Elliptically Contoured Models in Statistics Arjun K Gupta,Tamas Varga,1993-01-31 **Elliptically Contoured Models in Statistics and Portfolio Theory** Arjun K. Gupta,Tamas Varga,Taras Bodnar,2013-09-07 Elliptically Contoured Models in Statistics and Portfolio Theory fully revises the first detailed introduction to the theory of matrix variate elliptically contoured distributions There are two additional chapters and all the original chapters of this classic text have been updated Resources in this book will be valuable for researchers practitioners and graduate students in statistics and related fields of finance and engineering Those interested in multivariate statistical analysis and its application to portfolio theory will find this text immediately useful In multivariate statistical analysis elliptical distributions have recently provided an alternative to the normal model Elliptical distributions have also increased their popularity in finance because of the ability to model heavy tails usually observed in real data Most of the work however is spread out in journals throughout the world and is not easily accessible to the investigators A noteworthy function of this book is the collection of the most important results on the theory of matrix variate elliptically contoured distributions that were previously only available in the journal based literature The content is organized in a unified manner that can serve as a valuable introduction to the subject **Elliptically Contoured Models in Statistics** Arjun K. Gupta,Tamas Varga,2012-12-06 In multivariate statistical analysis elliptical distributions have recently provided an alternative to the normal model Most of the work however is spread out in journals throughout the world and is not easily accessible to the investigators Fang Kotz and Ng presented a systematic study of multivariate elliptical distributions however they did not discuss the matrix variate case Recently Fang and Zhang have summarized the results of generalized multivariate analysis which include vector as well as the matrix variate distributions On the other hand Fang and Anderson collected research papers on matrix variate elliptical distributions many of them published for the first time in English They published very rich material on the topic but the results are given in paper form which does not provide a unified treatment of the theory Therefore it seemed appropriate to collect the most important results on the theory of matrix variate elliptically contoured distributions available in the literature and organize them in a unified manner that can serve as an introduction to the subject The book will be useful for researchers teachers and graduate students in statistics and related fields whose interests involve multivariate statistical analysis Parts of this book were presented by Arjun K Gupta as a one semester course at Bowling Green State University Some new results have also been included which generalize the results in Fang and Zhang Knowledge of matrix algebra and statistics at the level of Anderson is assumed However Chapter 1 summarizes some results of matrix algebra **Multidimensional Statistical Analysis and Theory of Random Matrices** A. Brendan Murphy,Adrian E. Raftery,2019-07-25 Cluster analysis finds groups in data automatically Most methods have been heuristic and leave open such central questions as how many clusters are there Which method should I use How should I handle outliers Classification assigns new observations to groups given previously classified observations and also has open questions about parameter tuning robustness and uncertainty assessment This book frames cluster analysis and classification in terms of statistical models thus yielding principled estimation testing and prediction methods and sound answers to the central questions It builds the basic ideas in an accessible but rigorous way with extensive data examples and R code describes modern approaches to high dimensional data and networks and explains such recent advances as Bayesian regularization non Gaussian model based clustering cluster merging variable selection semi supervised and robust classification clustering of functional data text and images and co clustering Written for advanced undergraduates in data science as well as researchers and practitioners it assumes basic knowledge of multivariate calculus linear algebra probability and statistics **Statistical Analysis of Graph Structures in Random Variable Networks** V.
