Computational Intelligence - Volume I Hisao Ishibuchi,2015-12-30 Computational intelligence is a component of Encyclopedia of Technology Information and Systems Management Resources in the global Encyclopedia of Life Support Systems EOLSS which is an integrated compendium of twenty one Encyclopedias Computational intelligence is a rapidly growing research field including a wide variety of problem solving techniques inspired by nature Traditionally computational intelligence consists of three major research areas Neural Networks Fuzzy Systems and Evolutionary Computation Neural networks are mathematical models inspired by brains Neural networks have massively parallel network structures with many neurons and weighted connections Whereas each neuron has a simple input output relation a neural network with many neurons can realize a highly non linear complicated mapping Connection weights between neurons can be adjusted in an automated manner by a learning algorithm to realize a non linear mapping required in a particular application task Fuzzy systems are mathematical models proposed to handle inherent fuzziness in natural language For example it is very difficult to mathematically define the meaning of cold in everyday conversations such as It is cold today and Can I have cold water The meaning of cold may be different in a different situation Even in the same situation a different person may have a different meaning Fuzzy systems offer a mathematical mechanism to handle inherent fuzziness in natural language As a result fuzzy systems have been successfully applied to real world problems by extracting linguistic knowledge from human experts in the form of fuzzy IF THEN rules Evolutionary computation includes various population based search algorithms inspired by evolution in nature Those algorithms usually have the following three mechanisms fitness evaluation to measure the quality of each solution selection to choose good solutions from the current population and variation operators to generate offspring from parents Evolutionary computation has high applicability to a wide range of optimization problems with different characteristics since it does not need any explicit mathematical formulations of objective functions For example simulation

based fitness evaluation is often used in evolutionary design Subjective fitness evaluation by a human user is also often used in evolutionary art and music These volumes are aimed at the following five major target audiences University and College students Educators Professional practitioners Research personnel and Policy analysts managers and decision makers

Algorithms, Complexity Analysis and VLSI Architectures for MPEG-4 Motion Estimation Peter M. Kuhn,2013-06-29 MPEG 4 is the multimedia standard for combining interactivity natural and synthetic digital video audio and computer graphics Typical applications are internet video conferencing mobile videophones multimedia cooperative work teleteaching and games With MPEG 4 the next step from block based video ISO IEC MPEG 1 MPEG 2 CCITT H 261 ITU T H 263 to arbitrarily shaped visual objects is taken This significant step demands a new methodology for system analysis and design to meet the considerably higher flexibility of MPEG 4 Motion estimation is a central part of MPEG 1 2 4 and H 261 H 263 video compression standards and has attracted much attention in research and industry for the following reasons it is computationally the most demanding algorithm of a video encoder about 60 80% of the total computation time it has a high impact on the visual quality of a video encoder and it is not standardized thus being open to competition Algorithms Complexity Analysis and VLSI Architectures for MPEG 4 Motion Estimation covers in detail every single step in the design of a MPEG 1 2 4 or H 261 H 263 compliant video encoder Fast motion estimation algorithms Complexity analysis tools Detailed complexity analysis of a software implementation of MPEG 4 video Complexity and visual quality analysis of fast motion estimation algorithms within MPEG 4 Design space on motion estimation VLSI architectures Detailed VLSI design examples of 1 a high throughput and 2 a low power MPEG 4 motion estimator Algorithms Complexity Analysis and VLSI Architectures for MPEG 4 Motion Estimation is an important introduction to numerous algorithmic architectural and system design aspects of the multimedia standard MPEG 4 As such all researchers students and practitioners working in image processing video coding or system and VLSI design will find this book of interest *Digital Controller Implementation and Fragility* Robert Istepanian,James F. Whidborne,2012-12-06 In the usual process of control system design the assumption is made that the controller is implemented exactly This assumption is usually reasonable since clearly the plant uncertainty is the most significant source of uncertainty in the control system while controllers are implemented with high precision hardware However inevitably there will be some amount of uncertainty in the controller a fact that is largely ignored in existing modern advanced robust control techniques If the controller is implemented by analogue means there are some tolerances in the analogue components More commonly the controller will be implemented digitally and consequently there will be uncertainty involved with the quantization in the analogue digital conversion and rounding in the parameter representation

and in the numerical computations A failure to account for these uncertainties in the controller may result in a controller that is fragile A controller is fragile in the sense that very small perturbations in the coefficients of the designed controller destabilize the closed loop control system This book collects a number of articles which consider the problems of finite precision computing in digital controllers and filters Written by leading researchers topics that the book covers include analysis of fragility and finite precision effects design of optimal controller realizations design of non fragile robust controllers design of low complexity digital controllers analysis of quantization effects in fuzzy controllers   <u>Languages and Compilers for Parallel Computing</u> Charith Mendis,Lawrence Rauchwerger,2023-05-09 This book constitutes the thoroughly refereed post conference proceedings of the 35th International Workshop on Languages and Compilers for Parallel Computing LCPC 2022 held in Chicago IL USA in October 2022 The 9 revised full papers were carefully reviewed and selected from 12 submissions The conference covers all aspects of languages compiler techniques run time environments and compiler related performance evaluation for parallel and high performance computing The scope of the workshop encompasses foundational results as well as practical experience reports and bold new ideas for future systems   *Advances in Real-Time Systems* Samarjit Chakraborty,Jörg Eberspächer,2012-02-09 This volume contains the lectures given in honor to Georg F rber as tribute to his contributions in the area of real time and embedded systems The chapters of many leading scientists cover a wide range of aspects like robot or automotive vision systems or medical aspects   <u>Evolutionary Design of Intelligent Systems in Modeling, Simulation and Control</u> Oscar Castillo,Witold Pedrycz,2009-10-13 We describe in this book new methods for evolutionary design of intelligent s tems using soft computing and their applications in modeling simulation and c trol Soft Computing SC consists of several intelligent computing paradigms including fuzzy logic neural networks and evolutionary algorithms which can be used to produce powerful hybrid intelligent systems The book is organized in four main parts which contain a group of papers around a similar subject The first part consists of papers with the main theme of evolutionary design of fuzzy systems in intelligent control which consists of papers that propose new methods for designing and optimizing intelligent controllers for different applications The second part c tains papers with the main theme of evolutionary design of intelligent systems for pattern recognition applications which are basically papers using evolutionary al rithms for optimizing modular neural networks with fuzzy systems for response tegration for achieving pattern recognition in different applications The third part contains papers with the themes of models for learning and social simulation which are papers that apply intelligent systems to the problems of designing learning jects and social agents The fourth part contains papers that deal with intelligent s tems in robotics applications and hardware implementations In the part of Intelligent Control there are 5 papers that describe different c tributions on evolutionary optimization of fuzzy systems in intelligent control The first paper by Ricardo Martinez Marroquin et al   *Reconfigurable Computing: Architectures, Tools and Applications* Pedro C. Diniz,2007-03-19 This book constitutes the refereed proceedings of the Third

International Workshop on Applied Reconfigurable Computing ARC 2007 held in Mangaratiba Brazil in March 2007 The 27 full papers and 10 short papers presented together with a late comer contribution from ARC 2006 are organized in topical sections on architectures mapping techniques and tools arithmetic and applications **Advances in Microelectronics: Reviews, Vol. 2** Sergey Yurish,2019-02-07 The 2nd volume of Advances in Microelectronics Reviews Book Series is written by 57 contributors from academy and industry from 11 countries Bulgaria Hungary Iran Japan Malaysia Romania Russia Slovak Republic Spain Ukraine and USA The book contains 13 chapters from different areas of microelectronics MEMS materials characterization and various microelectronic devices With unique combination of information in each volume the Book Series will be of value for scientists and engineers in industry and at universities Each of chapter is ending by well selected list of references with books journals conference proceedings and web sites This book ensures that readers will stay at the cutting edge of the field and get the right and effective start point and road map for the further researches and developments *Fault-Tolerant Real-Time Systems* Stefan Poledna,2007-11-23 Real time computer systems are very often subject to dependability requirements because of their application areas Fly by wire airplane control systems control of power plants industrial process control systems and others are required to continue their function despite faults Fault tolerance and real time requirements thus constitute a kind of natural combination in process control applications Systematic fault tolerance is based on redundancy which is used to mask failures of individual components The problem of replica determinism is thereby to ensure that replicated components show consistent behavior in the absence of faults It might seem trivial that given an identical sequence of inputs replicated computer systems will produce consistent outputs Unfortunately this is not the case The problem of replica non determinism and the presentation of its possible solutions is the subject of Fault Tolerant Real Time Systems The Problem of Replica Determinism The field of automotive electronics is an important application area of fault tolerant real time systems Systems like anti lock braking engine control active suspension or vehicle dynamics control have demanding real time and fault tolerance requirements These requirements have to be met even in the presence of very limited resources since cost is extremely important Because of its interesting properties Fault Tolerant Real Time Systems gives an introduction to the application area of automotive electronics The requirements of automotive electronics are a topic of discussion in the remainder of this work and are used as a benchmark to evaluate solutions to the problem of replica determinism
