Carson, 1999-09-24 This volume contains the proceedings of the International Symposium on Embryo Implantation Molecular Cellular and Clinical Aspects held from October 3-6 1997 in Newport Beach California Internationally recognized experts discuss the development and future of human in vitro fertilization and embryo implantation the cellular aspects of implantation hormonal regulation molecular markers of receptivity trophoblast factors primate models and animal studies and transcriptional regulation of maternal fetal recognition **The Art & Science of Assisted Reproductive Techniques (ART)** Gautam N Allahbadia, 2017-07-17 This second edition has been extensively revised to bring clinicians fully up to date with the latest technologies and advances in the field of assisted reproductive techniques ART Each section is dedicated to a sub specialty from polycystic ovary syndrome ART procedures and laboratory issues to implantation cryopreservation endoscopy ultrasound and more A section entitled contemporary thoughts examines the improvement of IVF outcome ART and older women and HIV and ART and another discusses third party reproduction Edited by internationally recognised experts in reproductive medicine this comprehensive guide is highly illustrated with clinical photographs and diagrams to enhance learning Previous edition 9781841844497 published in 2004 Key points Fully revised second edition providing latest advances in ART Complete section dedicated to third party reproduction Highly experienced internationally recognised editor and author team Previous edition 9781841844497 published in 2004 **The Endometrium** Stanley R. Glasser, John D. Aplin, Linda C. Giudice, Siamak Tabibzadeh, 2002-05-16 The Endometrium is devoted to a comprehensive multi disciplinary account of the uterine endometrium This book is the first to define the regulatory biological interrelationships between epithelial and stromal cell phenotypes endothelial cells extracellular matrix and immunobiological elements It highlights their relevance to clinical conditions **The Endometrium** John D. Aplin, Asgerally T Fazleabas, Stanley R Glasser, Linda C Giudice, 2008-04-07 The first edition of The Endometrium was a landmark publishing event in reproductive biology and medicine Many important developments have occurred in the field and this new edition has been substantially updated and expanded to include new topics with an improved format With the addition of several new authors and topics the Second Edition of *ART and the Human Blastocyst* David K. Gardner, Michelle Lane, 2012-12-06 The field of human artificial reproductive technology ART is continually advancing and has witnessed significant changes since the inception of Louise Brown in 1978 Though Louise Brown herself was conceived after the transfer of a blastocyst there remain significant confusion and debate regarding the stage at which the human embryo conceived in the laboratory should be replaced in the mother Developments in culture media formulations leading to the introduction of sequential media have brought the role of the blastocyst in human ART back into the spotlight It was due to this resurgence of interest in the niche of extended culture in human infertility treatment that the symposium on ART and the Human Blastocyst was held at this meeting within this

volume bring to the forefront The proceedings the main issues raised with the transfer of embryos at the blastocyst stage It is evident from the chapters that follow that ART needs to be perceived as a continuum of procedures each one dependent on the preceding one and all equally as important as each other That is to say the development of a competent embryo is ultimately dependent on the quality of the gametes from which it was derived With regard to the oocyte this then places the emphasis on the physician to use a stimulation protocol that both produces quality oocytes and does not impair endometrial function Maintenance of gamete and embryo quality is the laboratory's role

Reproductive and Perinatal Epidemiology Statistics Germaine M. Buck Louis Director and Senior Investigator of the Division of Epidemiology, and Prevention Research (DESPR) Eunice Kennedy Shriver National Institute of Child Health & Human Development (NICHD) National Institutes of Health (NIH), Biostatistics Robert W. Platt Associate Professor Departments of Pediatrics and of Epidemiology, and Occupational Health McGill University, 2011-03-23 Population growth and global health disparities for many reproductive and perinatal outcomes are but a few of the pressing issues facing public health today Despite growing interest in the field formal training in reproductive and perinatal epidemiology remains limited with few available textbooks aimed at providing an overview of the field In response to this need faculty from the Eunice Kennedy Shriver National Institute of Child Health Human Development NICHD and CIHR's Institute of Human Development Child and Youth Health IHDCYH developed an intensive competitive Summer Institute in Reproductive and Perinatal Epidemiology The curriculum of this Summer Institute has been developed into a textbook to provide students and researchers with a working knowledge of the substantive and methodologic issues underlying reproductive and perinatal epidemiology Reproductive and Perinatal Epidemiology offers a core curriculum that addresses the epidemiology of major reproductive and perinatal outcomes From human fecundity to birth and neonatal outcomes the subject is approached from

as international a perspective as possible and the unique methodologic issues underlying each outcome are discussed. Developed by leading researchers in collaboration with their students in response to their needs and concerns this is the definitive textbook on the subject.

Therapeutic Outcome of Endocrine Disorders Brian Stabler, Barry B. Berku, 2000 Changes in the allocation of healthcare resources have raised issues related to the efficacy and outcomes of medical therapy and how such factors may be measured. The questions associated with the quality of life and functional capability of patients with chronic health conditions have been of special interest. Endocrine disorders have the potential for disrupting the general health and well being of affected individuals and their families; thus they warrant serious attention. This symposium was convened in November 1997 at Palm Beach Gardens, Florida, to bring together medical, behavioral, and social scientists. The meeting fostered the presentation and discussion of the most current clinical research on the effects of various therapies on a wide range of endocrine disorders, from diabetes to adrenal insufficiency and growth hormone deficiency. The participants all noted national and international experts in their fields focused their attention on both the biomedical value and effectiveness of treatment as well as on the impact such treatments have on psychological states such as mood and cognition. Many presentations specifically emphasized the quality of life (QOL) indicators that now regularly appear in many research protocols and reports. The pioneering work of two clinical researchers was a major highlight of the meeting, and an Award of Recognition was presented to Robert Blizzard, MD, and John Money, PhD, for their innovative and insightful work in pediatric endocrinology and psychosexual development.
