 health hazard Its symptoms may mimic those of a number of other unrelated infections such as influenza meningitis hepatitis  
 dengue or viral haemorrhagic fevers It is important to distinguish leptospirosis from these diseases For this reason new  
 diagnostic methods have been developed in recent years In humid tropical and subtropical areas where most developing  
 countries are located leptospirosis poses a greater health problem than in areas with a temperate climate Because  
 leptospirosis is easily overlooked and consequently underreported in many parts of the world it is necessary to increase  
 awareness and knowledge of the disease as a public health threat The aim of these guidelines is to assist in this process The  
 target groups to which these guidelines are directed consist of health workers clinicians laboratory technicians

microbiologists public health workers veterinarians and biologists with an interest in zoonoses having no specialized knowledge of leptospirosis but who wish to be generally informed about the microorganism concerned and the disease that it may cause This is not a handbook and avoids technical details but the interested reader can find further information in the annexes and the general bibliography These guidelines are concerned essentially with human leptospirosis International Journal of STD & AIDS ,1990 **Colorado Laboratory Bulletin** ,1990 **Henry's Clinical Diagnosis and Management by Laboratory Methods E-Book** Richard A.
