Game Theory in International Economics John McMillan, 2001 This book gives an early demonstration of applications of game theory to international economics applications that were to transform this area during the 1990s Game Theory in International Economics J. McMillan, 2013-06-17 This book gives an early demonstration of applications of game theory to international economics applications that were to transform this area during the 1990s **International Economics I.** John McMillan, Earl L. Grinols, Motoshige Itoh, Takashi Negishi, 2001 Most economic activity involves cross border transactions at some point in the supply chain The volumes reprinted here offer a wide range of perspectives on one of the most important areas of economics **Applied General Equilibrium and Economic Development** Jean Mercenier, T. N. Srinivasan, 1994 Traditional tools of analysis that focus on particular commodities or sectors a particular time frame and aggregate diverse socioeconomic groups are ill suited to analyze the consequences of the economic reforms of the last ten years This volume shows the greater power and relevance of applied general equilibrium methods Through discussion of several major policy issues agricultural and food policy economies of scale in production and the associated market imperfections macrostabilization programs and modeling intertemporal tradeoffs the contributors present work representative of the major trends in applied general equilibrium modeling of developing country issues Policy analysis using a rich variety of static recursive and intertemporal dynamic models is illustrated with problems from a number of developing countries in Africa Asia and Latin America The countries studied range widely in their institutional features stages of development and economic size BOOK JACKET Title Summary field provided by Blackwell North America Inc All Rights Reserved Journal of International Economics , 1986 Dynamic Policy Games in Economics F. van der Ploeg, A.J. de Zeeuw, 2014-06-28 The aim of this volume is to consider intertemporal and strategic issues in the formulation of economic policy so that dynamic game methodology is appropriate When changes in economic policy are evaluated the reactions and expectations of other economic agents cannot be ignored and in a dynamic setting issues like time inconsistency subgame perfectness reputation and information become important The papers contained in this volume are the revised versions of those presented at a conference held in 1988 at Tilburg University The Netherlands They include methodological contributions and strategic analyses of macroeconomic policy resource economics international policy coordination and the arms race **Economic Theory and International Trade** Wilhelm Neufeind, Raymond G. Riezman, 2012-12-06 This volume contains papers on Economic Theory and International Trade The papers on Economic Theory cover the existence and structure of competitive equilibrium in various settings non convexities non transitivity of preferences and absence of differentiability or free disposal assumptions the role of the compensating variation as a welfare measure oligopoly under bounded rationality and regulation of a public utility The papers on International Trade offer analyses of the Dutch disease or the Atlantic Slave Trade or treat the influence of economic growth on import demand the terms of trade and other economic

variables as well as theoretical and empirical evidence for the validity of the Heckscher Ohlin model The papers rigorous and often requiring mathematical sophistication variously reflect Trout Rader s work *Monetary Economics in Globalised Financial Markets* Ansgar Belke,Thorsten Polleit,2011-06-14 This book integrates the fundamentals of monetary theory monetary policy theory and financial market theory providing an accessible introduction to the workings and interactions of globalised financial markets Includes examples and extensive data analyses *Complex Economics* Alan Kirman,2010-09-13 The economic crisis is also a crisis for economic theory Most analyses of the evolution of the crisis invoke three themes contagion networks and trust yet none of these play a major role in standard macroeconomic models What is needed is a theory in which these aspects are central The direct interaction between individuals firms and banks does not simply produce imperfections in the functioning of the economy but is the very basis of the functioning of a modern economy This book suggests a way of analysing the economy which takes this point of view The economy should be considered as a complex adaptive system in which the agents constantly react to influence and are influenced by the other individuals in the economy In such systems which are familiar from statistical physics and biology for example the behaviour of the aggregate cannot be deduced from the behaviour of the average or representative individual Just as the organised activity of an ants nest cannot be understood from the behaviour of a representative ant so macroeconomic phenomena should not be assimilated to those associated with the representative agent This book provides examples where this can clearly be seen The examples range from Schelling s model of segregation to contributions to public goods the evolution of buyer seller relations in fish markets to financial models based on the foraging behaviour of ants The message of the book is that coordination rather than efficiency is the central problem in economics How do the myriads of individual choices and decisions come to be coordinated How does the economy or a market self organise and how does this sometimes result in major upheavals or to use the phrase from physics phase transitions The sort of system described in this book is not in equilibrium in the standard sense it is constantly changing and moving from state to state and its very structure is always being modified The economy is not a ship sailing on a well defined trajectory which occasionally gets knocked off course It is more like the slime described in the book emergence constantly reorganising itself so as to slide collectively in directions which are neither understood nor necessarily desired by its components Regional and Urban Economics Parts 1 & 2 Richard J. Arnott,2013-06-20 A collection of the first section of the Fundamentals of Pure and Applied Economics series Regional and Urban Economics Parts One and Two is an encyclopaedia containing eight titles This volume highlights original contributions in regional and urban economics concentrating mainly on urban economic theory The contributions focus on the treatment of space in economic theory Drawing on the body of literature developed by Von Thunen Christaller and Losch these chapters explore empirical theoretical and applied aspects of urban and regional economics which can be divided into the following areas Location Theory Jean Jaskold Gabszewicz Jacques Francois Thisse Masahisa Fujita and Urs Schwiezer Urban Public Finance David E
