Garbage Housing , 1973 Radical Pedagogies Beatriz Colomina, Ignacio G. Galán, Evangelos Kotsioris, Anna-Maria Meister, 2022-05-31 Experiments in architectural education in the post World War II era that challenged and transformed architectural discourse and practice In the decades after World War II new forms of learning transformed architectural education These radical experiments sought to upend disciplinary foundations and conventional assumptions about the nature of architecture as much as they challenged modernist and colonial norms decentered building imagined new roles for the architect and envisioned participatory forms of practice Although many of the experimental programs were subsequently abandoned terminated or assimilated they nevertheless helped shape and in some sense define architectural discourse and practice This book explores and documents these radical pedagogies and efforts to defy architecture's status quo The experiments include the adaptation of Bauhaus pedagogy as a means of unlearning under the conditions of decolonization in Africa a movement to design for every body including the disabled by architecture students and faculty at the University of California Berkeley the founding of a support network for women interested in the built environment regardless of their academic backgrounds and a design studio in the USSR that offered an alternative to the widespread functionalist approach in Soviet design Viewed through their dissolution and afterlife as well as through their founding stories these projects from the last century raise provocative questions about architecture's role in the new century *The Culture of Nature in the History of Design* Kjetil Fallan, 2019-03-26 The Culture of Nature in the History of Design confronts the dilemma caused by design's pertinent yet precarious position in environmental discourse through interdisciplinary conversations about the design of nature and the nature of design Demonstrating that the deep entanglements of design and nature have a deeper and broader history than contemporary discourse on sustainable design and ecological design might imply this book presents case studies ranging from the eighteenth to the twenty first century and from Singapore to Mexico It gathers scholarship on a broad range of fields practices from urban planning landscape architecture and architecture to engineering design industrial design furniture design and graphic design From adobe architecture to the atomic bomb from the bonsai tree to Biosphere 2 from pesticides to photovoltaics from rust to recycling the culture of nature permeates the history of design As an activity and a profession always operating in the borderlands between human and non human environments design has always been part of the environmental problem whilst also being an indispensable part of the solution The book ventures into domains as diverse as design theory research pedagogy politics activism organizations exhibitions and fiction and trade literature to explore how design is constantly making and unmaking the environment and conversely how the environment is both making and unmaking design This book will be of great interest to a range of scholarly fields from design education and design history to environmental policy and environmental history Current Housing Reports , 1984 *Design Commons*

Gerhard Bruyns, Stavros Kousoulas, 2022-05-17 This book directly links the notion of the commons with different design praxes and explores their social cultural and ecological ramifications It draws out material conditions in four areas of design interest social design commons and culture ecology and transdisciplinary design As a collection of positions the diversity of arguments advances the understanding of the commons as both concepts and modes of thinking and their material translation when contextualised in the domain of design questions In other words it moves abstract social science concepts towards concrete design debates This text appeals to students researchers and practitioners working on design in architecture architecture theory urbanism and ecology

Non-Plan: Essays on Freedom, Participation and Change in Modern Architecture and Urbanism Jonathan Hughes, Simon Sadler, 2013-01-11 Non Plan explores ways of involving people in the design of their environments a goal which transgresses political categories of right and left Attempts to circumvent planning bureaucracy and architectural inertia have ranged from free market enterprise zones to self build housing and from squatting to sophisticated technologies of prefabrication Yet all have shared in a desire to let people shape the built environment they want to live and work in How can buildings better reflect the needs of their inhabitants How can cities better facilitate the work and recreation of their many populaces Modernism had promised a functionalist approach to resolving the architectural needs of the twentieth century yet the design of cities and buildings often appears to confound the needs of those who use them their design and layout being highly regulated by restrictive legislation planning controls and bureaucracy Non Plan considers the theoretical and conceptual frameworks within which architecture and urbanism have sought to challenge entrenched boundaries of control focusing on the architectural history of the post war period to the present day This provocative book will be of interest to architects planners and students of architecture design town planning and architectural history Its contributors include architects critics and historians including many whose work helped shape the Non Plan debate during the period List of contributors Cedric Price Benjamin Franks Elizabeth Lebas Eleonore Kofman Ben Highmore Yona Friedman Paul Barker Clara Greed Barry Curtis Colin Ward Ian Horton John Beck Chinedu Umenyilora and Malcolm Miles

The New Eco-Architecture: Alternatives from the Modern Movement Colin Porteous, 2013-10-11 The New Eco Architecture builds a historical bridge between architectural science and design It seeks to address neglected aspects of the Modern Movement as a prelude to supporting a diversity of architectural insight and experimentation aimed at twenty first century environmental needs and priorities The attitudes and influences of renowned figures are re examined in relation to current issues of architectural sustainability By setting today's green architectural quest within a twentieth century context and evaluating the main protagonists with regard to a modern eco sensitive lineage the book will be of primary interest to architectural students academics and practitioners However it should also intrigue historians

theoreticians and critics who tend to gloss over such issues as well as other disciplines engaged with the built environment

Oppositions Reader K. Michael Hays, 1998 In its eleven year history *Oppositions* the journal of the New York based Institute for Architecture and Urban Studies IAUS had an impact far beyond what its modest cover might suggest. Indeed *Oppositions* set the agenda introduced the key players and published the seminal pieces in the theorization of architecture in the last twenty years. It is a testament to the enduring importance of the journal that its issues are still highly sought after today prized and priced as collector's items and found behind the desk at virtually every architectural library. *Oppositions Reader* collects the most important essays from 26 issues of *Oppositions*. Essays from the editors of the series Peter Eisenman, Kenneth Frampton, Mario Gandelsonas, Anthony Vidler and Kurt Forster are included along with texts by such noted architects, theorists and historians as Aldo Rossi, Alan Colquhoun, Leon Krier, Denise Scott Brown, Bernard Tschumi, Rem Koolhaas, Mary McLeod, Giorgio Ciucci and Rafael Moneo. The page design by Massimo Vignelli has been faithfully reproduced. Harvard Professor K. Michael Hays has selected the writings for inclusion. Contributors include Diana Agrest, Stanford Anderson, Giorgio Ciucci, Stuart Cohen, Alan Colquhoun, Francesco Dal Co, Peter Eisenman, William Ellis, Kurt W. Forster, Kenneth Frampton, Mario Gandelsonas, Giorgio Grassi, Fred Koetter, Rem Koolhaas, Leon Krier, Mary McLeod, Rafael Moneo, Joan Ockman, Martin Pawley, Aldo Rossi, Colin Rowe, Denise Scott Brown, Jorge Silvetti, Ignasi de Sol, Morales Manfredo Tafuri, Bernard Tschumi, Anthony Vidler and Hajime Yatsuka. It is an understatement to say that this volume is indispensable for any scholar or student interested in contemporary architectural theory.

The Architecture of Waste Caroline O'Donnell, Dillon Pranger, 2020-11-16 Global material crises are imminent. In the very near future recycling will no longer be a choice made by those concerned about the environment but a necessity for all. This means a paradigm shift in domestic behavior. Manufacturing, construction and design is inevitable. *The Architecture of Waste* provides a hopeful outlook through examining current recycling practices, rethinking initial manufacturing techniques and proposing design solutions for second lives of material objects. The book touches on a variety of inescapable issues beyond our global waste crisis including cultural, politics, economics, manufacturing, marketing and material science. A series of crucial perspectives from experts cover these topics and frames the research by providing a past, present and future look at how we got here and where we go next: the historical, the material and the design. Twelve design proposals look beyond the simple application of recycled and waste materials in architecture, an admirable endeavor but one that does not engage the urgent reality of a circular economy by aiming to transform familiar yet flawed material objects into closed loop resources. Complete with over 150 color images and written for both professionals and students, *The Architecture of Waste* is a necessary reference for rethinking the traditional role of the architect and challenging the discipline to address urgent material issues within the larger design process.

Transportable Environments Robert Kronenburg, 2013-04-03 Transportable Environments explores aspects of the historical and theoretical basis for portable architecture and provides an insight into the wide range of functions that it is used for today the varied forms that it takes and the concerns and ideas for its future development Written by a team of international commentators this volume provides a state of the art survey of this specialist area and will be of interest to a wide range of professionals across the construction and design industries

The Idea of Waste John Scanlan, 2025-03-15 A compelling rumination on detritus as an essential meaningful yet often problematic facet of human existence This book starts with the premise that waste is inevitable in human society and ends with a meditation on its inevitability The Idea of Waste explores how we have grappled with both the material reality and the specter of this shapeshifting phenomenon throughout history utilizing it dreaming of overcoming it yet never escaping it John Scanlan explores what waste is and why it seems to be intrinsic to human life at every turn in every age and epoch Finally he demonstrates how waste never disappears but rather only proliferates anew Scanlan s compelling narrative shows waste to be both an enduring material consequence of human activity and an idea or state of being
