We live on a dynamic Earth shaped by both natural processes and the impacts of humans on their environment. It is in our collective interest to observe and understand our planet and to predict future behavior to the extent possible in order to effectively manage resources, successfully respond to threats from natural and human-induced environmental change, and capitalize on the opportunities social economic security and more that such knowledge can bring. By continuously monitoring and exploring Earth, developing a deep understanding of its evolving behavior and characterizing the processes that shape and reshape the environment in which we live, we not only advance knowledge and basic discovery about our planet but we further develop the foundation upon which benefits to society are built. *Thriving on Our Changing Planet* presents prioritized science applications and observations along with related strategic and programmatic guidance to support the U.S. civil space Earth observation program over the coming decade.
