Transcending the Speed of Light

Marc Seifer,2008-08-13 A study of the new scientific understanding of consciousness and the mind as a fifth dimension of reality Introduces the existence of a fifth dimension one of mind an inner or hyperspace where time is transcended Shows how the barrier of the speed of light is actually a gateway demarking the fifth dimension Since the introduction of Descartes dualism in the seventeenth century the mind and the physical world have been viewed as disconnected entities Yet qualities of mind such as awareness purposeful action organization design and even decision making are present within the structure of matter and within the dimensions of space and time The space time continuum of scientists generally ignores the realm of the mind though phenomena such as imaginary numbers used by Einstein to combine space with time are concepts that only exist in the mind Marc Seifer contends that the inadequacy of four dimensional models to account for our experience of mental phenomena points to the consciousness of the mind as a higher organizing principle a fifth dimension where thoughts are as real and quantifiable as our familiar physical world He shows that because thought enables us to move backward and forward through time reflecting on the past and making plans for the future this fifth dimension of mind breaks the laws of relativity thereby transcending the speed of light His extensive study of this fifth dimension ranges from relativity and ether theory to precognition telepathy and synchronicity all from the perspective of the conscious universe

Particle or Wave Charis Anastopoulos, 2020-12-08 Particle or Wave is the first popular level book to explain the origins and development of modern physical concepts about matter and the controversies surrounding them The dichotomy between particle and wave reflects a dispute whether the universe's most elementary building blocks are discrete or continuous in nature originating in antiquity when philosophers first speculated about the makeup of the physical world Charis Anastopoulos examines two of the earliest known theories about matter the atomic theory which attributed all physical phenomena to atoms and their motion in the void and the theory of the elements which described matter as consisting of the substances earth air fire and water He then leads readers up through the ages to the very frontiers of modern physics to reveal how these seemingly contradictory ideas still lie at the heart of today's continuing debates Anastopoulos explores the revolutionary contributions of thinkers like Nicolas Copernicus Isaac Newton and Albert Einstein He shows how Einstein's ideas about relativity unify opposing concepts by identifying matter with energy and how quantum mechanics goes even further by postulating the coexistence of the particle and the wave descriptions Anastopoulos surveys the latest advances in physics on the fundamental structure of matter including the theories of quantum fields and elementary particles and new cutting edge ideas about the unification of all forces This book reveals how the apparent contradictions of particle and wave reflect very different ways of understanding the physical world and how they are pushing modern science to the threshold of new discoveries
