Payne-James, 2016-08-16 Forensic medicine is a broad and evolving field with areas of rapid progress embracing both clinical and pathological aspects of practice in which there may be considerable overlap. This is the second volume in a series that provides a unique in depth and critical update on selected topics of direct relevance to those practising in the field of clinical forensic medicine and related areas including lawyers, police, medical practitioners, forensic scientists and students. The chapters endeavour to maintain a relevance to an international multi professional audience and include chapters on DNA decontamination, The toxicity of novel psychoactive substances, The relevance of gastric contents in the timing of death, The effects of controlled energy devices, The main risk factors for driving impairment, The risk factors for harm to health of detainees in short term custody, Autoerotic deaths, Child maltreatment and neglect, and The investigation of potential non accidental head injury in children. Also included are chapters on excited delirium syndrome, automatism and personality disorders. Two topics not generally covered in standard clinical forensic medical textbooks include a forensic anthropological approach to body recovery in potential crimes against humanity and risk management and security issues for the forensic practitioner investigating potential crimes against humanity in a foreign country.
