Embryogenesis In Angiosperms A Developmental And Experimental Study:

Embryogenesis in Angiosperms Valayamghat Raghavan, 1986-03-31 For the first time in synoptic form this book presents a clear account of the most recent knowledge of embryogenesis in flowering plants A multidisciplinary approach is adopted bringing together the foundations of tissue culture biochemistry and cell and molecular biology which have supported the rapid progress of research in angiosperm development In the first part of the book the author draws a broad picture of the processes involved in embryogenesis A brief introduction to procedures is followed by chapters on developmental cellular biochemical and experimental aspects of embryogenesis and on somatic and pollen embryogenesis Later sections on the regulation of gene expression and mechanisms of programming developmental information precede a treatment of some practical applications resulting from the study of embryos Two techniques discussed which are aimed towards the goal of enhancing crop productivity in a dynamic and expanding field are embryo rescue from inviable crosses and preservation of germ plasm

Kaloo,J.B. Chowdhury,2012-12-06 Wild taxa are invaluable sources of resistance to diseases insects pests nematodes temperature extremes salinity and alkalinity stresses and also of nutritional quality adaptation genetic diversity and new species Utilization of wild relatives of a crop depends largely upon its crossability relations with cultivated varieties Several wild species are not crossable with the commercial cultivars due to various isolation barriers Furthermore in a few cases hybridization is possible only in one direction and reciprocal crosses are not successful thus depriving the utilization of desired cytoplasm of many species However techniques have been developed to overcome many barriers and hybrid plants are produced New crop species have been developed by overcoming the F₁ sterility and producing amphidiploids and such crops are commercially being grown in the field The segregation pattern of F₁ hybrids produced by distant hybridization in segregating generations are different from the intervarietal hybrids In former cases generally unidirectional segregation takes place in early generations and accordingly selection procedures are adopted In most of the cases backcross or modified backcross methods have been followed to utilize wild species and thus numerous types of resistance and other economical attributes have been transferred in the recurrent parents Protoplast fusion has been amply demonstrated in a number of cases where sexual hybridization was not possible and as a result hybrids have been produced Cells in Space Jean D. Sibonga,1989 Discussions and presentations addressed three aspects of cell research in space the suitability of the cell as a subject in microgravity experiments the requirements for generic flight hardware to support cell research and the

potential for collaboration between academia industry and government to develop these studies in space Synopses are given for the presentations and follow on discussions at the conference and papers are presented from which the presentations were based An Executive Summary outlines the recommendations and conclusions generated at the conference

Embryology of Flowering Plants: Terminology and Concepts, Vol. 3 T B Batygina, 2019-04-23 Plant embryology dealing with the regularities of initiation and the first stages of development of an organism is now flourishing because of the overall progress being made in natural sciences Such discoveries of the 20th century as production of plants from a single somatic cell experimental haploidy and parasexual hybridization were of general biological significance The combined efforts of embryologists geneticists and molecular biologists yielded the discovery of specific genes that control meiosis egg cell development and early stages of embryogenesis The tendency to synthesize data of embryology and genetics has become increasingly noticeable It is connected with the fact that the majority of problems connected with morphogenesis such as differentiation specialization the evaluation of features and the definition of the notions gene and feature and genotype and phenotype concern embryology and genetics embryogenetics in one way or another Evolutionary embryology has given rise

to a new approach to the study of problems of adaptation in plants In connection with the problem of preserving biological diversity under conditions of ecological stress special attention is paid to ecological embryology revealing the critical periods in early ontogenesis and plasticity and tolerance of reproductive systems at the level of species and population The study of variability of morphogenesis and phenotype in population life cycle variations and the diversity of reproductive systems is the most important point in the population embryology of plants Comparative Embryology of Angiosperms Brij Mohan Johri,1992
