**Neurobiology and the Development of Human Morality: Evolution, Culture, and Wisdom (Norton Series on Interpersonal Neurobiology)** Darcia Narvaez, 2014-10-20 Winner of the William James Book Award Winner of the inaugural Expanded Reason Award A wide ranging exploration of the role of childhood experiences in adult morality Moral development has traditionally been considered a matter of reasoning of learning and acting in accordance with abstract rules

On this model largely taken for granted in modern societies acts of selfishness aggression and ecological mindlessness are failures of will moral problems that can be solved by acting in accordance with a higher rationality But both ancient philosophy and recent scientific scholarship emphasize implicit systems such as action schemas and perceptual filters that guide behavior and shape human development In this integrative book Darcia Narvaez argues that morality goes all the way down into our neurobiological and emotional development and that a person's moral architecture is largely established early on in life Moral rationality and virtue emerge bottom up from lived experience so it matters what that experience is Bringing together deep anthropological history ethical philosophy and contemporary neurobiological science she demonstrates where modern industrialized societies have fallen away from the cultural practices that made us human in the first place

**Neurobiology and the Development of Human Morality** advances the field of developmental moral psychology in three key ways First it provides an evolutionary framework for early childhood experience grounded in developmental systems theory encompassing not only genes but a wide array of environmental and epigenetic factors Second it proposes a neurobiological basis for the development of moral sensibilities and cognition describing ethical functioning at multiple levels of complexity and context before turning to a theory of the emergence of wisdom Finally it embraces the sociocultural orientations of our ancestors and cousins in small band hunter gatherer societies the norm for 99% of human history for a re envisioning of moral life from the way we value and organize child raising to how we might frame a response to human made global ecological collapse Integrating the latest scholarship in clinical sciences and positive psychology Narvaez proposes a developmentally informed ecological and ethical sensibility as a way to self author and revise the ways we think about parenting and sociality The techniques she describes point towards an alternative vision of moral development and flourishing one that synthesizes traditional models of executive top down wisdom with primal wisdom built by multiple systems of biological and cultural influence from the ground up

book Michael Marmot president of the World Medical Association reveals social injustice to be the greatest threat to global health In Baltimore s inner city neighborhood of Upton Druid Heights a man s life expectancy is sixty three not far away in the Greater Roland Park Poplar neighborhood life expectancy is eighty three The same twenty year avoidable disparity exists in the Calton and Lenzie neighborhoods of Glasgow and in other cities around the world In Sierra Leone one in 21 fifteen year old women will die in her fertile years of a maternal related cause in Italy the figure is one in 17 100 but in the United States which spends more on healthcare than any other country in the world it is one in 1 800 and now with the new administration chipping away at Obamacare the statistics stand to grow even more devastating Why Dramatic differences in health are not a simple matter of rich and poor poverty alone doesn t drive ill health but inequality does Indeed suicide heart disease lung disease obesity and diabetes for example are all linked to social disadvantage In every country people at relative social disadvantage suffer health disadvantage and shorter lives Within countries the higher the social status of individuals the better their health These health inequalities defy the usual explanations Conventional approaches to improving health have emphasized access to technical solutions and changes in the behavior of individuals but these methods only go so far What really makes a difference is creating the conditions for people to have control over their lives to have the power to live as they want Empowerment is the key to reducing health inequality and thereby improving the health of everyone Marmot emphasizes that the rate of illness of a society as a whole determines how well it functions the greater the health inequity the greater the dysfunction Marmot underscores that we have the tools and resources materially to improve levels of health for individuals and societies around the world and that to not do so would be a form of injustice Citing powerful examples and startling statistics young men in the U S have less chance of surviving to sixty than young men in forty nine other countries The Health Gap presents compelling evidence for a radical change in the way we think about health and indeed society and inspires us to address the societal imbalances in power money and resources that work against health equity **General**
