Reproduction in Mammals: Volume 2, Embryonic and Fetal Development C. R. Austin, R. V. Short, 1982 *Reproduction in Mammals: Volume 4, Reproductive Fitness* Colin Russell Austin, Roger Valentine Short, 1985-03-21 In this book we are responding to numerous requests for a more recent and rather more detailed treatment of the subject The first edition was accorded an excellent reception but the Books 1 to 5 were written twelve years ago and inevitably there have been advances on many fronts since then **Mammalian Reproductive Biology** F. H. Bronson, 1989 A unique interdisciplinary overview of the way mammals reproduce this volume synthesizes research done by laboratory physiologists behaviorists population ecologists and animal breeders F H Bronson has drawn together the disparate literature in these areas to provide students and researchers with a comprehensive and biologically integrated approach to the study of mammalian reproduction Each chapter presents a wealth of issues and questions summarizing the current consensus on interpretations as well as viable alternatives under debate The book is principally concerned with how environmental factors regulate reproduction Bronson proposes that a mammal's reproductive performance routinely reflects simultaneous regulation by several environmental factors that interact in fascinatingly complex ways Environment is defined broadly and the chapters give equal weight to ecological and physiological factors when considering how variables such as food availability ambient temperature photoperiod and social cues interact to regulate a mammal's reproduction Particular attention is given to seasonal breeding and a taxonomically arranged chapter underscores the importance of comparative and evolutionary biology to an understanding of mammalian reproduction Mammalian Reproductive Biology is a powerful argument for the value and importance of interdisciplinary approaches to research Its almost 1 500 references constitute the most comprehensive bibliography to date on this topic Bronson also gives detailed consideration to promising areas for future research Well organized carefully planned and clearly written this book will become standard reading for scientists concerned with any aspect of mammalian biology **Marshall's Physiology of Reproduction** G.E. Lamming, 2013-04-17 The most comprehensive review available today Marshall's Physiology of Reproduction is the classic reference source for teachers and researchers of animal reproduction Internationally recognised leaders in their respective fields provide an analytical synopsis of the area review current research and outline their philosophical approach to the subject Volume 3 of the fourth edition reviews the processes of pregnancy and lactation in mammals incorporating marsupials non primate eutherians and primates including man Book one covers pregnancy from ovulation to pre parturition book two reviews fetal physiology parturition and lactation The extensive coverage of the physiology of human reproduction and lactation makes this volume a particularly important reference source for researchers in human fertility control while the review of large animal reproduction is relevant to veterinary and para veterinary workers *Reproduction in Mammals: Volume 5, Manipulating Reproduction* Colin Russell Austin, 1986-12-11 In this our second edition of *Reproduction in Mammals* we are responding to numerous

requests for a more up to date and rather more detailed treatment of the subject The first edition was accorded an excellent reception but Books 1 to 5 were written some 14 years ago and inevitably there have been many advances on many fronts since then As before the manner of presentation is intended to make the subject matter interesting to read and readily comprehensible to undergraduates in the biological sciences and yet with sufficient depth to provide a valued source of information to graduates engaged in both teaching and research Our authors have been selected from among the best known in their respective fields Book 5 is concerned with the many ways in which we can now manipulate reproductive processes in animals and humans thanks to our new understanding of hormone action and improved control over early developmental events We have at our disposal a whole array of synthetic hormone agonists antagonists and antibodies that can be used at will to stimulate or inhibit fertility in animals and humans alike so that productivity in livestock can be promoted according to plan and child bearing becomes more a matter of choice than chance We can compensate for infertility by in vitro fertilization and embryo transfer and overcome inherent deficiencies by techniques involving embryo manipulation Existing barriers to the dissemination and application of this new found knowledge are discussed in some detail since it is becoming increasingly clear that improvements in the quality of life for people in many developing countries will be long delayed unless they can meet essential needs and call a halt to runaway population growth

Endocrinology of Embryo—Endometrium Interactions Stanley R. Glasser,Joy Mulholland,Alexandre Psychoyos,2012-12-06 Early embryonic loss is a continuing social and economic global problem In human populations the estimates of interruptions early in pregnancy range from 35 60% In animal husbandry swine ruminants fully 30% of pregnancies fail to survive early events of gestation The futility associated with this persistent high risk is even more unsettling because of advances made in assisted reproductive technology which although this very selective methodology has added to our knowledge of embryo endometrial interactions has resulted in a birth rate of only 14% These studies have instigated comparisons of the live relative contributions of the embryo and the uterus to the outcome of pregnancy These analyses have shown that we have learned significantly less about the role of the uterus in deciding the outcome of either natural or assisted pregnancies In 1979 a quotation by George Corner was used to set the tone of a meeting that was devoted to discussion of the cellular and molecular aspects of implantation In spite of the proliferation in research activity which occurred in the following 15 years our real understanding of the embryo transfer process has fallen short of our expectations We use the Corner quotation once again to preface this symposium so that we may recall that the fundamental nature of the process which regulates embryo endometrial interactions still escapes us *Child Health and Human Development* Tom James Truss,1981 *Assisted Reproductive Technologies in Animals Volume 2* Juan Carlos Gardón,Katy Satué Ambrojo,2025-06-08 This Volume 2 of a two volume topical collection highlights reproductive biotechnologies applied to males and females of different animal species Organized in two parts you will find a detailed review of the latest developments in reproduction management for equines cattle swine and birds The authors discuss the application of ultrasonography equine cloning animal germplasm banks the captive breeding of threatened wild birds as well as nanotechnologies and artificial intelligence Vivid illustrations

Infanticide Glenn Hausfater, Sarah Blaffer Hrdy, 2017-07-12 Recent field studies of a variety of mammalian species reveal a surprisingly high frequency of infanticide the killing of unweaned or otherwise maternally dependent offspring Similarly studies of birds fish amphibians and invertebrates demonstrate egg and larval mortality in these species a phenomenon directly analogous to infanticide in mammals In this collection Hausfater and Hrdy draw together work on animal and human infanticide and place these studies in a broad evolutionary and comparative perspective Infanticide presents the theoretical background and taxonomic distribution of infanticide infanticide in nonhuman primates infanticide in rodents and infanticide in humans It examines closely sex allocation and sex ratio theory surveys the phylogeny of mammalian interbirth intervals and reviews data on sources of egg and larval mortality in a variety of invertebrate and lower vertebrate species Dealing with infanticide in nonhuman primates two chapters critically examine data on infanticide in langurs and its broader theoretical implications By reviewing sources of infant mortality in populations of small mammals and new laboratory analyses of the causes and consequences of infanticide this work explores such issues as the ontogeny of infanticide proximate cues of infants and females which elicit infanticidal behavior in males the genetical basis of infanticide and the hormonal determinants Hausfater and Sarah Blaffer Hrdy through their selection of materials for this book evaluate the frequency causes and function of infanticide Historical ethnographic and recent data on infanticide are surveyed Infanticide summarizes current research on the evolutionary origins and proximate causation of infanticide in animals and man As such it will be indispensable reading for anthropologists and behavioral biologists as well as ecologists psychologists demographers and epidemiologists
