is both a valuable

book for students and an important reference resource for researchers in the field *Gamma-ray Astrophysics* Floyd William Stecker, Jacob I. Trombka, 1973 Conference papers on gamma ray astrophysics are summarized Data cover the energy region from about 0.3 MeV to a few hundred GeV and theoretical models of production mechanisms that give rise to both galactic and extragalactic gamma rays

**Advances In Very High Energy Astrophysics: The Science Program Of The Third Generation IACTs For Exploring Cosmic Gamma Rays** Reshmi Mukherjee, Roberta Zanin, 2024-09-03 Very high energy astrophysics studies the most energetic photons in the sky allowing the exploration of violent and extreme non thermal phenomena in the Universe Significant advances in knowledge have been made in this field using ground based imaging atmospheric Cherenkov telescopes IACTs as detectors to study these physical processes in the Universe This book reviews the progress in the field since the advent of the second generation IACTs around 2004 Going through the scientific highlights obtained by the three current instruments of this kind H E S S MAGIC and VERITAS operating now for more than 15 years this book presents a state of the art knowledge in four areas of modern astrophysics and cosmology namely the origin of the cosmic rays the physics of compact objects and their resulting relativistic outflows gamma ray cosmology and the search for dark matter Along with a detailed review of the outstanding scientific outcomes a summary of the key technological developments that yielded the recognized success of the technique is also provided This book is written for early career academics in the fields of astrophysics high energy physics and cosmology At the same time it can serve as a source of reference for the expert in the field

**X- and Gamma-Ray Astronomy** H. Bradt, R. Giacconi, 2012-12-06 The IAU Symposium No 55 on X Ray and Gamma Ray Astronomy has occurred not entirely by coincidence at an important moment in the development of these new branches of observational astronomy In X ray astronomy the data from the first X ray observatory UHURU have contributed to a new view of the X ray sky and a new conception of the nature and properties of galactic and extragalactic X ray sources In gamma ray astronomy the exciting and often controversial nature of the results underlines the importance of the forthcoming launch of SAS B the first orbiting gamma ray observatory As Bruno Rossi reminds us p I the Symposium occurred almost exactly ten years after the first detection of the X ray star Sco X 1 During this time we have moved from the detection of a handful of the nearest and brightest sources to the detailed study of the nature of stellar sources in the farthest reaches of our own galaxy and in external galaxies of the local group The detection of pulsating X ray sources in binary systems permits the measurement of pulsation periods and orbital parameters with precisions comparable to any yet achieved with traditional observational techniques The strong indications that most X ray sources are extremely compact objects give us confidence that X ray astronomy will play a significant and possibly decisive role in the study of stars near the end point of stellar evolution

Gamma-Ray Astronomy E.L. Chupp, 2012-12-06 Observation of discrete energy electromagnetic emissions from celestial objects in the radio IR optical IN and X ray spectral regions has dramatically advanced our knowledge in the field of astrophysics It is expected that identification of nuclear gamma ray line emissions from any

cosmic source would also prove to be a powerful new tool for probing the Universe Since the publication of Morrison's work in 1958 many experiments were carried out searching for evidence of  $\gamma$  ray lines from cosmic sources however with little success Only a few positive experimental results have been reported in spite of an expenditure of considerable effort by many people in particular the possible Galactic Center emission line 473 to 530keV and  $\gamma$  ray lines at several energies e.g. 0.5 MeV and 2.2 MeV associated with large solar flares Both of these observations are unconfirmed by independent observations ca 1975 The high energy  $\gamma$  rays 30MeV from the Galactic Center are at least partly due to the decay of  $\pi^0$  mesons which are of unique energy 67.5 MeV in the  $\pi^0$  rest frame only The reasons for the limited amount of data available in this field even though early theoretical predictions were very optimistic regarding fluxes of nuclear lines are that experimental efforts are plagued with high backgrounds and low fluxes and that development of instruments with telescopic properties in the energy range of interest is difficult
