## **Floodproofing Nonresidential Structures:**

*Floodproofing Non-Residential Buildings* Federal Emergency Management Agency, 2013 Flooding is the most common natural hazard in the United States and results in more fatalities and higher losses on average than any other natural hazard. Since 2001 the average annual flood losses in the United States were more than 10.4 billion and from 1978 to mid 2012 the National Flood Insurance Program NFIP paid more than 41.3 billion in flood insurance claims. Flood hazard mitigation can be achieved in several ways and is often different for buildings that are used for non residential purposes such as business or industry as compared to residential buildings such as homes and apartments. To that end in 1986 the Federal Emergency Management Agency FEMA published FEMA 102 Floodproofing for Non Residential Structures FEMA 1986. The publication provided guidance to local officials, building owners, designers, contractors, and other individuals or organizations interested in the design and implementation of floodproofing retrofits in non residential structures. The guidance in FEMA 102 covers a broad range of floodproofing techniques that can be used in new and existing non residential buildings to reduce or eliminate the potential for damage from flooding. FEMA 102 is currently one of only a few documents in the FEMA Library that provides design professionals and community officials with guidance on floodproofing non residential buildings. However, since its publication in 1986, floodproofing techniques and technology have evolved such that updated guidance on the subject is needed. FEMA P 936 Floodproofing Non Residential Buildings provides current guidance on floodproofing retrofits for non residential buildings. The primary objective of this publication is to provide guidance on floodproofing existing non residential buildings in riverine areas and coastal areas that are not subject to wave action. Floodproofing will be most successful in areas subject to relatively shallow flood depths. The floodproofing concepts in this document may be applicable to Core areas of critical facilities. Buildings subject to frequent low level flooding for a level of protection lower than the base flood elevation BFE New construction. Additionally, a portion of the document describes dry floodproofing specific to new construction. The publication focuses primarily on dry floodproofing but provides an overview of other retrofit methods that can be used in conjunction with or independent of dry floodproofing including Wet floodproofing, Floodwalls, Levees, Protection of utilities, Emergency floodproofing measures. The publication is intended to assist local government officials, engineers, architects, and property owners involved in the planning and implementation of floodproofing retrofits. Retrofits may be proposed voluntarily by the owner to reduce damage or may be necessary to meet building codes or floodplain management regulations. The following topics are not covered in detail: Residential construction including large apartment and condominium complexes with multiple buildings, retirement homes, and nursing homes. Operational considerations of floodproofing critical facilities. Elevation, Relocation, Wave loads, and Coastal A Zones. Building location, size, construction function, and historic preservation factors dictate which floodproofing measure or measures will provide the most protection. The more complex the building, the more complex it is to protect. FEMA P 936

Geren,2016-02-22 No other resource not even the building code presents the exact code information you need when you need it at design stage The International Building Code IBC is a model building code developed by the International Code Council ICC The IBC and its complementary codes provide design and construction professionals with a complete set of comprehensive coordinated building safety and fire prevention regulations in order to safeguard the public health and general welfare of the occupants of new and existing buildings and structures Adopted throughout most of the

United States and its territories it is referenced by federal agencies such as the General Services Administration National Park Service Department of State U S Forest Service and the Department of Defense For architects and other design and construction professionals it is particularly important that they understand how to apply the IBC and how code officials view buildings so that they integrate code required provisions in the earliest design stages of any project Applying the IBC as well as its companion codes to building design is a process that is uniquely different to that of applying the building code during a planning review Whereas other guide books explain the IBC in sequential order from cover to cover chapter by chapter and section by section Applying the Building Code explains the requirements of the IBC as they would apply during the common phases of design from schematic design through to the preparation of construction documents This effectively highlights applicable requirements of the building code at the appropriate stage of design based on available information The book provides a 28 step process that is organized according to the three phases of architectural design schematic design design development and construction documents Each step explains the application of the IBC as well as other codes and standards referenced by the IBC i e International Fire Code International Energy Conservation Code and ANSI A117.1 based on available project information Illustrations and examples are provided throughout that explain the code fundamentals associated with each step A single example project is used throughout the step by step process to illustrate how each step is applied and builds upon code and project information obtained through previous steps Guidance is also provided on the International Existing Building Code and how the step by step process is applied to projects involving existing buildings The role of the building department and its staff in regard to plan reviews and code enforcement is discussed A detailed code data information template is provided that can help organize code related information for construction documents
