Self-organized Criticality and Predictability in Atmospheric Flows Amujuri Mary Selvam, 2017-05-05 This book presents a new concept of General Systems Theory and its application to atmospheric physics It reveals that energy input into the atmospheric eddy continuum whether natural or manmade results in enhancement of fluctuations of all scales manifested immediately in the intensification of high frequency fluctuations such as the Quasi Biennial Oscillation and the El Nino Southern Oscillation cycles Atmospheric flows exhibit self organised criticality i e long range correlations in space and time manifested as fractal geometry to the spatial pattern concomitant with an inverse power law form for fluctuations of meteorological parameters such as temperature pressure etc Traditional meteorological theory cannot satisfactorily explain the observed self similar space time structure of atmospheric flows A recently developed general systems theory for fractal space time fluctuations shows that the larger scale fluctuation can be visualised to emerge from the space time averaging of enclosed small scale fluctuations thereby generating a hierarchy of self similar fluctuations manifested as the observed eddy continuum in power spectral analyses of fractal fluctuations The interconnected network of eddy circulations responds as a unified whole to local perturbations such as global scale response to El Nino events The general systems theory model predicts an inverse power law form incorporating the golden mean for the distribution of space time fluctuation patterns and for the power variance spectra of the fluctuations Since the probability distributions of amplitude and variance are the same atmospheric flows exhibit quantumlike chaos Long range correlations inherent to power law distributions of fluctuations are identified as nonlocal connection or entanglement exhibited by quantum systems such as electrons or photons The predicted distribution

is close to the Gaussian distribution for small scale fluctuations but exhibits a fat long tail for large scale fluctuations
Universal inverse power law for fractal fluctuations rules out unambiguously linear secular trends in climate parameters

Monster Metaphors Peter J. Adams, 2023-05-11 This book explores ways in which common metaphors can play a detrimental role in everyday life how they can grow in outsized importance to dominate their respective terrains and push out alternative perspectives and how forms of resistance might act to contain their dominance The volume begins by unpacking the dynamics of metaphors their power and influence and the ways in which they are bolstered by other rhetorical devices Adams draws on four case studies to illustrate their destructive impact when they eclipse other points of view the metaphor of mental illness the metaphor of free flowing markets the metaphor of the mind as a mirror and the metaphor of men as naturally superior Taken together these examples prompt further reflection on the beneficiaries of these monster metaphors and how they promote such metaphors to serve their own interests but also on ways forward for challenging their dominance strategies for preventing their rise and ways of creating space for alternatives This book will be of interest to scholars interested in the study of metaphor across such fields as linguistics rhetoric and media studies
