*Flood Problem and Management in South Asia* M. Monirul Qader Mirza,Ajaya Dixit,Ainun Nishat,2013-03-09 Flood Problem and Management in South Asia focuses on both the hazard and the vulnerability aspects of floods This book addresses floods in South Asia from a multidisciplinary approach The characteristics and nature of the flood problem and its management aspects are examined It is suggested that flood control and management focused on structural solutions using embankments and reservoirs are insufficient Effective solutions must go beyond structural measures and require major restructuring of both legal systems and institutions responsible for management For those people living in the vast flood plains of South Asia to be able to overcome social economic and environmental vulnerabilities an adaptive approach to management of flood risks that identifies specific strategies is needed      *Floods* Dennis J. Floods of the Tiber in Ancient Rome Gregory S. Aldrete,2007-03-05 A study of the impact of flooding on the ancient city during the classical period While the remains of its massive aqueducts serve as tangible reminders of Rome s efforts to control its supply of drinking water there are scant physical reminders that other waters sometimes raged out of control In fact floods were simply a part of life in ancient Rome where proximity to the Tiber left a substantial part of the city vulnerable to the river s occasional transgressions Here in the first book length treatment of the impact of floods on an ancient city Gregory S Aldrete draws upon a diverse range of scientific and cultural data to develop a rich and detailed account of flooding in Rome throughout the classical period Aldrete explores in detail the overflowing river s destructive effects drawing from ancient and modern written records and literary accounts analyses of the topography and hydrology of the Tiber drainage basin visible evidence on surviving structures and the known engineering methods devised to limit the reach of rising water He discusses the strategies the Romans employed to alleviate or prevent flooding their social and religious attitudes toward floods and how the threat of inundation influenced the development of the city s physical and economic landscapes Floods of the Tiber in Ancient Rome is that rare thing in scholarship a work that genuinely fills a gap in the scholarly literature Professor Aldrete has brilliantly illuminated an aspect of ancient Rome that was ever present to the

city's inhabitants but almost invisible to modern historians Stanley Burstein history teacher Raises important questions about the effects of flooding of the Tiber on the city of ancient Rome and its inhabitants and explores why Romans did not take more sweeping steps to reduce if not eliminate the dangers of urban flooding There is no comparable book length study of this topic so this work fills a real need It will be of interest not only to students of ancient history but to hydrologists and students of urban studies as well Certainly it will give us classicists much to think about in our assessment of urban life in ancient Rome Harry B Evans Fordham University author of *Aqueduct Hunting in the Seventeenth Century*

*Applied Hydrometeorology* Pukhraj Rakhecha, Vijay P. Singh, 2010-02-17 Water is vital for life Since the dawn of civilization much effort has been made to harness sources of fresh water Recent years have raised global awareness of the need for increasing demand of water worldwide largely because of growing population rising standard of living higher demand for energy and greater appreciation for environmental quality As an example the world population has increased threefold in the past five decades In order to meet the rising water demand water resources are being developed by building large dams reservoirs barrages and weirs across rivers worldwide The guiding principle for water resources development has been to ensure adequate supply of water for agriculture domestic use including fine drinking water waste disposal industries and energy production with due attention to maintain the ecosystem functions This development however depends on a holistic

cooperative and scientific approach The basic inputs in the assessment of water resources for a given region are from hydrological data and the subject of hydrology forms the core in achieving sustainable development of water resources Barring a few exceptions hydrological data for most river basins are sparse and therefore it is difficult to comprehensively assess their water resources The major source of water is rainfall which occurs as a result of condensation of atmospheric moisture governed by the science of meteorology Treatise on Geomorphology ,2013-02-27 The changing focus and approach of geomorphic research suggests that the time is opportune for a summary of the state of discipline The number of peer reviewed papers published in geomorphic journals has grown steadily for more than two decades and more importantly the diversity of authors with respect to geographic location and disciplinary background geography geology ecology civil engineering computer science geographic information science and others has expanded dramatically As more good minds are drawn to geomorphology and the breadth of the peer reviewed literature grows an effective summary of contemporary geomorphic knowledge becomes increasingly difficult The fourteen volumes of this Treatise on Geomorphology will provide an important reference for users from undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic Information on the historical development of diverse topics within geomorphology provides context for ongoing research discussion of research strategies equipment and field methods laboratory experiments and numerical simulations reflect the multiple approaches to understanding Earth's surfaces and summaries of outstanding research questions highlight future challenges and suggest productive new avenues for research Our future ability to adapt to geomorphic changes in the critical zone very much hinges upon how well landform scientists comprehend the dynamics of Earth's diverse surfaces This Treatise on Geomorphology provides a useful synthesis of the state of the discipline as well as highlighting productive research directions that Educators and students researchers will find useful Geomorphology has advanced greatly in the last 10 years to become a very interdisciplinary field Undergraduate students looking for term paper topics to graduate students starting a literature review for their thesis work and professionals seeking a concise summary of a particular topic will find the answers they need in this broad reference work which has been designed and written to accommodate their diverse backgrounds and levels of understanding Editor in Chief Prof J F Shroder of the University of Nebraska at Omaha is past president of the QG G section of the Geological Society of America and present Trustee of the GSA Foundation while being well respected in the geomorphology research community and having won numerous awards in the field A host of noted international geomorphologists have contributed state of the art chapters to the work Readers can be guaranteed that every chapter in this extensive work has been critically reviewed for consistency and accuracy by the World expert Volume Editors and by the Editor in Chief himself No other reference work exists in the area of Geomorphology that offers the breadth and depth of information contained in this 14 volume masterpiece From the foundations and history of geomorphology through to

geomorphological innovations and computer modelling and the past and future states of landform science no stone has been left unturned *The Lower Damodar River, India* Kumkum Bhattacharyya, 2011-03-29 Interweaving the human aspects of river control with analysis of hydro physical data including historical data over the last few centuries this monograph is a comprehensive evaluation of the Damodar's lower reaches While the Damodar River isn't an exceptional tropical river nor does it feature classic examples of river control structures it is unusual and worthy of study due to the fact that nowhere else in the tropical world have riverine sandbars been used as a resource base as well as for permanent settlements Based on their knowledge of river stages the inhabitants have fine tuned their land use to flood events applying a concept of flood zoning to the riverbed Every available space has been utilized rationally and judiciously This rare human environmental study analyzes the remarkable way in which immigrants unfamiliar with the riverine environment have adapted to the altered hydrologic regime of the river In doing so they have demonstrated a sophisticated understanding of the flood regime and the vagaries of an unpromising environment in their land use cropping and settlement patterns Spurred on by restricted social and economic mobility and sometimes political constraints these self settled refugees have learned to adapt to their environment and live with the floods Bhattacharyya's text is particularly timely as anthropogenic processes of this kind have not been adequately studied by geographers
