**The World's Largest Wetlands** Lauchlan H. Fraser, Paul A. Keddy, 2005-06-30 During the past century approximately fifty percent of the world's wetlands have been destroyed largely due to human activities Increased human population has led to shrinkage of wetland areas and data show that as they shrink their important functions decline Reduced wetland area causes more flooding in Spring less available water during drought greater risk of water pollution and less food production and reduced carbon storage Much of the remaining pristine wetland systems are found in the world's largest wetlands and yet these areas have received surprisingly little scientific research or attention This volume presents the views of leading experts on each of the world's largest wetland systems Here this international team of authors share their understanding of the ecological dynamics of large wetlands and their significance and emphasise their need of conservation *The Catfish Connection* Ronaldo Barthem, Michael Goulding, 1997 The Amazon Basin's rivers estuaries and tributaries are home to as many as 1000 species of catfish In this work two scientists offer a natural history of the Amazon giant catfish and its central place as a source of food and income within the ecology and economy of the Amazon Basin While focusing primarily on two species of giant catfish known locally as Dourada and Piramutaba the authors also present illustrated accounts of 13 distinct large fish Their research yields strong statistical data and field observations that illustrate the catfishes extensive migratory

range and presents solid evidence of animal species requiring or using a large part of the basin for their ecological needs

**The Amazon River** Karen Gibson, 2012-09-30 When people think of the great rivers of the world the Amazon River of South America immediately comes to mind Filled with giant snakes and fish that like the taste of blood and flesh the Amazon is like no other place in the world Located near the equator the Amazon River starts as a small stream in the Andes Mountains within a hundred miles of the Pacific Ocean From here it travels along the northern part of the continent Rain and melting snow increase its size So do more than a thousand tributaries The Amazon River's path takes it through the world's largest rain forest a place where many thousands of plants and animals make their home For several months out of the year high rains cause the Amazon River to leave its banks and wash into the Amazon basin for millions of square miles The flooded forests create a unique ecosystem like no other place in the world The Amazon River creates life food and medicines
